DEARBORN.—Sources in the chemicals trade say Ford Motor Co. may be using plastic exterior panels on Taurus and Sable as early as the 1988 model year. The company does not use any exterior plastic sheet now. General Motors, of course, has the molded fiberglass Chevrolet Corvette and plastic-skinned Pontiac Fiero. Intro of Taurus/Sable, new as 1986 lines, has been delayed until mid-November.

Ford to build $200-million engine plant in U.K.

LONDON.—The announcement that Ford of Europe is to put $200 million into a new engine facility at Dagenham, England, is confirmation that an earlier plan to import the

Prices spiral upward as underwriters' shakeout continues

New dealer insurance market: Higher fees, fewer choices

By Richard Johnson
Detroit Reporter

Automobile dealers seeking property and casualty insurance have seen the market turn upside down during the past year, with premium rates skyrocketing, deductibles spiraling upward and availability of insurance becoming uncertain.

This is the first in a series of reports which will examine the state of the insurance market for dealers. Forthcoming stories will address steps dealers can take to control insurance expenses and discuss alternatives to conventional carrier coverage.

A general insurance industry shakeout is playing particular havoc with dealerships and other high-loss-exposure operations. According to some insurance business observers, the result will be a move toward self-insurance and other specialized insurance programs.

First of a Series

Several major companies have either substantially tightened the reins on dealer business or cut dealers out altogether. Some carriers are no longer writing policies for retailers of expensive imports.

Other insurance companies have gone broke, leaving dozens of auto dealers unprotected. When Ideal Mutual Insurance Co. was declared insolvent and ordered liquidated by the New York Insurance Department earlier this year, approximately 1,000 dealers were reportedly dumped onto the market.

"Last year was the worst ever in the history of the property and casualty business," said Shelly Barquist, vice president—marketing for Motors Insurance Corp., General Motors Acceptance Corp.'s insurance subsidiary. "There was a loss of $20 billion by companies at the underwriting level, most in the commercial end."

The industry turbulence follows years of rampant discounting among carriers, during which insurance professionals say premiums were held down artificially. Even with major price hikes in recent months, rates have not yet found their natural levels, according to several industry spokesmen.

Meanwhile, the investment returns that had been underwriting the underwriters dried up when interest rates plummeted. And with insurance profitability ebbing, investor funds into the industry have slowed, leaving insurers with less capacity.

"The industry is falling apart for auto dealers," said Roger Heckman, vice president, marketing and underwriting at Dealer Cover, Torrance, Calif. "The problem right now in dealer insurance is similar to the medical malpractice problem of the early 1970s. Since September, 1984, one pro-

Concessions could pave way for new Kenosha plant

Thinner AMC contract goes to vote

By Marjorie Sorge
Labor Editor

Some 7,000 of the 7,600 UAW-represented workers at American Motors' Wisconsin plants will vote this week on a three-year contract that grants the company concessions, saves the plants from closure and may pave the way for construction of a new assembly facility.

If the contract is ratified, it could be the first step toward building a new assembly plant in Kenosha.

The 7,000 Kenosha workers will vote Friday (June 12).

The contract also covers 600 workers at AMC's stamping operation in Milwaukee, members of Local 75. The Milwaukee workers voted last Saturday (July 6).

State and city officials have been waiting to see if the union and the company could reach a more competitive agreement before taking steps to plan for AMC's future in Wisconsin.

It now is possible that state and city governments may help provide a new assembly plant in Kenosha to replace the aging, multi-storied lakefront facility and may become involved in training programs and other state and city-aided programs. The age and the numerous stories in the plant make it difficult to create a cost-efficient operation in the future.

"The ball is in their court now," said Rudy Kuzel, president of Kenosha Local 72, indicating that the union has done what it can with the new agreement.

Kenosha Mayor John Bilotti has indicated that AMC would be welcome to land in an industrial park for a new plant.

Wisconsin Gov. Anthony S. Earl is also expecting to talk with AMC officials after the contract is ratified. Richard Calmes, AMC labor relations vice president, has told the governor he will meet with

Yabba-Dabba-Doo and Yogi, too

Fred Flintstone and Yogi Bear welcome visitors to the newly named Chrysler Grand Music Hall at the Great America Amusement Park in Santa Clara, Calif. Chrysler is sponsoring the Music Hall production of The Best of Broadway, featuring 30 singers and dancers. As part of the promotion, Chrysler-Plymouth and Dodge vehicles are on display throughout the park.

Fire probe requested on Chrysler K-cars

By Jake Kelderman
Washington Reporter

WASHINGTON.—Are Chrysler-built K-cars and other of its models fitted with carbureted engines prone to catching fire? The Center for Auto Safety, with reports of more than 500 occurrences in hand, thinks so and has asked NHTSA to open a formal defect investigation into the alleged problem.

The center also thinks the safety agency should order a recall of 2.5 million 1981-1984 K-cars (Aries/Reliant) and Omni/Horizon models for the alleged defect.

The latest request from the center follows six prior requests to NHTSA, made in 1983-1984, to look into the alleged problem. All those requests were denied although in November, 1984, the safety agency did open a "preliminary evaluation" of the alleged problem in K-cars with 2.2 or 2.6-liter engines.

In January of this year and twice in 1984, Chrysler recalled a total of approximately 500,000 cars with its 2.2-liter and 2.6-liter engines for fire-related defects.

Chrysler cited leaking gaskets, fuel-line cracking and bad hose clamps as possible causes, but it maintains in regard to the safety center's petition that it "is not aware of any pattern or any repetitive design/manufacturing potential defect that causes continuing concern for engine compartment fires on the subject vehicles."

Previously, NHTSA closed an investigation into alleged fire hazards in 1981 K-cars after no common cause among the alleged fires was identified.

Must stay in U.S., French maker says

Renault approves loans to AMC

By Jean-Jacques Renaux
Special Correspondent

PARIS.—Renault chief Georges Besse expects Aerican Motors to report a loss this year and in 1986, too, but said Renault intends to support its U.S. affiliate financially.

The decision was approved by Renault's board during a June 25 meeting. Proceedings were revealed by the Communist union CGT a few days later. Besse confirmed the report last week during an informal meeting with the press, the first since he took Renault's reins six months ago.

Renault did not confirm the figure quoted by the union, but it did confirm it will help AMC with loans through 1987. The union said the new loans would total $175 million.

AMC will have heavy costs through 1987 as it expands its product lineup. In the 1987 model year it will import a new compact sedan from France, and in the 1988 model year, it will launch a Canadian-made intermediate.

Renault noted AMC's current losses are small compared with most of the Renault group's other activities. It said it has to stay in the U.S.

If Renault considered a retreat from the U.S., as rumors had suggested, it seems it has now made up its mind to stay, and has the approval of the French government, Renault's sole shareholder.

In Europe, Renault hopes to improve its market performance by next year with the replacement for the 18 model. A company spokesman said Renault hopes to improve it market share by about one percentage point, raising it to 11.8 percent.

Renault based its three-year recovery strategy on lower market shares, however: 11 percent in Europe and 31 percent in France. Using these conservative figures, Renault will attempt to lower its production capacity and its breakeven point.

Renault intends to improve its productivity by some 30 percent to average 14 cars per worker per year, compared with the current average of 10.9.

The objective is to get productivity better than its competitors, according to a company official. It probably will achieve these increases in unspectacular ways, managers said. They avoided comments on suggestions that Renault would have to close any plants.

Besse was in Japan two months ago, visiting Toyota and Nissan. There is no plan for cooperation with the Japanese on components or car manufacturing, Renault said.

Currently some 25 percent of Renault's sales are in inventories, from suppliers to dealers. This compares with 13 to 14 percent at Fiat and a high of 7 percent in Japan, Renault said.

The company wants to get a spectacular improvement first in its inventories of finished cars. Adopting just-in-time in-process inventory systems will take several years, however.

Autumn decision due on U.S. Toyota plant

TOKYO.—Toyota Motor Corp. will build a plant in the U.S. by the middle of 1988, according to a report published here by a financial newspaper.

A Toyota source said a decision to build a new plant, which would cost some $800 million, could be announced here in autumn when Toyota meets with its U.S. dealers. If the decision is not reached by that time, the source indicated, it may be some time before the company is ready to make an announcement.

The dealers' visit will coincide with the Tokyo Motor Show, Oct. 30-Nov. 11.

Honda's recent decision to build engines in the U.S. reportedly has spurred Toyota management into accelerating the decision-making process on a U.S. plant.

Initial annual production would be 200,000 cars, based on the Mark II model and featuring engine displacements of 2.0 and 2.6 liters, the report said.

It added that in a second phase, production would include newly developed cars with engine displacements of 3.0 to 4.0 liters.

However, a Toyota spokesman labeled "completely ungrounded" the story in Nihon Keizai Shimbun. He said Toyota has received complaints from its dealers in the U.S. about the shortage of cars and said that the company "must do something to solve the problem."

He said Toyota is studying the situation, and he acknowledged that one solution would be for the company to construct a plant in the U.S. However, he emphasized that "the study has not yet progressed to that point."

The report by Nihon Keizai Shimbun said the Toyota facility would be located in the Midwest.

The second-phase cars to be developed and produced by Toyota are expected to enter into head-on competition with Chrysler Corp., Ford Motor Co. and General Motors.

The move is said to be designed to fend off U.S. criticism of Japan's huge trade surpluses. Toyota currently produces small cars in California in a joint venture with GM, with the entire supply going to GM. There have been reports that the California plant, in addition to building for GM, will begin to supply Toyota dealers with cars this fall at a rate of 50,000 units per year.

Early sellout expected for NADA show space

WASHINGTON.—NADA will have more exhibit space at next February's convention in New Orleans than it had last January in San Francisco, "but we still expect to sell out before September," according to Frank England, convention committee chairman.

The 1986 NADA convention is scheduled for Feb. 1-4 at the New Orleans Convention Center.

Contracts have been mailed to firms that exhibited at the San Francisco convention. This week, forms will be mailed to all other companies that have expressed an interest in exhibiting at the New Orleans meeting.

A year ago, all available exhibit space was sold out within a few weeks after the initial mailing. A waiting list was developed, and it grew to more than 130 firms.

The NADA exposition offers a full range of products and services needed by auto dealers.

In addition to auto manufacturers, exhibitors include companies that sell computers, financial and business management systems, van conversions, diagnostic test equipment, warranties and insurance, aftermarket products and frame-straightening, brake and alignment equipment.

England said the 820,000-square-foot New Orleans Convention Center will accommodate all of the convention's exhibits, workshops and general sessions in a single building. The Convention Center opened in January, 1985, after a year's service as the principal building for the 1984 World's Fair,

"Our convention has grown so

Luxury plus utility

Broadway AMC-Jeep-Renault, Inc., Littleton, Colo., will exclusively sell this first line of custom-built, four-wheel-drive Grand Wagoneer limousines. DaBryan Coach Builders, Springfield, Mo., is building the vehicles. Interior appointments include dark tinted windows, stereo system, TV, bar, ice compartment with built-in drainage, automatic window and solid partition between the driver's section and the rear compartment.

Record number of vehicles built in Spain

But only one maker—Ford—showed a profit in 1984

By Richard Feast
European Editor

Spain assembled a record number of passenger cars last year—almost 1.2 million, which ranks it No. 6 in the world and fourth in Europe. It amounted to a volume increase of more than 3 percent.

At the same time, its exports went up nearly 12 percent to 715,600. That meant the country exported 61 percent of all the cars it made. It is the sort of level one associates with exporters like Japan and West Germany.

On the face of it, then, it was a good year for the Spanish industry. However executives at the recent Barcelona auto show did not see it that way. Of the country's six manufacturers, only one—Ford—is profitable. The market never seems to live up to the cautious optimism expressed for it. Last year was typical; growth of about 5 percent was forecast, but demand contracted by that amount.

Overriding all problems is the one which affects so much of the rest of Europe—over-capacity. In Spain's record year, it still had something like 35 percent more car-making ability than the world could absorb. Five years ago, Renault built 110,000 more cars than it did last year. Ten years ago Seat's output was 100,000 more than it was in 1984. In total, it is estimated that Spain's factories could turn out 1.6 million cars a year.

"The fact of the matter is that the European market is declining," comments Dr. Horst W. Herke, chairman and managing director of GM-Espana. "And a great percentage of sales are subject to some sort of promotion."

His counterpart at Ford-Espana, Managing Director Patrick P. Byrne, agrees. Exports to the rest of Europe are the key, "because domestic business is not that interesting at present."

Last year total Spanish registrations amounted to 493,900, of which all but 8.7 percent were domestically produced. This year the figure may go up to about 510,000, though in the late '70s the total was in excess of 600,000. "Everybody has got their industry forecasts for Spain wrong, and certainly we're not expecting as much growth as we originally were," explains Byrne.

The industry believes it is well prepared for Spain's entry into the European Economic Community, in January next year. It is already a strong exporter, as companies like Renault, Peugeot group, Ford and GM-Opel take advantage of the comparatively low labor costs in Spain. Seat, the other domestic manufacturer, is expected shortly to reveal closer links with the Volkswagen group, for which it already assembles some cars in Spain.

On the other hand, the 36.7 percent tariffs imposed on imports will be only gradually reduced over an eight-year period. It will give better access for expensive car makers like Daimler-Benz, BMW and Volvo. Importantly, it will eventually enable Fiat, the only major European now without a manufacturing presence in Spain, to price its products more competitively.

The government's "White Book"—a concept rather than a printed document—embraces the idea of Spain as builder of Europe's small cars. It has to keep a close watch on how the industry develops, because its health affects up to 12 percent of Spanish wages.

It identifies low labor costs in the country. Seat puts them as much as 50 percent below those of its VW partner. Others, like Ford and GM, believe 30 percent is more realistic. But given that labor costs account for a quarter of the ex-factory price, the savings possible are too hard to ignore, especially when building price-sensitive small cars.

At the same time, Spain's demand is largely for small cars; its best sellers last year were Renault 11, Renault 9, Opel Corsa, Peugeot 205, Ford Fiesta, Renault 5, and so on. In addition to the local market requirement, neighboring countries like France and Italy have similar buying patterns. Exports are therefore easier than they are to, for example, Sweden or Austria.

Renault and Peugeot's Citroen and Talbot factories are fully integrated within the parent groups' European supply system. A French buyer of a Renault 5 or Peugeot 205 could unwittingly be getting a Spanish-built car. However, Renault's French problems mean it is sourcing more of its European requirements from France rather than from Spain. It explains the substantial drop in Spanish Renault output last year.

When GM went into Spain at the beginning of this decade, it was followig the Ford principle established a few years earlier. It is about to take a step further towards the Ford pattern.

Ford's Valencia factory was built to supply most of Europe's needs with the small Fiesta. Only later did it add Escort and Orion, and then mainly to provide a broader model offering for its Spanish dealers. Similarly, GM's Zaragoza unit is the sole source of the Opel Corsa/Vauxhall Nova in Europe. Now the company has a plan to add the Kadett/Astra line next year—because, according to marketing director Eddy van Loo, it can see no growth in its Spanish market share with a limited model range based on Corsa.

Seat, too, is assembling small cars for Europe—VW Polos and Classics. They are sold through the European VW dealer network. There seems little doubt that Seat would like to do the entire job for VW, but employment considerations in Wolfsburg make it a sensitive issue. Under its old agreement with Fiat Auto, Seat is still assembling Pandas that will be retailed by Fiat.

Thus the importance of Spain as Europe's small-car producer is already evident. It is likely to grow more so—and not just through existing manufacturers.

Nissan, which now controls 85 percent of Motor Iberica, and Suzuki, whose four-wheel-drives are manufactured by Santana, may over the longer term become European passenger car producers. Nissan has now abandoned the stance that Motor Iberica is simply to assemble Patrol 4x4s and Vanette commercial vehicles; the prospect of car assembly is now being more openly discussed. And at Santana (49 percent owned by Britain's Land Rover) the aim is 85 percent local content for the Suzuki by the end of the year. It would make the fashionable SJ, now going into production, an attractive export proposition.

On the domestic market front, the underlying optimism about growth remains. Spain, points out a GM official, is a country of 37 million people and annual car sales of about half a million. It has one of the lowest car densities in Europe, and, unlike countries like Holland or the UK, it has the physical size to accommodate more vehicles. The proportion of young people is high, suggesting that car buying is set to increase over the years. The imminent membership in the EEC is expected to be a further sales stimulus, as previously unseen makes and models create interest in personal transport.

On the other hand, unemployment remains high and purchasing power is slipping. Business confidence remains low. The country's infrastructure requires more development. There is uncertainty over how consumers will react in the final months of this year, as the country adopts value-added tax on goods, as required by the EEC.

The industry is campaigning hard for lower taxes on cars, fuel and highway tolls. It would also like to see the adoption of an annual safety check similar to those existing in other European countries. The proportion of clunkers on the road is perhaps higher than anywhere in Europe. The annual test could dispatch one million to the scrap yards, and give the new car market some oxygen.

A worker checks data at the vehicle emissions test laboratory at GM's new European technical center in Luxembourg.

GM dedicates tech center

Strategically located in Luxembourg

By Richard Feast
European Editor

General Motors' technical center in Luxembourg—officially dedicated May 30—is part of a bid to win more European customers for the corporation's automotive component divisions. Today, those European customers number "at least six" outside the GM fold.

"We do not have a guaranteed customer within GM," says a GM manager. "Our objective is to sell to other car makers."

The simple location of the GM facility is an indication of its international approach. Luxembourg is neutral territory, and thus removed from Adam Opel in West Germany, Vauxhall Motors and Bedford in the U.K. But it is geographically near to them, and to Europe's other vehicle makers.

The center is the development, testing and applications laboratory of the Automotive Systems Engineering Group (ASEG). This is supported by GM's Electrical Components Division under vice president Edward P. Czapor, who was on hand for the formal ceremonies at the end of May. The event was also attended by Prince Henri and Princess Teresa of Luxembourg.

Divisions involved in ASEG are AC Spark Plug, Delco Electronics, Delco Products, Delco Remy and Rochester Products. GM says the center's mission is to serve as a single source for vehicle systems for European makers. This embraces engine management, emission controls, transmission management, ignition, fuel injection, ride control, instrumentation and climate control.

The center is staffed by 54 people from eight countries under manager Klaus J. Ness. At present the personnel are under U.S. management control, but over the next three years Europeans will gradually take their place.

The center covers nearly 65,000 square feet. It is located in the community of Bascharage, about nine miles from the city of Luxembourg. Among its facilities are emission testing equipment, engine and chassis dynamometers, engineering garage, fuel analysis lab, support computers, component test stands and electronics lab.

Czapor estimates that between 15 and 20 percent of the Electrical Components Group's annual sales ($11.4 billion last year) are with outside companies. It includes $17 million worth of business with Japanese companies—and not just Isuzu and Suzuki. "If we can sell to Japan we can sell all over the world," comments Czapor.

Talk at the opening concentrated on the developments which are being worked on for inclusion in future products. Among them are multiplex wiring (a first application on the Cadillac Allante), TV screen to call up controls (1986 Buick Riviera), aircraft-style head-up display (expected in two years) and cassette-less in-car entertainment in which the music is stored on super-chips (due in the 1990s).

Excalibur returns to European market

First showroom established on the beach at Monte Carlo

By Richard Johnson
Detroit Reporter

After several years' absence, Excalibur Automobile Corp., Milwaukee, is establishing a new beachhead in Europe—on the beach at Monte Carlo, to be exact.

Excalibur Motor Car Distributors, a distributorship founded by Neil Van Luven, was due to open a showroom in Monte Carlo in late June, according to William Stevens, executive vice president of the neoclassic-car maker.

Stevens said Van Luven, in association with others, will also set up showrooms in London and Geneva before spring.

Excalibur once had sales centers in Rome and Monte Carlo but has been out of Europe for five years. Excalibur has a distributorship in Tokyo, where the company sells about half a dozen cars a year, Stevens said.

The new European distributor will market high-performance versions of the Phaeton and Roadster models sold in the U.S.

Stevens said the European Excaliburs will be powered by a 350-CID, 300-HP engine. Engine and some chassis modifications will be made in the U.S. Prices for the European models have not been set.

He said the company is projecting 20 sales a year out of the Monte Carlo showroom. Within "a couple of years," sales should reach 36 cars annually from the European distribution points, he said.

The distributor will have rights to the Middle East market. Stevens said it is easier to sell to wealthy Middle-Easterners in Europe than on their home turf.

"When they are traveling in Monte Carlo or London, they are in a buying mood," he said. "They have a whole different state of mind. It is the same as Florida dealers who do well with buyers on vacation from the East and Midwest."

Sales operations at the new distributorship are headed by Dan Brush, who directed Excalibur's West Coast sales for eight years.

Excalibur has been promoted in Europe via the Professional Golfers Assn. The neoclassics are being given as prizes in hole-in-one contests on the European tour. Stevens said six have already been awarded.

Nissan's list

Mexico is second

MEXICO CITY.—Mexico has proved to be the second-best country (after the U.S.) outside Japan for Nissan, according to Soichi Amemiya, who was director of Nissan de Mexico for nine years.

Nissan's investment in Mexico is about $400 million, and Nissan de Mexico now produces 72,000 cars annually, with 7,000 for export, he said.

Amemiya said the company will not use robots to assemble automobiles in Mexico in the near future, since there is a qualified, cheap labor force available. Amemiya recently assumed planning duties in Japan.

Ontario OK's arbitration

Plan designed to settle consumer complaints

TORONTO.—The Ontario Motor Vehicle Arbitration plan (OMVAP) has been announced by the Ministry of Consumer and Commercial Relations.

The program is designed to provide qualified, independent arbitrators to settle consumer disputes arising from alleged manufacturing defects in new vehicles sold in Ontario.

OMVAP will begin Jan. 1, 1986. It will oversee arbitration plans covering most new cars and light-duty trucks sold in Ontario, at no cost to consumers.

Representatives of several business and consumer groups and of the ministry will serve on the board of directors of the incorporated, nonprofit organization. The ministry will designate a chairperson.

OMVAP will accredit organizations used by the auto companies to provide arbitration programs. It will also select and train qualified arbitrators and maintain a master list of those arbitrators, which will be used by all authorized arbitration carriers in Ontario.

Consumer Minister Robert Runciman said, "These arbitration programs will provide Ontarians with fast, independent, uniform and high-quality arbitration as an alternative to seeking a court-ordered settlement of disputes."

The arbitrators' decisions will be binding on both parties.

A vehicle owner may bring to arbitration any matter that relates to an alleged defect in original manufacture and that seriously affects the safety or resale value of a vehicle sold and registered in Ontario.

Before entering into arbitration, consumers will be required to follow the manufacturer's complaint resolution procedure.

In agreeing to abide by the arbitrator's decision, consumers also agree to discontinue or forego litigation.

Each auto maker will decide on the duration of the arbitration coverage offered on their vehicles. Existing programs of coverage will carry over into the new plan.

The arbitration process has been designed to be quick and informal; lawyers are not an essential part of the hearing.

OMVAP was developed following research into so-called lemon laws now in effect in some states. It was determined that those laws provide inadequate protection for the consumer unless backed up by arbitration.

Therefore, the decision was made in Ontario to develop an arbitration plan that would provide consumer protection without the need for legislation.

Income rises

Mazda reports gain

OSHIMA, Japan.—Mazda Motor Corp. announced a 28-percent increase in income on higher sales for the first six months of fiscal 1985, ended April 30.

Net income totaled 15,186 million yen, or $60.2 million based on exchange rates at the end of the reporting period, up 27.5 percent from the 11,913 million yen earned in the first six months of 1984.

Revenues totaled 755,966 million yen, or $2.996 billion, up 6.3 percent from the previous year.

Mazda attributed its improved financial performance to increased sales and an upgraded model mix.

Vehicle production for the six months was 653,374 units, including 90,022 KD sets.

Factory sales including KD sets were 657,208, up 0.4 percent from a year ago. Passenger-car sales were down 2.8 percent to 427,408 units while commercial vehicle sales were up 6.9 percent to 229,800 units.

Domestic passenger-car sales were up 6 percent. Passenger-car sales dropped 5.7 percent overseas.

Mazda's cash and cash equivalents amounted to $744.7 million at the end of the fiscal period.

Imports up more than domestics

Sales rise 2 pct. for first half

Continued from Page 1

down 3.25 percent from 2,518,156 a year earlier. American Motors was down 35.14 percent, to 62,430 from 96,256. Volkswagen Golf sales were off 8.97 percent, to 39,962 from 43,901.

GM forfeited almost three percentage points from its share of the first-half domestic market, dropping to 56.46 percent from 59.30 percent. Ford was up to 25.07 percent from 23.77 percent. Chrysler just missed 14 percent, rising to 13.99 percent from 12.08 percent.

AMC plunged to 1.45 percent from 2.27 percent and yielded its fourth-place position to Honda, which expanded to 1.93 percent from 1.55 percent. VW dipped to 0.93 percent from 1.03 percent, and Nissan cornered 0.17 percent of the 1985 first half.

At Chrysler Corp., Dodge first-half sales were up 19.72 percent, Chrysler was up 16.51 percent and Plymouth climbed 16.30 percent.

All Ford Motor Co. makes posted gains for the period: Ford was up 10.20 percent, Mercury was up 1.08 percent and Lincoln was up 2.94 percent.

At GM, Pontiac was the only make to finish ahead of its 1984 total, with sales of 410,923 up 8.01 percent from 380,449. Chevrolet was down 3.45 percent, Oldsmobile was down 6.05 percent, Buick dropped 5.94 percent and Cadillac was down 9.80 percent.

AMC Eagle sales dropped 47.57 percent for the first half, Renault was down 33.59 percent, VW slumped 8.97 percent, while Honda was 26.47 percent ahead of its 1984 pace. Nissan sales of U.S.-built Sentras were on the books for the first time in 1985 and scribbled the number 7,287 in the first-half column.

There were 153 selling days the first half of 1985, yielding a daily average of 28,200, up 2.27 percent from 27,574 from 154 selling days a year earlier.

First-half import sales included records for BMW, up 14.63 percent to 42,351 from 36,945 last year; Jaguar, up 5.05 percent to 9,322 from 8,874; Mercedes, up 8.32 percent to 43,899 from 40,526, and Saab, up 11.89 percent, to 20,300 from 18,143. Volvo was up 0.99 percent to a record 57,580 from 57,014.

Other first-half comparisons included: Audi, off 6.91 percent; Honda, up 3.56 percent; Isuzu, up 46.20 percent; Mazda, up 5.27 percent and Mitsubishi, up 11.73 percent.

Nissan imports were up 2.89 percent, Peugeot dropped 21.44 percent, Porsche was down 2.91 percent, Renault plunged 34.46 percent, Subaru was off 0.06 percent, Toyota was up 5.37 percent and VW was up 14.30 percent.

June domestic sales were down 6.97 percent, to 676,675 from 727,370 in 1984. Every maker except Honda reported a sales drop for the month, and Honda was up only 0.78 percent, to 12,141 from 12,047. June and February were the two months of decline thus far in 1985.

GM skidded 9.29 percent for the month, down to 381,471 from 420,527. Ford was down 2.86 percent, to 174,075 from 179,196. Chrysler sales dropped 2.42 percent, to 90,065 from 92,301. AMC sales of 9,066 were down 45.71 percent from 16,700 while VW reported a decline of 7.59 percent, to 6,098 from 6,599. Nissan sales in June totaled 3,759.

GM's share of the June market dropped to 56.37 percent from 57.81 percent. Ford was up to 25.73 percent from 24.64 percent. Chrysler moved up to 13.31 percent from 12.69 percent. Honda had 1.79 percent, up from 1.66 percent.

VW slipped to 0.90 percent from 0.91 percent and AMC tumbled to 1.34 percent from 2.29 percent. Nissan earned 0.56 percent this year, its first June on the domestic market.

The daily selling rate was off 3.25 percent in June, to 27,067 from 27,976. There were 25 days this year compared with 26 selling days in 1984.

Ford, Chrysler and Honda were the only domestic makes with improved sales June to June. Ford was up 0.68 percent, Chrysler charged ahead 22.89 percent and Honda was up 0.78 percent.

Combined import and domestic sales for the month were off 2.82 percent, to 925,334 from 952,214. Imports earned 26.87 percent of the market; U.S. intermediates had 27.56 percent; compacts were 14.71 percent; subcompacts had 12.83 percent; standards were 9.76 percent, and luxury cars had 8.27 percent of the June total.

Excluding imports, the market class breakdown featured: Intermediates at 37.69 percent, compacts at 20.11 percent, subcompacts at 17.54 percent, standards at 13.35 percent and luxuries at 11.31 percent.

Import sales in June achieved a record total of 248,659 which included individual records for BMW, Mercedes, Saab and Volvo. Honda sales were up 18.51 percent, Isuzu was up 57.30 percent, Mazda was up 13.72 percent, Mitsubishi was up 61.72 percent, Nissan was up 15.25 percent and Toyota dropped 9.87 percent. Volkswagen reported a June imports sales increase of 38.73 percent.

The final June period was marred by a 21.78-percent drop for the domestics, which together plunged to 219,621 from 280,764 last year. On a daily-rate basis the decline was less precipitous, down 12.00 percent. With eight days this year the daily average figured to 27,453 compared with 31,196 from nine days in 1984.

GM was down 24.48 percent, Ford was off 18.34 percent, Chrysler dropped 17.93 percent, AMC was down 54.04 percent, VW dropped 11.32 percent and Honda was up 0.05 percent.

The market was divided in this manner: GM had 53.67 percent, Ford had 25.91 percent, Chrysler had 13.64 percent, AMC had 1.85 percent, VW had 1.34 percent, Honda had 2.56 percent and Nissan had 1.03 percent.

Second-quarter domestic sales were up 0.92 percent, to 2,272,546 from 2,251,734.

Where auto market was, June, 1985

But holiday-week's build dives to 81,536

Best half since '79 for auto makers

By Louise Kertesz
Detroit Reporter

U.S. auto makers produced 4,411,200 units during the first half of this year, according to adjusted figures based on totals released by the manufacturers.

It was the best six months' production since the first half of 1979, when 4,900,546 cars were assembled.

This year's first half was up 4.55 percent from the 4,219,225 total for the year-ago period.

Second-quarter production of 2,226,923 cars was up 7.60 percent from 2,069,560 in the second quarter of 1984. It was the best output for the period since 1979. It was also the highest quarterly output since the first three months of that year.

Production for the Fourth of July holiday week was unusually low, not only because no Saturday overtime was scheduled but also because many plants were idle for the entire week.

As reported earlier, plants of Ford Motor Co. and Nissan Motor Mfg. Co., U.S.A., were down last week for vacation. American Motors' Kenosha facility was closed for inventory adjustment, and VWoA's Westmoreland (Pa.) plant was idled by a parts shortage.

Ford, Nissan and VWoA are closed this week also, with production scheduled to resume July 15.

Last week's 81,536-unit build, the lowest for any week this year, plummeted 51.93 percent from the previous week's 169,626 and was 14.19 percent below the 95,018 for the year-ago week.

So far this year, 4,488,142 cars have been assembled, 3.09 percent more than the 4,353,755 completed last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 69.67 percent; Chrysler Corp., 26.86 percent; Honda of America Mfg. Co., 2.27 percent, and New United Motor Mfg. Co., 1.20 percent.

Chrysler has scheduled two nine-hour daily shifts this week (July 8) at its plants in Belvidere, Ill., and St. Louis (Nos. 1 and 2).

Bendix restraints division adding plant in Mexico

MOUNT CLEMENS, Mich.—The Bendix Safety Restraints Division of Allied Automotive is adding a production facility in Mexico and restructuring its U.S. manufacturing operations to accommodate new and anticipated production orders.

The new and anticipated business includes orders for the division's advanced passive-restraint systems developed to comply with federal passive-restraint legislation, which mandates the gradual introduction of such systems beginning in 1987, according to Robert L. Cox, vice president and division manager.

The new facility will be located in a 75,000-square-foot leased structure in Agua Prieta, Mexico. Production is expected to begin at the new Mexican facility this fall. Initial employment will be about 345—45 salary and 300 hourly.

Assembly operations of several lines of passenger-car and light-truck seat-belt systems will be moved to Mexico from the division's Greenville (Ala.) facility to make room at Greenville for passive-restraint system production, said Cox.

Federal legislation mandates that 10 percent of all new cars must have passive restraints in the front seats by 1987, 25 percent by 1988, 40 percent by 1989 and 100 percent by 1990. The ruling will be rescinded if states with two-thirds of the nation's population have mandatory seat-belt-use laws meeting federal standards on or before April 1, 1989.

The restructuring also will make room for expanded production of current seat-belt models to meet additional 1986 orders.

Truck production for first half is best in 6 years

Domestic truck production of 1,785,992 units for the first half of 1985 was the best six-month build since the same period of 1979, when 1,891,166 trucks were assembled, according to adjusted figures based on company totals.

First-half production this year was up 8.54 percent from 1,645,455 for the year-ago period.

Second-quarter production of 920,696 trucks was the best output of any quarter since the first three months of 1979, when 1,003,218 trucks were completed.

Output for the second quarter was 10.05 percent better than the 836,603 total for the same period in 1984.

With plants of Ford Motor Co., International Harvester and Nissan Motor Mfg. Co., U.S.A., closed for vacation—and with the build cut by the Fourth of July holiday—truck output last week was the lowest of any week this year.

Makers scheduled assembly of 26,807 trucks last week, 59.66 percent fewer than the previous week's 86,547, but about the same (down 0.13 percent) as the year-ago week's 26,842.

Year-to-date, 1,813,128 trucks have been assembled, 9.82 percent more than the 1,650,988 completed last year at this point.

Ford, International Harvester and Nissan plants remain closed this week. Production is scheduled to resume at these facilities on July 15.

Canada posts best half ever for truck output

Canadian truck manufacturers had their best six months' production ever during the first half of this year as they built 460,900 units.

The first-half total topped the 439,267 for the same period of 1984, which had been the previous record six-month output.

Second-quarter truck production of 233,074 units was also the top quarter ever for the manufacturers, surpassing by 4.19 percent the previous record quarter—223,692 for the same period of 1984.

Last week's truck build of 11,902 units—cut by the Canada Day holiday and plant closings for vacation—was down 30.66 percent from the previous week's 17,165 but was 6.66 percent better than the year-ago week's 11,159.

So far this year, 472,841 trucks have been completed, 5.88 percent more than the 446,588 built last year at this time.

Ford Motor Co. and International Harvester plants remain closed for their second week of vacation this week. They are scheduled to reopen July 15.

Canadian car production of 547,461 for the first half of this year was down 8.41 percent from the year-ago period's 597,708.

Second-quarter output of 302,897, though up 23.85 percent from the first quarter's 244,564, lagged 2.42 percent behind the 310,399 for the same period last year.

Last week's car production of 15,563 units was 31.60 percent less than the previous week's 22,754 but 15.56 percent more than the year-ago week's 13,467.

Year-to-date, 561,246 cars have been assembled, 7.18 percent fewer than the 604,683 completed last year at this point.

American Motors' Brampton (Ont.) plant remains closed for vacation and changeover. It is scheduled to reopen Aug. 5.

60th year—$45 per year, $1.00 per copy

170 auto leaders average $579,928 for 1984

Executive pay up 15 pct.

By Michelle Krebs
Financial Editor

A record year of profits for the automotive industry spelled a record year of salaries for the executives of automotive and supplier companies.

The annual Automotive News survey of the executives of publicly traded companies who make more than $300,000 in combined salary and bonus showed the average compensation in 1984 amounted to $579,928, up 15 percent from 1983's $505,814. In 1982, the average was $400,000.

The combined compensation of the 170 executives on the 1984 list amounted to almost $100 million, up from 1983's $87 million for 172 executives, according to the survey compiled from company proxy statements which list only the five top-paid executives.

The number of executives who made more than $1 million in salary and bonus doubled to 12 in 1984 from six in 1983.

Philip Caldwell, Ford Motor Co. chairman during 1984, held the No. 1 spot for the second consecutive year with a combined salary and bonus of $1.58 million. Caldwell retired from Ford in February.

The average raise for top executives amounted to 23 percent last year. The average increase in 1983 from 1982—a recession year in which salaries rose little or not at all—was 40 percent.

Chrysler Corp. executives enjoyed the largest increases in compensation. Chrysler's top four executives showed increases in bonuses and salaries of about 150 percent each. However, Chrysler's proxy statement in 1983 listed only salaries; bonuses for 1983 were not revealed until 1984's proxy statement.

Nevertheless, Chrysler Chairman Lee A. Iacocca, who had a 151-percent increase in salary and bonus, bumped General Motors Chairman Roger B. Smith from the No. 4 spot to No. 7.

Increases in 1984 were not as

Shop volume has 2nd best gain of 1985

By Jack Walsh
Service Editor

Service and parts gains in the nation's franchised auto dealerships were down in May from the previous month, but the rate of growth over the same month in 1984 was the second-highest of the year.

Special Service Section Starts on Page E-1 following Page 26.

Volume during the month, according to the Automotive News Service Index, was 13.5 percent higher than in May a year ago, with sales of parts to outside customers the strongest of the six indicators used in the survey.

The April rate of growth over the same month in 1984 was 18.6 percent, the greatest increase in 14 months.

In May, parts sold to other dealer and independent shops showed a gain of 28.3 percent over last year. Total labor sales, customer-paid and warranty, were up 13.9 percent from the year earlier.

Gross profit during the month on all labor, parts and accessory volume—the most important indicator from the dealers' view—increased 10.8 percent over a year ago.

There was an increase of 8.7

★—Survey by Automotive News shows that dealers' service and parts business in May, 1985, was 113.5 percent of business in May, 1984. Service business in the first five months of 1985 was 110.4 percent of business in the corresponding period in 1984.

New plant, new car

Joe Wissers

'86 Toronado steps out

The redesigned Oldsmobile Toronado is one of the lines that will be produced at General Motors' new Poletown assembly plant on the Detroit-Hamtramck border. The plant, which begins production for the 1986 model year, also will build Buick Riviera, Cadillac Eldorado and Cadillac Seville.

Several key decisions must be made

Toyota strategies for U.S. plant

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—The current flurry of speculation about a U.S. assembly plant for Toyota underscores the important decisions that face the leading import nameplate in this market.

News Analysis

The decisions include how much of the company's product line will be built in the U.S., where those vehicles will be produced and how much those investments will cost in the long run if there is a dramatic downturn in sales and a return to price competition among the imports.

Basically, there are two strategies Toyota can employ. It can add a second line at the New United Motor Mfg., Inc., plant in Fremont, Calif., to produce a Corolla-class vehicle for U.S. distribution, or it can choose a greenfield site to construct a new plant.

A third, and possibly most likely scenario, would find Toyota doing both.

• The linchpin is the recently completed labor agreement between NUMMI and the UAW. By having an agreement that Toyota can live with in the U.S., the door is open for an assembly plant elsewhere.

Sources contacted by Automotive News indicate that some sort of decision has been made regarding the greenfield site, but that only a select number of top Toyota officials in the U.S. know what it entails and they're not talking.

It is believed that the company will try to play it close to the vest as long as possible, and some maintain that the announcement will be made to the dealers first during a trip to Japan in the fall.

However, if the plant is to be operational by 1988, one source said, a lot of work has to be done in the upcoming months and it will be difficult to keep that activity under wraps. If that is the case, the announcement may be made by the parent company sooner than originally planned.

News reports have identified potential plant sites as Kansas City; Nashville; Kentucky, and Indiana.

Sources indicate that a Tennessee plant is unlikely since rival Nissan already has a facility in Smyrna.

More than a year ago, reports surfaced that Toyota was eying Kansas City, Kans., as a possible home for a U.S. plant, and it's likely that the company will select a Midwest base for the project since that is one region were local production may help boost sales penetration.

Other signs seem to indicate that the product may very well be the next generation Camry, if Toyota decides to go ahead with

U.S.-car supply rises to four-month high

By Kathleen Hamilton
Assistant Managing Editor

Inventories of new domestic cars climbed last month, and slower sales aggravated the situation a bit. July opened with 1,576,762 cars in dealer and factory inventories, more than on June 1 but fewer than on May 1.

The July 1 stockpile was enough for 58 sales days, the highest days-supply number in four months.

On June 1, there were 1,546,188 cars in stock, or 50 days' worth. The July 1, 1984, stockpile was 1,445,799 cars, good for 52 days.

Almost all the increases among the nameplates' days-supply figures were due to slower sales. Production in most cases was cut—just not enough to offset the sales drops. Nevertheless, the 58-day average for the industry remained within the ideal range.

July 1 figures showed 28 nameplates with significant increases in their days-supply numbers and only five with substantial decreases.

Two of the five were Lincolns: Continental and Mark VII both saw little change in production levels but significant sales increases. Two others were Mercurys: Marquis sales were steady, but production dropped. Sales of Grand Marquis rose during its second month of production downtime for changeover to a new plant.

The fifth exception to the industry trend was the Chrysler Fifth Avenue. The drop in its days-supply figure was due to a sales increase coupled with a decrease in production.

The increases in the days-supply figures for the subcompact and compact segments may be partially explained by expiration of incentives on those models.

Inventories were divided this way on July 1: Subcompact, 18.18 percent; compact, 21.60 percent; intermediate, 33.34 percent; standard, 13.93 percent, and luxury, 12.95 percent.

One month earlier the split was subcompact, 17.40 percent; compact, 19.85 percent; intermediate, 34.92 pecent; standard, 14.77 percent, and luxury, 13.06 percent.

July 1 inventories were divided this way by company: American Motors, 2.71 percent; Chrysler Corp., 17.75 percent; Ford Motor Co., 25.27 percent; General Motors, 52.66 percent; Volkswagen, 1.12 percent; Honda, 0.29 percent, and Nissan, 0.20 percent.

The month-earlier split: AMC, 2.81 percent; Chrysler, 15.62 percent; Ford, 27.76 percent, GM, 52.30 percent; VW, 0.98 percent; Honda, 0.45 percent, and Nissan, 0.08 percent.

Domestic models and their July 1 days' supplies:

Subcompact—Alliance, 114; Encore, 102; Laser, 85; Omni, 82; Chevette, 81; Daytona, 76; Charger, 75; Fiero, 74; Horizon, 73; Golf, 73; Nova, 72; EXP, 65; Lynx, 62; Turismo, 62; Pontiac 1000, 53; Escort, 48; Nissan Sentra, 21, and Honda Accord, 9.

Compact—Eagle, 231; Aries, 100; Reliant, 98; LeBaron, 94; Cimarron, 85; Camaro, 68; Firenza,

breaking news

AMC sets tentative 1986 prices

SOUTHFIELD, Mich.—American Motors has issued tentative prices on its 1986 models, authorized selling before the official Oct. 1 introduction date and reduced its dealer discount on base models from 10 percent to 9. Average-equipped Renaults will increase $54, or 0.7 percent, although base prices on all but two Renault models drop. Average-equipped Jeeps and Eagles increase $324, or 2.1 percent. The new Jeep Comanche pickup is tentatively priced at $7,049 for the 2WD version, $8,699 for the 4WD.

New incentives offered on Aries, Reliant

DETROIT.—Chrysler Corp. last week launched the Reliant/Aries Saver's Choice program, which offers buyers of 1984 and 1985 K-cars a $400 savings allowance or 8.8 percent Chrysler

For dealers, top management

Dedeurwaerder maps AMC survival plan

By Richard Johnson
Detroit Reporter

American Motors will report a bigger loss in the second quarter than its $29 million first-quarter deficit, according to Jose Dedeurwaerder, AMC president and chief executive officer.

But Dedeurwaerder told AMC/Renault/Jeep dealers and top management at a special, unpublicized gathering in Dearborn last week that the company is on the high road to profitability.

During an interview with Automotive News sandwiched between the meetings in Dearborn, Dedeurwaerder also said:

1. U.S. introduction of the highly touted Renault Alpine sports car has been delayed until the spring of 1987.

2. The imported Renault Fuego and 18i models will be phased out by the time AMC's five-year product development plan is fully in place in 1987.

3. The new compact model due to arrive from France is now scheduled for U.S. introduction in the spring of 1987 and will comprise a full line, including a wagon.

4. With new labor terms negotiated with the company's Wisconsin workforce, AMC will attempt to work with Wisconsin state officials to improve the company's competitive position there.

5. AMC has no plans to replace the aging Kenosha assembly plant with a new, modern facility.

6. AMC is waiting for Renault Chairman Georges Besse to obtain necessary authorization in France on new loans to AMC that would reportedly total $175 million through 1987.

7. Whether he is elected AMC chairman later this week by the company's board of directors is "not important." Dedeurwaerder said he has all the tools he needs to operate effectively as AMC's chief executive officer.

AMC last week brought together about 600 top managers of the company and some 60 key dealers to address what Dedeurwaerder described as "exaggerated negative comments" in the media about conditions at AMC.

Amid declining sales for Alliance and Encore, the labor negotiations, the first-quarter loss after a slim profit in 1984 and a 25 percent reduction in departmental budgets earlier this year, Dedeurwaerder said the company has come in for a roasting in the press.

• "You have negative comments when you have to cut out 25 percent of your controllable costs and when you have to fix a labor situation in Wisconsin that is 20 years old," he said. "The press was taking that in a very negative way, and that impacts the morale of the dealers and the morale of the people inside the company."

Dedeurwaerder said the company's losses this year are consistent with what AMC executives have said all along about the company's five-year product plan that concludes in 1987.

He said the company's modest $15.5 million profit last year after a loss of $146.7 million the year before has tended to raise expectations about the company.

Dedeurwaerder once again countered persistent rumors that Renault will abandon its U.S. partner and that AMC is about to sell its profitable Jeep operations.

"In April, we told the stock-

Rising star in Canada

The 1985 Hyundai Stellar mid-size sedan debuted in Canada April 1 and is carving another niche north of the border for the South Korean auto maker. The rear-wheel-drive vehicle, based on Ford of Europe's Cortina and powered by a 1.6-liter OHC engine, joins the Pony subcompact in Hyundai's Canadian lineup. The Stellar's U.S. debut is scheduled for 1987.

Hyundai Stellar is hot in Canadian market

By Richard Johnson
Detroit Reporter

Hyundai Motor Corp.'s second Canadian entry, the mid-size Stellar sedan, is carving out another niche for the Korean car company that leaped into Canada last year with sales of more than 25,000 Pony subcompacts.

Being promoted as a new model "from the Pony people," the rear-drive Stellar is billed as an economical alternative to popular Eurosedans and Japanese mid-range offerings. According to Stellar advertising literature, "the cost of luxury has never been lower."

The Stellar is due to be introduced in the U.S. in 1987. Hyundai Motor America, which recently appointed its first 50 dealers, expects to begin selling the new front-drive Pony Excel subcompact in the U.S. next January.

After its first three months on the Canadian market, the Stellar reached 30 percent of Hyundai's overall volume in June, or about what company officials projected for the car. For the year-to-date, Hyundai ranks first among importers in Canada with combined Pony and Stellar sales of 31,661.

The Stellar went on sale in Canada on April 1. Hyundai sold 1,808 units in April, 2,392 in May and 2,868 in June, or 30 percent of the company's 9,561 total for the month. Hyundai is projecting overall Canadian sales of 50,000-55,000 for Pony and Stellar in 1985.

Hyundai's first-year success in the Canadian market drew pressure to remove duty-free status for the South Korean company.

As a result, the Canadian Government last spring set new duty levels on autos and auto parts imported from "developing nations," including South Korea. A new 7 percent duty on replacement parts

Mazda, Kia to build small car for Ford

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Mazda Motor Co. announced that it will join with Kia Industrial Co., of South Korea, to build a new small car that may be marketed in the U.S. by Ford Motor Co. sometime in 1988.

Under the tentative plan, Mazda will develop a 1,000-1,500-cc auto at a yet-to-be-constructed factory in South Korea and will supply parts. Kia will produce 125,000 of the subcompacts annually.

Although early plans call for the third-largest Japanese auto maker to design the vehicle, a Mazda spokesman pointed out that Kia has the capability of designing its own car and at one time produced an automobile based on a Mazda model until ordered by the government to concentrate on producing trucks.

The Seoul-based auto maker recently received government approval to add car production and sales to its current operations. Mazda said production of the new car will start when it is legally permissible, probably in 1987.

• According to some sources, the new car will be sold through Ford Motor dealers in the U.S. A Ford spokesman in Tokyo said that the company has been "desiring to purchase a car from Kia for some time." He said negotiations are progressing "but nothing has been finalized."

The spokesman also noted that Ford Motor has "an indirect relationship" with Kia through its 25-percent stake in Mazda, which in turn has an 8-percent equity in Kia.

It was also noted that Ford Chairman Donald E. Petersen revealed at the recent stockholders' meeting that the company was negotiating to buy a Korean car smaller than the Escort to sell in the U.S.

Initially, Mazda will supply Kia with key components for the car, such as engines and transmissions, along with technical assistance. However, in time, Kia will produce those components and other parts to achieve 100-percent local content.

Mazda has denied repors that it plans to import the Korean-produced car for sale in Japan. Also denied was a report that Mazda and Ford plan to increase their stakes in Kia.

The Mazda sokesman said the Japanese firm and Kia have had an assistance agreement since 1981.

Company steps up cost-cutting measures

Uncertainty grows in GM ad world

By Edward Lapham
Marketing Editor

There were more changes, and even a little new uncertainty in the General Motors media arena last week.

Ad agency Campbell-Ewald, which industry sources say is under fire from client Chevrolet to reduce its full-service billing commission rate from 15 to 12.5 percent, closed seven field offices, eliminated its public relations operation and offered early retirement to a number of employes.

"About 14 or 15" employes will be leaving, according to Campbell-Ewald Chairman Paul L. John.

John also said the billing rate is "still 15 percent," but acknowledged there is "always pressure" from clients to reduce costs.

Although many industry sources said privately they believed the C-E cuts were a direct result of the corporate-financed study of marketing and media services and other operations by management consulting firm McKinsey & Co., John said there is "no relationship."

"What we've done parallels what Chevrolet did," he said. "They've been streamlining things for a year and a half and who knows if their changes came from McKinsey or somewhere else?"

Campbell-Ewald, the largest GM supplier ad agency, had total 1984 billings of $390 million. Of that, about $200 million were from Chevrolet. A rate cut from 15 to 12.5 percent would therefore reduce income about $5 million.

Despite a flurry of panic and rumors in the Detroit ad community, there were apparently no similar cuts at other GM agencies.

D'Arcy MacManus Masius, which handles Pontiac and Cadillac among other GM accounts, and McCann-Erickson, which handles Buick, both reported business as usual.

The Campbell-Ewald cuts included closing Chevrolet account field offices in San Francisco, Los Angeles, Dallas, Atlanta, Chicago, New York and Detroit.

John said the restructuring of Chevrolet's field operations necessitated a similar restructuring at C-E. The agency will now use "field travelers" to coordinate campaigns with the 152 Chevrolet dealer associations.

"There certainly won't be any diminished service," he said. "In fact, it will probably be a little quicker."

John also denied reports from within the Detroit ad community which said more cuts at Campbell-Ewald are likely.

"There will be no more cuts," he told Automotive News.

John also labeled as "conjecture" reports that the McKinsey study had tagged C-E's product information department as being superfluous to the client's own staff, and therefore a likely cut target.

While the Campbell-Ewald cuts caused some uneasiness within the Detroit ad community, local

More belt laws dim prospects for air bags

By Jake Kelderman
Washington Reporter

WASHINGTON.—Efforts of domestic and import auto firms to negate the passive-restraint requirement by having state seatbelt-use laws enacted may prove successful long before the deadline, according to the Highway Users Federation.

Jack Martin, spokesman for the organization, said 14 states already have passed such laws and five more plus the District of Columbia are considering them.

Passive restraints—either air bags or automatic belts—must be

Sales to start in South

Nissan enters mid-range arena

By Arthur Flax
Assistant Truck Editor

IRVING, Tex.—Nissan Diesel America, Inc., will enter the U.S. commercial truck market later this month with a Class 7 cabover straight truck, according to W.W. Hall, vice president and general manager.

Hall said the first trucks are scheduled for sale at Southern dealerships by the end of July. The company has not finalized its dealership arrangements, and Hall said he could not be specific on the location of the first dealers. However, an earlier report said sales were scheduled to begin in Texas and neighboring states.

Nissan Diesel has dealers lined up and will start selling the trucks as soon as the distributor organization is set, Hall said.

The company is looking for established truck dealers to sell its products and is not planning to use Nissan car outlets. Sales outlets will be known as UD dealerships to differentiate them from Nissan's car outlets, and the U.S. truck marketing arm will operate independently from Nissan Motor Corp. in U.S.A., the car branch of the Nissan group here.

UD is the corporate symbol of Tokyo-based Nissan Diesel Motor Co., Ltd., the parent of Nissan Diesel America, and is based on its "Uniflow" diesel engine of the early 1950s.

Nissan Diesel America is establishing regional offices in the Dallas area for the South, Chicago for the Central U.S. and in a Northeastern area for that region. Hall mentioned New York, New Jersey and the Philadelphia area as possible sites.

Hall said he expected to have "about 80 to 100 dealers before the end of the year."

He said the company will enter the Western U.S. by next year.

A parts warehouse has already been established and stocked in Irving.

Hall said, "We will have spare parts and service support from the beginning."

The first shipment of trucks is now being delivered to entry points in Los Angeles and Jacksonville, Fla., he said.

The first truck model to be sold in the U.S. is called the CPB12 and is rated at 29,760 pounds GVW. It will be available in wheelbases of 177 inches, 208 inches and 238 inches and will accept a body up to 24 feet in length.

The truck will be powered by an in-line six-cylinder, four-cycle, 175-HP naturally aspirated diesel engine and will be equipped with an air-over-hydraulic braking system.

A second cabover straight truck —rated at 32,900 pounds GVW, powered by a 210-HP turbocharged diesel engine and equipped with air brakes—will go on sale in January and a Class 7 tractor follow shortly thereafter.

Nissan's goal for the first six months is about 300 sales, according to Hall.

He said, "I see a little more than that. My estimate between now and the end of the year is 500. I'm ambitious about it."

He added, "Class 6 and 7 is a big market that is still not completely dominated by diesel. There are still a lot of gas-powered units, and the trend continues toward diesel. There is a lot of room in the market and while most of the products seem to look the same, we feel our product is a little unique; it fits the marketplace.

Nissan will fight for a piece of the mid-range market with such recent Japanese entries as Isuzu and Mitsubishi, the European

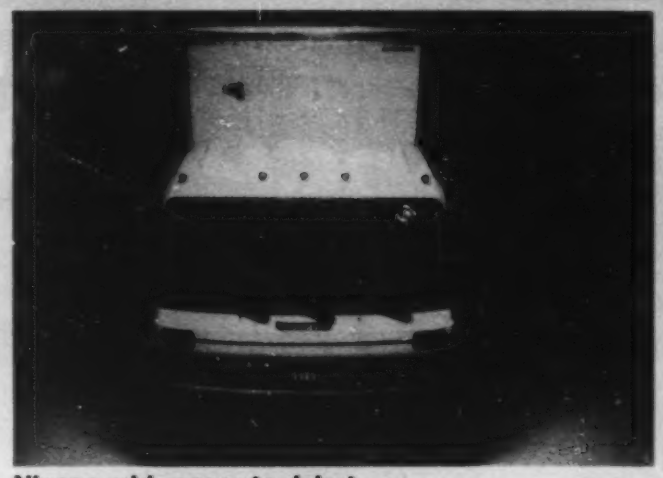
Please turn to Page 35, Col. 1

IH looking for LFE; Nissan may supply it

CHICAGO.—International Harvester reportedly is negotiating with Nissan to bring in a low front entry (LFE) mid-range diesel cabover to complement its own Cargostar.

Company officials have told dealers they are negotiating with a Japanese manufacturer to bring in an LFE. Some dealers reported hearing a deal with Nissan was imminent.

IH's official comment is that "no deal has been struck or consummated in any way, shape or form." IH would not say with whom it is negotiating.



Nissan mid-ranger to debut

Nissan Diesel America, Inc., plans to start sales of this CPB-12 Class 7 diesel truck in the South at the end of this month. The truck is rated at 29,760 pounds GVW and is powered by a 175-HP naturally aspirated in-line six-cylinder diesel engine.

First-half truck sales climb to alltime peak

By Arthur Flax
Assistant Truck Editor

Retail truck sales set an alltime record in the first half of 1985.

Through June, 2,378,351 trucks of all types were sold, up 12.5 percent from the previous record of 2,113,208 in the first half of 1978. Last year, 2,094,336 trucks were sold in the first half.

Light-truck sales also set a record.

In the first six months of this year, 2,235,808 light-duty Class 1-3 trucks were sold, up 13.5 percent

Tables on Page 26

from the former record of 1,971,470 units retailed through June a year earlier.

Medium-duty Class 4-6 sales of 26,939 units through June compared with 26,912 units sold a year earlier.

Heavy-duty Class 7-8 sales of 115,604 represented a 12.0 percent gain over the 103,198 units sold in the same 1984 period.

The sales counts are based on manufacturer's reports for light-duty sales and MVMA preliminary reports of medium and heavy-duty deliveries.

During June, retail outlets sold 383,032 light trucks, 6.9 percent below the alltime June high of 411,267 sales in 1978. In June last year, 338,321 light trucks were sold.

Sales of medium and heavy-duty units, however, dropped slightly during June.

Medium-duty sales totaled 4,356 in June, 1985, down 3.6 percent from the 4,517 units sold a year-earlier.

Heavy-duty sales in June, 1985, were 19,882, down 3.5 percent from the 20,609 units sold in the previous June.

The overall truck sales lead seesawed back to Ford during June as the company sold 116,383 light, medium and heavy-duty units to outpace Chevrolet's 111,151 light and medium-duty sales. Chevrolet held the lead in April and May.

Ford also recaptured the year-to-date truck sales lead it lost in May. In the first half, Ford sold 660,188 light, medium and heavy-duty trucks, compared with

Please turn to Page 26, Col. 3

California to get taste of London

This double-decker Leyland Olympian bus, shown here in London, will be demonstrated in California and Oregon as part of the company's campaign to establish a double-decker market in the U.S. Leyland recently made an agreement for Gillig Corp. to market the Olympian here. The companies believe that up to 10 percent of the 50,000 single-deck buses operating in the U.S. could be switched to double-deckers with significant operating benefits. The 67-seat Olympian is powered by a 240-HP Cummins engine.

DOT allows computer to replace truck log

WASHINGTON.—The U.S. Department of Transportation allowed Frito-Lay, Inc., Dallas, to use an on-board computer from Cadec Systems, Inc., in its truck fleet instead of handwritten log books which DOT requires over-the-road truckers to keep.

The DOT exemption from the current Bureau of Motor Carrier Safety hours-of-service record-keeping requirements is the first major change in the application of BMCS regulations in more than 35 years, according to R. Gregory Wing, Cadec executive vice president.

It is expected to produce major operational cost reductions and improvements in overall fleet safety and pave the way for extensive computerization of the U.S. trucking industry, Wing said.

• Frito-Lay expects to install more than 700 Cummins CADEC 300 Vehicle Information Systems in company trucks by the end of 1986.

Cadec Systems, Londonderry, N.H., markets and distributes its on-board computer systems with Cummins Engine Co., Inc.

Until now, the driver log was the only item Frito-Lay was unable to automate in its truck fleet operation, Wing said.

It has used the system since 1983 to collect and manage trip information, increase dispatcher productivity, reduce driver paperwork and maintenance costs and improve safety.

Wing said his customers had determined their drivers spend up to 40 minutes each day updating logs and doing other paperwork. The Cadec system cuts that to a few minutes, he said.

The Cummins CADEC 300 system consists of an on-board computer mounted in the truck cab; a pocket-sized, portable Memory Module that stores data collected by the unit and a unit to link the system with a personal computer used to run Cadec-licensed software and produce management reports.

Durakon signs Far East deal

LAPEER, Mich.—Durakon Industries, Inc., here, and Alpha Cubic, of Singapore, have signed a one-year agreement that gives Alpha Cubic exclusive distribution rights for Durakon products in Singapore, Malaysia and Indonesia.

The agreement expands Durakon's foreign distribution network. The company operates a subsidiary in Canada and has distribution agreements in Japan and Saudi Arabia.

Durakon produces liners for beds of pickup trucks. Its primary product, the Duraliner, is a one-piece, polyethylene liner that can be custom-molded to fit 97 percent of all pickup trucks.

IH and GM recall trucks for fixes related to safety

International Harvester and General Motors have announced recalls of safety-related components.

International announced the voluntary recall of about 39,600 S-Series, model 1600-1900 trucks and buses with power steering and 10,800- or 12,000-pound-capacity front axles, produced from August, 1977, through September, 1984.

International said steering arms on those vehicles may become brittle and break after an extended series of low-speed tight turns. IH said it will replace the steering arms with stronger units.

Seven steering-arm failures have been reported but no accidents have resulted, IH said.

General Motors is recalling about 600 medium and 1,500 heavy-duty 1983-1985-model-year trucks to inspect brake and cab step components.

GM said the front air-brake hose could rub against the inner fender on certain medium-duty GMC and Chevrolet trucks equipped with tilt hood and 7,000-pound front axle. A worn hose could cause a reduction in air pressure and braking ability.

Dealers will inspect and if necessary install new brake-chamber support brackets, brake-line elbows and hoses.

GM said it is not aware of any failures resulting from the brake hose condition.

On GMC heavy trucks equipped with 30-inch aluminum cab entry steps, dealers will inspect and, if necessary, replace, a mounting strap supporting a cab entry step. GM said it is aware of four minor injuries from falls as a result of broken step supports.

Step-by-step procedure

Appraising 'fair value' of dealership

Continued from Page 25

lership's true net worth—or what the owners can expect to keep if they were to liquidate the dealership in an orderly way (sell all the assets at their current market value, then pay off all debts).

The remaining amount gave us the true replacement value of the dealership. Net Asset value reflects the real value of the assets and under normal conditions should be the absolute lowest price a business owner would accept.

A dealership's net asset value may be above or below the book value, depending on whether the assets are overvalued or undervalued. Before calculating our adjustments, we talked to the owner of the dealership, other people in the auto business and real estate appraisers to calculate the correct adjustments to book value.

The vehicle inventory had the greatest value. We assumed it could be sold at close to wholesale prices, most of it directly to the public at sale prices and the remainder to other dealers at a discount of 10-20 percent from cost.

Those values were determined by estimating daily unit sales, comparing the profit-per-car with selling expenses and then calculating the point in time when the expense of selling would exceed the markup.

At that time, the remaining inventory was assumed to be sold to wholesale purchasers.

Current sales data per each new vehicle retailed showed:

Gross Profit	$1,352
Operating Expenses	– 987
Net (Before Tax)	$ 365

Obviously, the above adjustments and assumptions can vary because of several factors. At the time of our appraisal, 1985 models were coming into (or about to arrive in) dealer's showrooms, which means there would be price competition from all competing new-car dealers trying to move their remaining 1984 cars.

Also, car sales in the late fall and winter months in this area are normally slow. As in the sale of most goods, the most desirable products sell first, therefore slower-moving vehicles (models, colors, options) were assumed to be sold at larger and larger price concessions.

In summary, the vehicles sold last would receive the largest price discounts while those selling first would be sold closer to their retail price.

Following is a checklist of the adjustments we used. All percentages are deductions from book value:

Autos—demonstrators, 20 percent; used, at wholesale; new, zero on popular models, 10-15 percent on others.

Parts, accessories, 10 percent; machinery and equipment, 30 percent; furniture and fixtures, 75 percent; leasehold improvements, 100 percent; real estate owned, as appraised.

Liabilities—vacations and severance pay, as due; contingency warranty claims, 100 percent payable; phase-out costs, as estimated.

The adjusted balance sheet is shown below:

	Import Motors
Current Assets	$1,906,791
Capital Assets	196,814
Other Assets	1,203,405
Total Assets	$3,307,010
Current Liabilities	$1,875,605
Net Worth (book value)	1,431,405
Total Liabilities and Net Worth	$3,307,010

The adjustments to the balance sheet gave us a net asset value of $1,431,405, which should be

Light-truck sales top 2.2 million for first-half record

Continued from Page 18

Chevrolet's 657,373 light and medium-duty total.

Chevrolet still leads in year-to-date light truck sales but in June, Ford's total of 111,301 sales surpassed Chevrolet's tally of 109,772. A month earlier, Chevrolet had 128,517 light-duty sales compared with Ford's 109,043.

Ford's 660,188 (overall) sales this year topped its year-earlier sales of 599,692 units by 10.1 percent.

Chevrolet's 657,373 (overall) sales this year are 11.5 percent higher than its 589,540 sales a year earlier.

GMC recorded its second-best June sales in history with 32,707 deliveries, just 2.5 percent behind its June, 1978, record of 33,528 sales. Last June, GMC sold 30,257 units.

For the year, GMC's 175,611 sales are 6.1 percent higher than its year-earlier 165,575 sales.

Chrysler's sales of 331,035 trucks this year are 20.5 percent ahead of its 1984 six-month total of 274,813.

Jeep's 77,765 sales this year are 4.0 percent higher than its 74,766 sales through June, 1984.

SERVICE PROFITS

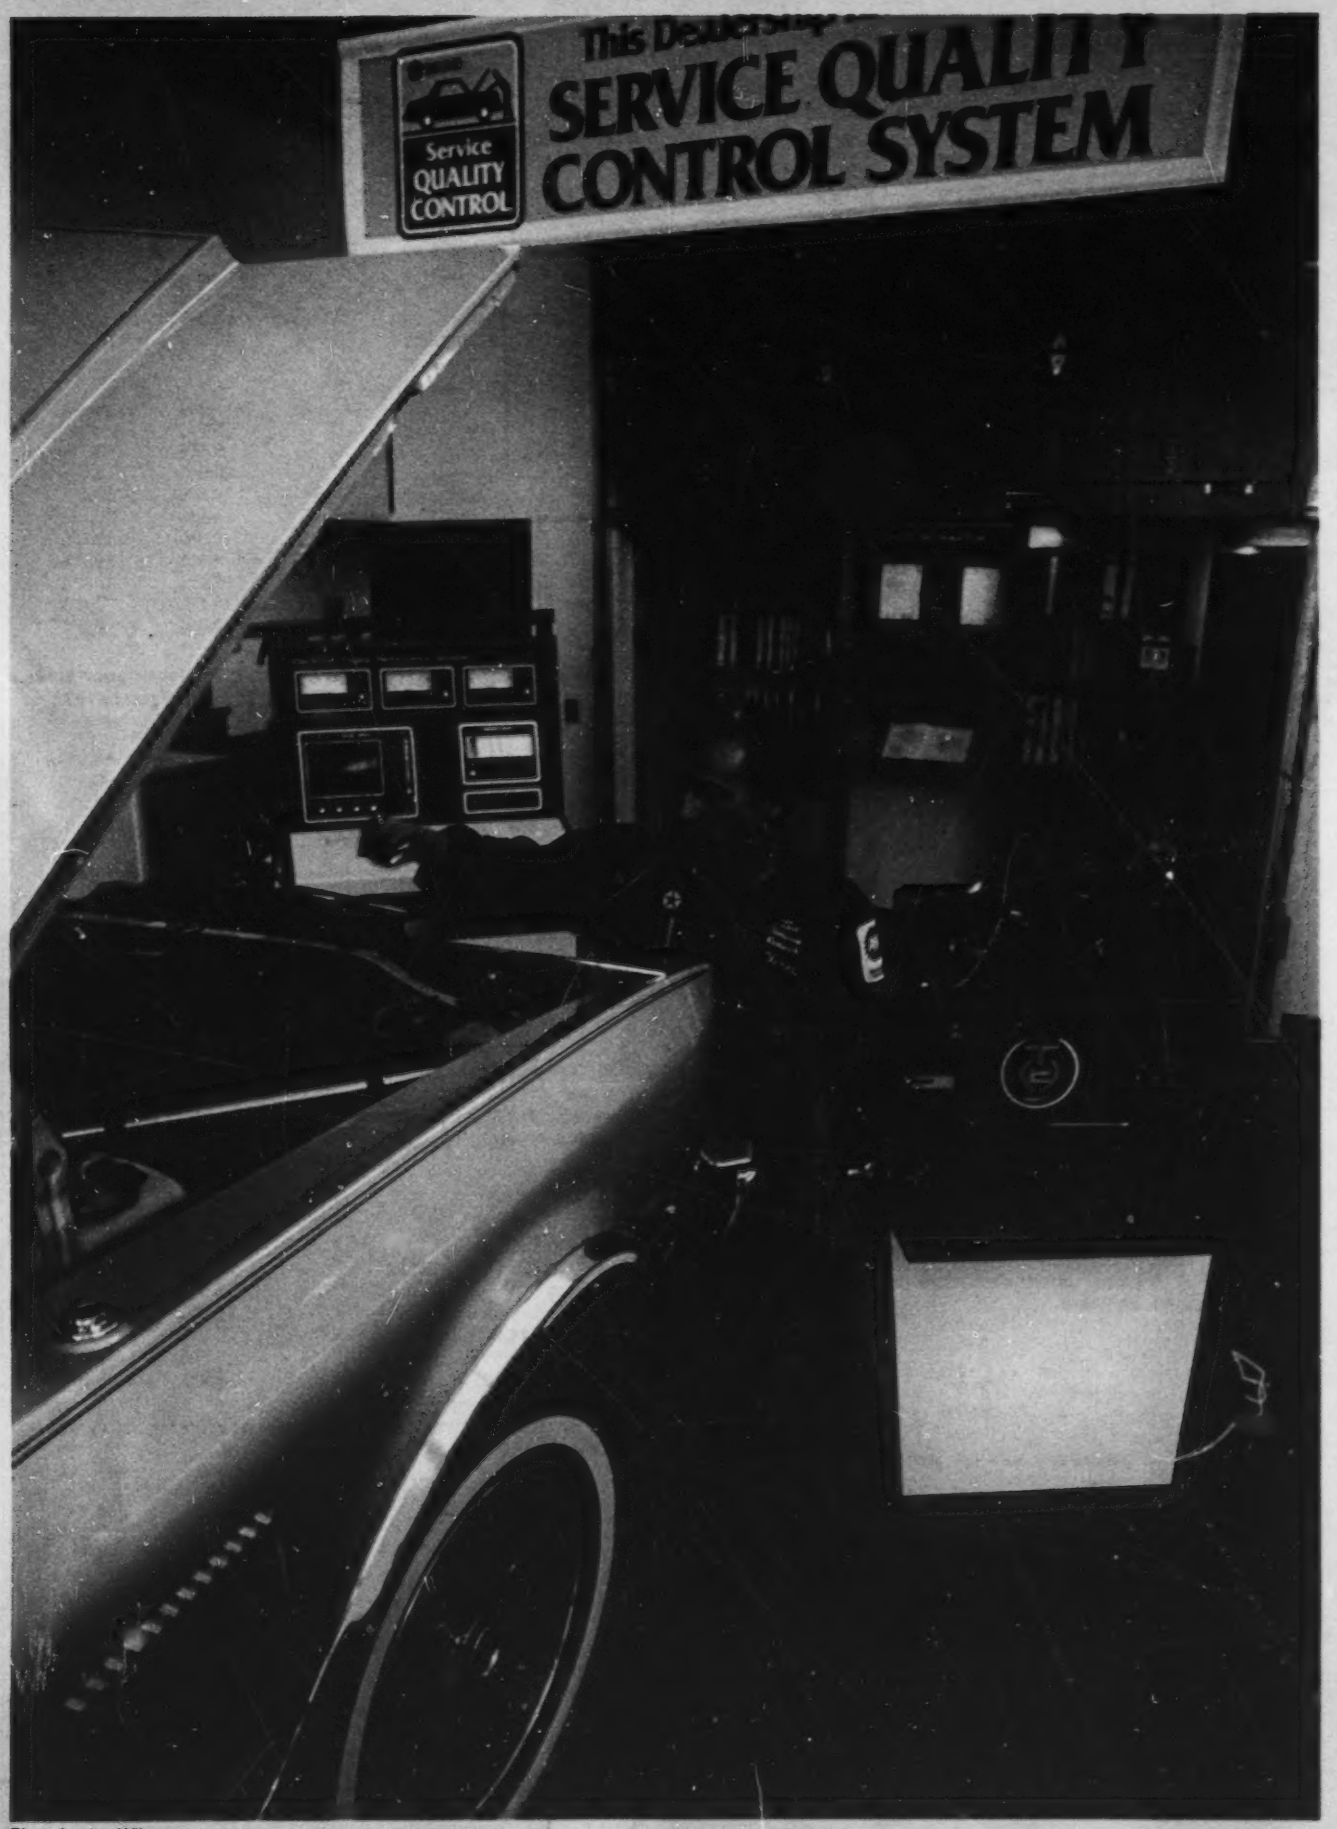

Photo by Joe Wilseens

Outlook for service still upbeat

Dealer shop chiefs note profit potential

By Colleen Belli
Assistant Industry Editor

Satisfying U.S. consumers in an automobile dealership service department has never been an easy task. Today's ever-increasing complex vehicles—with such sophisticated equipment including turbocharged engines, front-wheel drive and electronic gadgetry—make the task even greater.

Today's service manager has to be better educated, better equipped and a better listener than ever before. In short, he or she has to be a professional—in communicating with customers, getting the job done and conducting the proper follow-up.

Although somewhat less so than last year, the nation's dealership service managers are optimistic about the business outlook in the next two years.

While they believe that the new 1985 models are no more profitable to service than older models on the road, they believe that their service department offers a potential for increased profits in the future.

These are the views of the men and women on the firing line with car owners daily, as taken from the third annual *Automotive News* survey of service managers at domestic and import new-car dealerships.

The in-depth look at this special automotive group was taken via a questionnaire sent to service managers throughout the U.S. It reveals that those who head up the nation's service departments typically are:

- Less optimistic about the business outlook for the automobile market in general and their dealerships' part in that business in the future than they were in the previous two years.
- Of the belief that tuneups are adding overwhelmingly to service income, while engine repair and wheel balance contribute less to

Please turn to Page E-2, Col. 1

The service and parts department of tomorrow is here today at Chrysler Corp.'s Service and Parts Operations in Centerline, Mich. This full-scale reproduction of a dealership service and parts operation was designed exclusively for Chrysler's service management training program. It is completely equipped—right down to the paperwork—and has the most modern computer systems for automotive retailing operations. It provides an ideal training environment for dealer personnel who attend Chrysler seminars.

Survey

Continued from Page E-1

the overall profit picture of their service operation.

- Suggesting that extended service contract work is adding to their shop's income, but new-car warranty work is not.
- Confident that their dealerships will buy new service equipment in the coming year and that most of it will be for tuneup and wheel-alignment work.
- Suggesting for the second straight year that new cars are becoming less lucrative to service than older models.
- Stronly believe that the service department offers the potential for increased profits in the future
- On a more personal level, the third annual *Automotive News* survey shows that the majority of the nation's dealership service managers are: 35 to 44 years of age; have one to 11 years of experience as a service manager; were mechanics or write-up people before becoming service managers; earn between $20,000 to $24,999 in annual compensation and that compensation is based on salary plus incentive.

Furthermore, the managers do not believe their salary and benefits are commensurate with their experience.

While the service managers are less optimistic than the last two years, a majority of respondents—61.4 percent—still believe the automobile business will continue to be good in the next two years. This compares with 89.7 percent last year and 89.1 percent in 1983.

The same trend was noted for the outlook of individual dealerships—although the decrease was less severe. A total of 85.7 percent said they believe their dealership's future is bright,compared with 92.1 percent in 1984 and 86.6 percent in 1983.

One of the prime reasons given was the increased complexity of today's automobiles. When the newer, high-tech models need service, consumers chose dealerships rather than independent repair shops.

In addition, several respondents said their dealerships will move into new facilities in the coming year which they feel will boost their business.

About the outlook, a Memphis Ford dealership service manager said, "We no longer hear much objection to car prices; and the retail market need has not caught up."

A Milwaukee GM service manager said, "Interest rates are down, money availability is higher and the job market is up."

A Honda service manager from Montgomery, Ala. noted, "Automotive repair is becoming more complicated, there are less do-it-yourself repairs possible."

A Hicksville, N.Y. Buick dealership service manager attributed the bright outlook to "increasing car sales and the lack of repair knowledge by independent repair shops."

A Pontiac-Cadillac service manager from Worcester, Mass., noted: "All economic indicators point to continued growth."

Another GM dealer shop manager from San Antonio added: "Lower interest rates will generate sales, and service will follow."

Still another Michigan service manager of luxury cars said, "Big business is learning about consumer price fear and labor expense. If they continue to regain control over quality and runaway labor expense, it will be successful."

Automotive News Survey of Dealer Service Managers

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

	Automobile Market			Dealership		
	% Responses, 1985	% Responses, 1984	% Responses, 1983	% Responses, 1985	% Responses, 1984	% Responses, 1983
Improve	61.4%	89.7%	89.1%	85.7%	92.1%	86.6%
Same	24.3%	7.6%	8.6%	10.0%	5.3%	10.5%
Worse	8.6%	2.7%	2.3%	2.9%	2.6%	2.9%

Question 2: Do you as a service manager, feel thar your service department offers a potential for increased profits in the future?

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	98.6%	97.2%	96.1%
No	1.4%	2.8%	3.9%

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	97.1%	94.4%	95.2%
No	2.9%	5.6%	4.8%

Question 4: Do you, as service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	70.0%	74.3%	66.4%
No	27.1%	25.7%	33.6%

Question 5: Who hires the mechanics in your service department?

	% Response, 1985	% Response, 1984	% Response, 1983
Dealer owner	15.7%	17.8%	12.3%
Dealership manager	5.7%	6.7%	6.2%
Service manager	92.9%	75.5%	81.5%

Question 6: When your dealership buys new service equipment are you involved?

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	100.0%	97.2%	98.4%
No	0.0%	2.8%	1.6%

Question 7: Which statement below best describes your involvement in buying new service equipment?

	% Response, 1985	% Response, 1984	% Response, 1983
Original purchase request	62.9%	39.9%	38.1%
Approve make(s) selected	38.6%	24.3%	24.0%
Negotiate terms	22.9%	3.7%	5.4%
Give advice on needs	37.1%	53.5%	57.7%

Question 8: What type of service equipment does your dealership plan to buy this year?

	% Response, 1985	% Response, 1984
Tuneup	21.4%	27.7%
Wheel alignment	18.6%	21.3%
Wheel balance	10.0%	14.9%
Collision repair	10.0%	12.8%
Brake	7.1%	10.6%
Transmission	2.9%	4.3%
Engine overhaul	2.9%	2.1%
Other	42.9%	6.3%

(Note—question not asked in 1983 survey.)

Question 9: Are new model cars more profitable to service than those of previous years.

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	11.4%	11.8%	14.6%
No	34.3%	52.9%	67.4%
Same	50.0%	35.3%	18.0%

Question 10: How many hours per week is your service department open?

Number of Hours	% Response, 1985	% Response, 1984	% Response, 1983
Less than 45 hours	18.6%	11.1%	23.5%
45 to 50 hours	38.6%	47.2%	40.7%
51 to 55 hours	27.1%	19.4%	19.5%
56 to 60 hours	11.4%	8.3%	9.3%
More than 60 hours	4.3%	14.0%	7.0%

Question 11: How many employes are there in your service department (including parts and service personnel)?

Number of Employes	% Response, 1985	% Response, 1984	% Response, 1983
1 to 10	24.3%	33.3%	27.4%
11 to 20	28.6%	27.8%	25.7%
21 to 30	15.7%	13.9%	19.5%
31 to 40	17.1%	11.1%	13.3%
More than 40	12.9%	13.9%	14.1%

Question 12: What is your most profitable service operation?

	% Response, 1985	% Response, 1984	% Response, 1983
Tuneups	45.7%	48.5%	28.1%
Brakes	25.7%	34.3%	26.5%
Wheel alignment	14.3%	20.0%	15.6%
Transmissions	15.7%	17.1%	23.4%
Collision repair	11.4%	16.4%	13.0%
Wheel balance	7.1%	11.4%	12.5%
Engine overhaul	8.6%	10.5%	25.5%
Other	14.3%	11.4%	12.5%

Question 13: How much do the following contribute to your service profits?

	Significantly	% Responses, 1985 Some	None
New car warranty work	44.3%	48.6%	5.7%
Extended service contracts	17.1%	60.0%	15.6%
	Significantly	% Responses, 1984 Some	None
New car warranty work	48.8%	43.9%	7.3%
Extended service contracts	8.6%	74.3%	17.1%
	Significantly	% Responses, 1983 Some	None
New car warranty work	38.2%	52.3%	9.5%
Extended service contracts	23.4%	60.9%	15.7%

Question 14: What is your age?

	% Response, 1985	% Response, 1984	% Response, 1983
18 to 24	0.0%	0.0%	0.7%
25 to 29	15.7%	9.8%	8.5%
30 to 34	11.4%	19.5%	13.3%
35 to 39	18.6%	29.3%	22.8%
40 to 44	22.9%	7.3%	19.6%
45 to 49	12.9%	4.9%	10.9%
50 to 54	11.4%	12.2%	14.1%
55 to 59	4.3%	14.6%	7.8%
60 to 64	2.8%	2.4%	2.3%

Question 15: Before becoming a service manager at your present or at any other dealership, what type of job did you have?

	% Response, 1985	% Response, 1984	% Response, 1983
Write-up man	42.9%	24.4%	16.9%
Mechanic	48.6%	44.1%	38.1%
Parts Manager	17.1%	9.8%	12.2%
Other	37.1%	21.7%	32.8%

Question 16: How many years have you been a service manager (including time as service manager at previous dealerships)?

Number of Dealers	% Response, 1985	% Response, 1984	% Response, 1983
1 to 3	22.9%	22.9%	20.3%
4 to 7	20.0%	42.9%	21.6%
8 to 11	25.7%	11.4%	15.6%
12 to 15	12.9%	5.7%	14.1%
16 to 19	11.4%	2.9%	10.1%
20 or more	5.7%	14.2%	18.3%

Question 17: What was your total compension last year for being a service manager?

	% Response, 1985	% Response, 1984	% Response, 1983
Less than $15,000	2.9%	2.7%	3.1%
$15,001 to $19,999	10.0%	16.2%	14.0%
$20.000 to $24,999	24.3%	8.1%	15.6%
$25,000 to $29,999	7.1%	27.0%	22.1%
$30,000 to $34,999	10.0%	13.5%	12.5%
$35,000 to $39,999	17.1%	10.8%	14.8%
$40,000 to $44,999	5.7%	6.8%	3.9%
$45,000 to $49,999	7.2%	9.5%	5.5%
$50,000 or more	14.3%	5.4%	8.5%

Question 18: What was your total compensation for being a service manager based on?

	% Response, 1985	% Response, 1984	% Response, 1983
Salary only	8.6%	11.8%	14.1%
Salary + overtime	0.0%	2.9%	2.3%
Salary + bonus	38.6%	41.2%	29.7%
Salary + incentive	50.0%	35.3%	42.2%
Salary + other	5.7%	8.8%	11.7%

Question 19: Do you believe your salary and benefits are commensurate with your experience?

	% Response, 1985	% Response, 1984	% Response, 1983
Yes	51.4%	63.6%	59.7%
No	45.8%	36.4%	40.3%

Note: In some cases totals add to more than 100% because of multiple responses.

Survey

Continued from Page E-2

Among the respondents who believe the business outlook will become worse in the next two years, an import dealership service manager from Arkansas stated, "The new car quality is poor and the front-wheel-drive models will not hold up."

Another dual Ford-Isuzu service manager said, "I look for the new sales to lighten up due to increased interest rates."

Several other shop managers cited local conditions which will lead to a decline in their business.

Of those responding to the survey, the top nameplates were Chevrolet and Buick, each representing 12.9 percent of the total, with Honda the top import brand.

Some 37 percent of those surveyed work for single-franchise dealers in 1985, the same as last year but down from 44 percent in 1983. Cadillac continues as the top dual franchise among domestic brands; BMW and Isuzu among imports.

Of those responding to the survey, 46 percent work at dealerships that sold between 400 and 1,299 cars last year. Additionally, 24 percent work for smaller retail outlets with volumes up to 399 units.

Also among the respondents, 27 percent live in cities or towns with a population of 50,000 to 249,999 people while the majority—41 percent—were from smaller towns of less than 50,000 people.

An overwhelming 97.1 percent of respondents feel their dealership management believes the service department offers the potential for increased profits in the future. This compares with 94.4 percent last year and 95.2 percent the previous year.

Many cited their dealer's involvement in the service department as a positive factor. Another prime reason given was improved training for service mechanics and other service personnel.

A Dayton Oldsmobile-Cadillac service manager said, "Each day we grow bigger and bigger, and if the department is run correctly, there is no reason why profits should not grow."

A Subaru manager from Vermont cited "better controls, an increase in service hours and service promotions" as the key to increased profits.

A Newark, N.J. Chrysler-Plymouth-Ford-Toyota service manager said "a new facility with state-of-the-art equipment and a professional management team" will increase profits.

Another reason for brighter profits is "because of the computer age. It has hit the auto industry," said an Oldsmobile-Chevrolet service manager from Carbondale, Ill.

A Memphis Ford dealer said, "We are going after increased maintenance sales and controlling expenses."

A Cadillac-Rolls Royce service manager from Michigan said, "We are presently adding a 150-foot extension to our building to try to accommodate our overcrowded, 28-bay service area."

Still others cited new tasks to increase profits include conducting phone surveys after repair work is done and doing more work in-house that used to be sublet.

• A majority of those surveyed —70 percent—feel their dealerships are spending enough on advertising and promotion to increase service business while 27.1 percent believe promotional activity should be increased. This compares with 25.7 percent last year and 33.6 perrcent in 1983.

Among those who believe they are spending enough, a Stockton, Calif. Chevrolet-Chrysler service manager said, "I don't believe that advertising is the key. By doing quality work and backing it, your customers do the advertising for you."

Another Oldmobile-Chevrolet service manager from Carbondale, Ill., suggested no further advertising is needed because "we very seldom have any empty service stalls." Several others also reported they already have enough repair work to keep their shops busy without further promotion.

An overwhelming majority of the service managers—92.9 percent this year— said they are responsible for hiring new mechanics in the shop rather than the dealership owner or manager. This compares with 75.5 percent in 1984 and 81.5 percent in 1983.

A Lakeland, Fla. Mazda-Volkswagen service manager said, "I'm responsible for our department's success or failure, and I am trusted to make thse decisions."

A Gary, Ind. Cadillac shop manager stated, "It has proven best when applicants are screened by service people."

A Tucson, Ariz. Chrysler service manager believes the service manager should choose new mechanics because "they work under a system of satisfaction and caring about their work."

A Chevrolet-Mazda-Mercedes Benz service manager from Valoosta, Ga., said he and the dispatcher choose potential new candidates because "we are the most qualified people here to evaluate technicians."

It is the feeling of service managers surveyed that new-model automobiles offer less service-profit potential than those of past years. Only 11.4 percent say they expect 1985 cars and trucks to be bigger profit generators than their predecessors. This was about the same level in the prior two years surveyed. The major reasons cited were improved quality, extended warranty coverage by the factories and less maintenance requirements.

A Dayton GM service manager explained, "With the new warranties, the customer pay work will be less per car."

A White River Junction, Vt. Ford service manager said, "The quality is better than in past years."

Another Ford service manager from Memphis explained, "There are longer maintenance intervals. The '85 models have not yet reached the time or mileage for high repair needs."

A multi-brand manager from Trenton, N.J. said, "With new equipment, it's easy to find problems."

Among the respondents, 45.7 percent cited tuneups as their most profitable service operation and 25.7 percent cited brakes. A domestic dealer from California attributed his success in these areas to properly trained personnel.

A GM service manager from Illinois said that because of the complications of models since 1981 more customers are bringing their vehicles to his dealership for tune-ups.

A Huron, O. multi-brand import dealer service manager cited tune-ups as the major money-maker and explained: "These are basic repairs which do not have many time control problems."

Another service manager from Michigan said of tuneups, "Outside shops don't know how anymore, its a lot more than plugs and timing and filters."

Among those who noted other operations, many said scheduled maintenance was their most profitable. A Tri Cities, Wa. GM service manager said, "It is fast and has a low come-back rate."

A Honda service manager from Conroe, Tex. said, "Scheduled maintenance has good labor dollars in relation to actual time needed for repair."

Get 'em in and out with new KONTAX-II.
The system to sell more service.

Pennzoil introduces Kontax II. The incredibly simple, proven way to turn your service department into a smooth-running money maker. The proof? Substantial increases in sales per repair order at dealerships already using Kontax II. It stimulates and speeds up service traffic.

- Increases your commissions.
- Sells more services.
- Automatically contacts your customers.
- Easy to install and use.

Kontax II helps you earn more commissions by speeding up traffic flow. Kontax II produces a completed repair order in 15 seconds, at the touch of a button. You're free from doing time-eating paperwork to process more repairs and keep customers moving smoothly into the service bays.

Kontax II keeps track of every customer's service history, providing a valuable selling tool: builds customer confidence in you, by accurately recommending needed services–based on vehicle model, mileage, maintenance record and other pertinent information. This same data also helps you quickly identify cars under factory recall programs.

Kontax II contacts your customers. Brings them back for the right services, at the right time. When scheduled maintenance is due, your customized reminder mail program lets the customer know. You decide the mailing intervals, depending on your workload.

Computer people call it "user friendly". We call it easy to learn and use. Operator training, like everything else you'll need, is part of your Kontax II rental package. No equipment investment. Kontax II is a Pennzoil system backed up by Pennzoil personnel, so service is never a problem.

Time is money. Earn more of both for your service department by returning the coupon below, or with a profitable phone call to: Kontax II Dept., (619) 565-9144.

I like the idea of increasing profits and commissions.

SELLS MORE SERVICE.

Dealers reap $30.7 billion in service

They account for 32% of the domestic service and parts total

By Jack Walsh
Service Editor

Almost $95 billion was spent in the U.S. during 1984 in the service and parts market, according to data compiled by NADA's Industry Analysis Division, and franchised new-car dealers accounted for 32 percent of the total.

Aftermarket volume for the year was up 10.5 percent over 1983 to approximately $94.7 billion, compared with the previous year's $35.7 billion, and was 40 percent higher than the $67.7 billion spent in 1979.

According to the NADA study, an estimated $33 billion was spent during the year on service labor, $46 billion on parts and accessories, and $16 billion on tires.

Although new-car dealerships accounted for almost a third of the total service and parts volume during the year, they represented only 8 percent of all auto-repair facilities across the nation.

"This disproportionate market share," NADA explained, "reflects the dealer's propensity to do more difficult and more expensive repairs, as well as the fact that new-car dealerships have larger facilities on average."

During the year, the study showed, the nation's 24,725 new-car dealerships accounted for an estimated $30.7 billion in service and parts business, an increase of 14.6 percent over the year-earlier $26.8 billion and 32.9 percent greater than the $32.1 billion recorded in 1979.

"The average dealer in 1984 had a 6 percent increase in dollar sales per repair order and a 7 percent increase in the number of repair orders performed," NADA noted, "with warranty work exhibiting the greatest increase in dollar sales.

"The recovery in new-vehicle sales over the past two years has meant that vehicles still covered by warranty make up a greater percentage of all vehicles in operation," the report added.

During the year, dealers' total service labor sales amounted to approximately $12.7 billion, a gain of 14.4 percent over the previous year's $11.1 billion. Total service and parts volume was up 14.6 percent, from $26.8 billion in 1983 to $30.7 billion a year ago.

On the service-labor side, warranty work totaled $1.8 billion in 1984, an increase of 20 percent over the year-earlier $1.5 billion. Warranty-parts sales were up 35.8 percent to approximately $2.3 billion, compared with $1.7 billion in 1983.

Dealers' customer-paid mechanical and body labor sales a year ago totaled an estimated $7 billion, a gain of 11.1 percent over the previous year's $6.3 billion. Sales of parts used in customer-paid repairs in 1984 were up 9.6 percent, $5.7 billion versus $5.2 billion.

Sales of parts by dealers' shops to outside customers during the year totaled approximately $2.3 billion, an increase of 4.5 percent over the year-earlier $2.2 billion.

Last year, according to the NADA study, there were 299,125 auto-repair facilities in the U.S., with independent shops accounting for slightly more than 60 percent of the total, or approximately 183,000 outlets.

NADA said the count includes only those shops which do "significant" repair work—beyond simple oil changes and lube jobs and/or those outlets that receive at least 2 percent of total dollar revenue from service labor.

In addition to franchised new-car dealers and independent shops, the list included 69,000 service stations, 19,000 TBA (tire, battery and accessory) dealers, 2,000 mass merchandisers and 1,400 "others," such as non-franchised dealers, farm-equipment dealers and fleet shops.

NADA said service and parts sales by the independent and franchised repair shops in 1984 totaled approximately $25.6 billion, compared with $23.1 billion the previous year. TBA dealer volume increased from $18.7 billion in 1983 to $20.5 billion last year.

Totals for the other types of repair facilities were: Service stations, $7.9 billion in 1984 versus $7.5 billion the previous year; mass merchandisers, $7.9 billion versus $7.6 billion, and all others, $2.1 billion versus $2 billion.

Number of Auto Repair Facilities—1984

Computers

Continued from Page E-14

—it's on a lease-buy option where the buyout is $1—he has gained 15 terminals and a computer system to run them. It's a real savings, when the cost of the equipment is considered.

Like the Bauer experience, Steele has found that this system has helped to increase efficiency with parts and in the office.

As for scheduling, it has enabled this south-of-Boston dealership to become more efficient, with fewer overbookings and fewer cars sitting overnight.

"Before we had this system," Steele said, "we used to guesstimate the number of cars we could handle during the day, but using this system we can now schedule appointments based on the skills available.

"The system looks at the available technicians and their skill levels and tells us how many cars we can book, based on those skills and the number of hours they represent. Of course, it doesn't solve personal problems such as when a technician is sick, but it does show us how many hours we have left in a day and how much to book."

Overall, this has helped to build customer confidence and satisfaction, Steele said, because it now means a customer can be informed early if a car will be tied up, which makes the dealership more professional to the customer.

On another level, Steele and his staff have come to depend on the computer system. "Now that we have it, we don't realize how much we depend on it. If the system goes down, we really miss it and I hear about it because everyone starts screaming."

Like Bauer's Craft, Steele estimates his staff's productivity has increased by 15 to 20 percent with the computer system.

On average, this medium-sized dealership runs 35 cars a day through its 14 service stalls. This turns in a gross of $45,000 per month or $540,000 per year. The parts operation "does a little better," Steele said.

Another veteran of dealership computerization is Ron Remy, manager for many years of R.H. Long Motor Sales, Inc., Framingham, Mass. Long, a Pontiac-Cadillac-GMC dealer for more than 50 years, has two in-house computer systems. A Dyatron and a Tricom are used specifically for service. The dealership has been computerized for six years.

With these systems, Remy has seen his operation become much more efficient through the years. They have enabled the service staff—which includes 24 technicians, four service writers, an assistant service manager, a warranty administrator and three shop foremen—to become far more efficient at scheduling cars in and out of the dealership's 66 service, body, used-and-new-car stalls.

"We used to let people come in off the street for service. Now, if the system says we can't, we reschedule them to another day," Remy said. It enables his staff to smooth the workflow and eliminate bottlenecks.

Long Motor Sales makes complete use of its computer system. For example, Remy said, it is going all day long, handling various functions from payroll to accounting and parts. It is also capable of handling service merchandising.

From a merchandising standpoint, the system is valuable because of the five-year history which is maintained on every car the dealership sells. Since the system also flags mileage versus services needed, it can alert the service staff to send out mailings to customers whose cars need service.

In what may become the largest dealership in the world, Henry Butts Oldsmobile recently broke ground for a new 250,000-square-foot dealership on 25 acres in Dallas. It was designed by J. Roger Crownrich & Associates Inc.

Designing tomorrow's service department

Texan foresees biggest changes in customer reception area

DALLAS.—Scratch a Texan and you'll find someone with a way with words, and J. Roger Crownrich, president of the construction firm here which bears his name, is no exception.

For instance, when the specialist in designing, engineering and constructing dealerships was asked for examples of radical change in that area today, he responded: "Inch by inch, anything's a cinch. It's just a little bit here and there on a year-in, year-out basis. We keep changing, making improvements, adapting."

Crownrich has been in construction for 39 years and has specialized in dealerships for the past 25 of those years. "We've probably done a couple of hundred dealerships. In some cases, we've provided just the plans but, in most cases in the Dallas/Fort Worth Metroplex, we've done the construction, also.

"It's a turn-key operation, a design-build concept where the design, engineering and construction are handled turn-key with one company. That means there's one person to look to if there's a problem," he said. His company has done dealerships in cities as far away as San Antonio, Tex., and Jackson, Miss.

Obviously, someone in a position such as that occupied by Crownrich would know the ins and outs of dealership operations and from whence the profits can come. He also must have a pretty good crystal ball.

"If everything is done right, customer labor—and most dealers refer to service as customer labor—can pretty well take care of the overhead of the whole establishment. It can handle the debt service on all physical improvements and everything from car sales goes to other things," he said.

One part of the dealership changing rapidly is the service write-up zone, he said. "Years ago, we thought of the customer reception area as where the customers drove in. For a long time, they just drove into the shop and pulled up by the side of the stall. That was just ridiculous, but that was the way it was done.

"Then we began putting canopies on the outside for a little shelter. Then we started putting doors on them, bringing the service files out into that area and maybe having a refreshment stand. Then along came computers, CRTs and printers. Nearly all the service writers now are calling up the service history and the data on the car on their CRTs rather than going to the service files.

"Now all of a sudden we need air-conditioned space, and we've got customer-reception areas that are entirely different. The customers drive in and the service advisers can look out and see them

1984 numbers for New York State and Oklahoma, and Oklahoma, 1985, from manufacturers' sales records.

But April market share is lowest of 1985

Import registrations rise for month

By Jenny L. King
Detroit Reporter

Registrations of new imported cars in the U.S. in April jumped 14.95 percent from the year-earlier month and claimed 23.05 percent of the total market.

The import share, although up from 1984, was the smallest for any month so far this calendar year. Imports took 26.41 percent of new-car registrations in January, but their share has dwindled each month since then.

According to figures compiled by R.L. Polk & Co., April import registrations numbered 215,602, up 14.95 percent from 187,554 in 1984, when they represented 22.42 percent of the total market.

Top-import Honda was 10,000 units above second-place Nissan in April, with Honda earning 21.85 percent of the import segment and Nissan holding 17.50 percent. Polk counts all products of both companies as imports despite the fact that some of their cars are made in the U.S. Polk does the same for Volkswagen.

Toyota, with no U.S. products to swell its ranks, wound up in third place with registrations of 33,223 new cars and 15.41 percent of the import market, some 5 percentage points below its bygone 20-plus percent. VW was a distant fourth, with 7.26 percent of the market, followed by Japanese makers Mazda and Subaru.

Volvo was seventh, Mercedes-Benz eighth, BMW ninth and Audi 10th, just as they had been in April, 1984. Of the Europeans, Mercedes and BMW gained slightly in their shares of the import market; Volvo and Audi lost 0.94 percentage points and 0.19 percentage points, respectively.

The top 10 imports claimed 87.91 percent of the market this April, compared with 89.92 percent in 1984.

Import registrations in the first four months increased 8.64 percent, to 842,739 from 775,684. Their share of the total U.S. market edged up to 24.61 percent from 24.23 percent a year earlier.

Honda, with 20.36 percent of the four-month market, had the deepest penetration and also enjoyed a 0.42 percentage-point growth from its 19.94-percent share in 1984.

Mazda and BMW were the only other major importers to increase their portions of the import market the first four months. Mazda was up 0.12 percentage points and BMW grew 0.32 percentage points.

In contrast, Toyota slipped 0.56 percentage points, Nissan was down 0.35 percentage points, VW dropped 0.37 percentage points and Subaru was off 0.33 percentage points.

Volvo lost 0.49 percentage points, Mercedes was down 0.07 percentage points and Audi dropped 0.06 percentage points.

Ten makes held 88.13 percent of the market, down from 89.50 percent the first four months of 1984.

Japan's share of the import market, once as high as 80 percent, stood at 67.66 percent in April, 1985, down slightly from 67.78 percent percent a year earlier. Germany climbed to 15.12 percent from 14.81 percent, the U.S. share was up to 9.57 percent from 8.57 percent and Sweden fell to 5.54 percent from 6.46 percent.

April import registrations by country of origin were:

	April, 1985	April, 1984
Japan	145,867	127,122
W. Germany	32,597	27,770
United States	20,642	16,069
Sweden	11,946	12,115
France	2,055	2,457
Great Britain	1,778	1,439
Italy	717	555
Ireland	0	27
TOTAL	215,602	187,554

For the four months, Japanese cars accounted for 70.24 percent of the total, down some from 70.61 percent in 1984. German products edged up to 13.97 percent from 13.57 percent, while foreign cars assembled in the U.S. climbed to 8.47 percent from 7.77 percent. Numbers were as follows:

	4 Mos., 1985	4 Mos., 1984
Japan	591,975	547,994
W. Germany	117,720	105,260
United States	71,421	60,279
Sweden	44,657	44,457
France	8,471	10,259
Great Britain	6,273	5,649
Italy	2,222	1,664
Ireland	0	122
TOTAL	842,739	775,684

Registrations of new imported trucks leaped 36.49 percent April to April, moving to 80,315 from 58,843. Totals for the major manufacturers were:

	April, 1985	April, 1984
Toyota	30,533	21,630
Nissan	22,399	17,213
Mazda	8,078	9,899
Isuzu	6,766	0
Dodge Ram 50	0	3,268
Others	12,539	6,833
TOTAL	80,315	58,843

Year-to-date imported-truck registrations were up 37.28 percent through April, to 304,853 from 222,073. Numbers were as follows:

	4 Mos., 1985	4 Mos., 1984
Toyota	113,440	81,444
Nissan	89,508	65,488
Mazda	34,089	37,793
Dodge Ram 50	24,267	12,338
Others	43,549	25,010
TOTAL	304,853	222,073

Toyota to reduce exports to China

TOKYO.—Based on results of an internal survey that indicates China will sharply reduce imports because of limited capacity of port facilities, Toyota Motor Corp. will cut its exports to that country to 3,000 units a month.

Toyota's exports of trucks and other completed units to China reached 8,400 in November, 1984, a ninefold increase from the year before. They have remained between 9,500 and 12,000 units since December, 1984.

Toyota said it expects to boost shipments to China to 5,000 to 6,000 units in April or May, 1986.

De Tomaso posts profit; had loss a year earlier

RED BANK, N.J.—De Tomaso Industries, Inc., the Italian maker of motorcycles, Innocenti minicars and Maserati luxury cars, announced a profit for the quarter ended March 31, compared with a loss the previous year.

Net income was 2,772 million Italian lire, equivalent to $1.4 million based on current exchange rates, compared with a loss in the corresponding quarter last year equal to $1.6 million.

Sales were down 6.2 percent at 93,650 million lire, or $46.2 million, compared with last year's $52.4 million.

The company managed to cut its costs by 12 percent.

President Alejandro De Tomaso attributed 1985's improved profit picture to the inclusion of Maserati's results in the company's consolidated financial statements. The company increased its equity in Maserati to 90 percent on Dec. 31, 1984.

The merger of Maserati and Nuova Innocenti S.p.A. was finalized June 14. De Tomaso Industries' equity interest in the merged companies amounts to 65.19 percent, with the surviving company known as Maserati.

Stellar is hot in Canada for Hyundai

Continued from Page 3

is effective immediately. However, a new 6 percent duty on autos imported from developing nations won't take effect until Jan. 1, 1987.

A Hyundai Canada spokeswoman said it is "a little early" to decipher tradein patterns for the Stellar.

"Some are trading up and some are trading across," she said. "It will probably be fall before we can really tell."

The car is targeted at models like the Toyota Camry and Honda Accord, she said. List price for the Stellar SL four-door sedan with 5-speed manual transmission is $8,995. The GSL version retails for $10,495.

The Giugiaro-styled Stellar, which is based on Ford of Europe's Cortina, bears distinct European lines. Standard features on both the SL and GSL include a collapsible steering column, trip odometer, dual sun visors, remote trunk release, fully reclining front bucket seats and lumbar support adjuster.

Standard on the GSL edition are tachometer; power windows, door locks and outside mirrors; full cloth seat upholstery; styled wheel covers; tilt adjustable driver's seat and front headrests; rear-seat center armrest and headrests; rear reading lights, and other adornments.

A 5-speed manual transmission is standard on both the SL and GSL models.

The Stellar was responsive and provided a firm ride during a test drive. Front suspension is independent wishbone with coil spring. Rear suspension is 4-link type with taper coil spring.

The standard 1.6-liter overhead cam engine with viscous cooling fan is an in-line four built under license from Mitsubishi. Front brakes are disk, rear are drum.

With rack and pinion steering and turning radius under 18 feet, the Stellar is maneuverable. The car's -speed gearbox, with floor-mounted shifter, is smooth.

Fit and finish appear up to world standards. Metallic paint is optional on both versions.

Overall length of the Stellar is 179 inches, width is 68 inches and height is 54 inches. The Stellar's wheelbase is 102 inches, with a front track of 57 inches and a rear track of 56 inches. Curb weight is 2,337 pounds with manual transmission and 2,392 with automatic.

Senator says Iacocca could win Presidency

Continued from Page 2

ate have told him they would support Iacocca for the 1988 Democratic Presidential nomination if he chooses to run, according to the Detroit Free Press.

When asked to identify the senators, Riegle said, "I'm not going to name names, but some of them are pretty heavyweight. At least five or six senators from different parts of the country have said, 'That is very attractive,' and they would support him."

According to the Free Press, one of the senators is Carl Levin, Michigan Democrat, who suggested Iacocca for President at a NAACP dinner in Detroit in February. More than 7,000 people attending cheered Levin's remarks.

170 auto industry leaders average $579,928

Executive pay up 15 pct. for '84

Continued from Page 1

dramatic as increases in 1983. Only the Chrysler executives and one Dow Chemical Co. executive received increases of more than 100 percent, while most increases were significantly less. In 1983, Ford executives received the largest increases, amounting to more than 200 percent from the previous year.

In 1984, compensation for the executives of the auto companies continued to keep pace with the compensation for executives of the supplier firms. Eleven executives of the Big Three auto companies were among the industry's 35 highest-paid executives. Chrysler executives broke into the top 35 for the first time with three executives making the list.

In 1983, 10 auto company executives were among the top 35, while the year before only GM's top two executives were included.

Following Caldwell on the list of highest-paid executives in 1984 were: Harry J. Gray, chairman, United Technologies; Donald E. Petersen, president, Ford; Lee A. Iacocca, Chrysler; Paul F. Oreffice, president, Dow Chemical Co.; Robert Anderson, chairman, Rockwell International; Roger B. Smith, chairman, GM; Edward L. Hennessy Jr., chairman, Allied Corp., and Harold A. Poling, executive vice president, Ford.

Though most executives enjoyed higher compensation in 1984, three times as many saw decreases as in 1983. Nineteen executives showed drops in compensation in 1984, compared with only a half dozen the year before.

Among the companies whose leaders suffered declines in compensation were Fleetwood Enterprises, GenCorp (formerly General Tire & Rubber Co.), LTV Corp., Grumman Corp. and Owens-Corning Fiberglas Corp.

REPORTED INCOME OF BIG 4 EXECUTIVES

Executive, Position & Company	1984 Income	1983 Income
Lee A. Iacocca, chairman, Chrysler	$5.51 million	$648,858
Gerald Greenwald, vice chairman, Chrysler	$3.30 million	$1.10 million
Philip Caldwell, chairman, Ford	$4.08 million	$7.31 million
Donald Petersen, president, Ford	$2.44 million	$3.76 million
Roger B. Smith, chairman, GM	$1.86 million	$1.51 million
F. James McDonald, president, GM	$1.60 million	$1.35 million
W. Paul Tippett, chairman, AMC	$383,335	$607,116
Jose J. Dedeurwaerder, president, AMC	$284,920	$291,920

Figures include automotive-related income during 1984 as reported in proxy statements. Salaries, directors fees, benefits, income from stock options and stock bonuses with specific dollar amounts attached are included. GM figures include savings plan renumeration and Performance Achievement Plan bonuses. Ford figures include company contributions to stock savings plan. Bonuses for Chrysler executives are for 1983. Not included are Chrysler stock options which were to be exercised by given dates.

It should further be noted Caldwell retired in February, replaced by Petersen as president. Harold Poling replaced Petersen as president. Tippett recently stepped down as an employe chairman; Dedeurwaerder has been CEO since September, 1984.

TOP-SALARIED EXECUTIVES IN U.S. AUTO INDUSTRY

169	Norman A. Barkeley, executive VP, Lear-Siegler Inc. (FY ended 6-30)	301,667	NA
170	Robert J. Brotje Jr., executive VP, Champion Spark Plug Co.	300,000	NA

NOTE: List is compiled from proxy statements of publicly traded companies, which contain compensation for five top-paid executives. Figure includes salary and bonus, not stock bonuses, stockoptions, profits from stock options exercised, nor long-term and contingent remuneration. Salaries and bonuses awared are for calendar 1984 unless otherwise noted.

1—Ford Chairman Philip Caldwell retired Feb. 1, 1985. Donald E. Petersen, formerly president, became chairman. Harold A. Poling, previously executive vice president of North American Automotive Operations, became president.

2—Was vice chairman and president of Marathon Oil, purchased by U.S. Steel Corp. in 1983.

3—Signal Cos. Inc. is in the process of merging with Allied Corp.

4—Promoted to president in 1984, replacing Robert Carlson who left the company

5—Union Texas Petroleum became an independent company in a leveraged buyout in April with Geltz as its CEO.

6—Promoted to vice chairman from executive VP.

7—GenCorp. formerly was General Tire & Rubber Co.

8—Named president in 1984

9—Tippett was chairman and CEO until September, 1984 when President Jose Dedeurwaerder became CEO. Tippett since has become a non-employe chairman and has become president of Springs Industries.

10—Was senior VP during 1984.

Ford-Australia turbocharges its Laser

Top performer in Ford of Australia's Laser range is the limited-edition Laser Turbo which features all-white exterior paintwork, sport seats and trim and identifying graphics.

Success of belt-law drive dims prospects for air bags

Continued from Page 3

phased into all cars sold in the U.S. beginning with the 1987 models. The requirement will be rescinded if states with two-thirds of the U.S. population enact seat-belt-use laws by April 1, 1989.

"Based on the first year's record following the passage of the first seat-belt-use law by the State of New York, we estimate that at least half of the 50 states will have such laws in place by the end of 1986," Martin said.

Should all the states that are considering seat-belt-use laws pass such legislation, it is very likely that the Department of Transportation's passive-restraint requirement would be voided.

States that have passed seat-belt-use legislation and the effective dates of those laws are:

New York, Dec. 1, 1984; New Jersey, March 1, 1985; Illinois, July 1, 1985; Michigan July 1, 1985; Texas, Sept. 1, 1985; Nebraska, Sept. 6, 1985; Missouri, Sept. 28, 1985; North Carolina, Oct. 1, 1985; Hawaii, Nov. 1, 1985; New Mexico, Jan. 1, 1986; Connecticut, Jan. 1, 1986; Lousiana, July 1, 1986; Oklahoma, Feb. 1, 1987, and Indiana, July 1, 1987.

Shop volume shows 2nd-best gain of 1985

Continued from Page 1

percent over last year in May sales of shop parts, those used on customer-paid and warranty repairs, while sales of all parts and accessories were up 6.1 percent. The number of repair orders written during the month showed a gain of 6 percent.

For the first five months of the year, total service and parts volume increased 10.4 percent over the like period a year ago. At the same point in 1984, however, shop business was 19 percent higher than the previous year.

Through May, the strongest indicator was total labor sales, customer-paid and warranty, which were up 13.5 percent over the like year-ago period.

In the runnerup spot, with an increase of 10.7 percent, was sales of shop parts, those used on customer-paid and warranty repairs. Gross profit on all labor and P&A business was a close third, with an increase of 10.2 percent over last year.

The number of repair orders written through May was 9.5 percent higher than a year ago. Sales of parts to outside customers showed a gain of 8.3 percent over last year, while sales of all parts and accessories were up 6.9 percent.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's franchised new-car dealers.

Dedeurwaerder meets with dealers, top management

AMC chief maps a survival plan

Continued from Page 3

holders and the press we never had any intention to sell Jeep," said Dedeurwaerder. "And if the chief executive officer of Renault sends me a letter—which I made public—saying he backs up his involvement, what else can we do?"

To effect efficient auto production in Wisconsin, Dedeurwaerder said, the company does not require a new, modern facility in Kenosha to go with its scaled-down labor costs. Some portions of the Kenosha plant were built at the turn of the century.

With the company's labor problems in Wisconsin apparently settled, the AMC president said the company must now determine whether "the state is giving us a competitive situation compared with the rest of the states."

"That's what we did with the union," he said. "I don't see why we can't do that officially with the state."

Discussions are expected to revolve around improvement of the state's rules regarding unemployment and workers' compensation, which Dedeurwaerder said place "a big burden on a company our size."

"Thirty-five states in the U.S. are making offers to GM for Saturn," he said. "I say, before you take Saturn, guys, you'd better watch that the one that you have is not going to go away."

• Dedeurwaerder said AMC lost more money in the second quarter than in the first. Overall, he characterized 1985-86 as a "break-even type of situation."

"We will not have anything substantially more to sell except our Jeep (Comanche) truck this year," he said.

Dedeurwaerder said 1987 will be the company's big breakout year.

The centerpiece of product plans is the front-wheel-drive intermediate due to be built at the plant currently under construction in Brampton, Ont. Plans call for production of about 150,000 mid-sized cars annually.

While AMC currently imports from Renault in small numbers—just over 12,000 units in 1984—the new compact line scheduled to arrive in early 1987 is counted on as a mainstream product.

The Alpine, a relatively low-volume specialty car expected to be priced in the $30,000 range, was once slated for U.S. introduction late next summer. But the stateside launch has since been rescheduled. The car is not due to be unveiled here until spring, 1987.

"We pushed it back a good three months," said Dedeurwaerder. "We believe that having the car available and doing a marketing operation in the Christmas period is not very smart."

Dedeurwaerder said it is too early to discuss reports from France that Renault will loan its U.S. partner an estimated $175 million through 1987. He said the transaction requires approval from the Renault board of directors and the French Ministry of Finance.

"There is nothing to say on the AMC side," he said. "As soon as Mr. Besse has worked it out on his side, then we will work it out with the board of directors of American Motors."

Asked if he expects to be named AMC chairman at the company's board meeting in New York later this week, Dedeurwaerder declined comment.

"I'm happy," he said. "I'm just trying to do my job and I have all the tools in hand to do it with a good crew of guys."

AMC Chairman Paul Tippett has left the company to become president of Springs Industries, a South Carolina-based textile manufacturer. Tippett, whose final day at AMC was last Friday (July 11) has said he expects to stay on as an AMC board member. There is some speculation that he may remain as a non-employe chairman of the company.

Worker takeover of Ford Argentina plants continues

PACHECO, Argentina.—Workers at Ford Motor Co.'s car and truck complex here continued their 18-day-long siege of the complex, and at presstime negotiations with management had ground to a halt.

The takeover began June 26, when hourly workers kept the plants' 1,800 salaried workers against their will. Women were released at the normal quitting time, but the men were held until past midnight, when a judge came to the building, a Ford spokesman said.

On June 30, Ministry of Labor officials declared the takeover illegal. Afterwards, the hourly workers told all salaried workers to leave, and they have maintained total control of the complex ever since, he said.

The takeover, headed by the worker-elected Internal Claims Committee, which is not a union, was said to be in response to Ford's firing of 33 chronic absentees.

Late last week, the workers began producing cars on their own and invited the press to witness the operation. Six or seven cars were built the first day, July 11, the Ford spokesman said. Parts inventories would allow them to continue for no more than four days if they are able to operate all machinery, he said.

The same day, Ford management was cabled by the committee that it should return to the plant and reassume control. But when its first order—to vacate the plant—was rejected by workers, management left.

Almost all of the 4,000 hourly workers are involved in the siege, with about 1,500 at the plants at any one time, Ford said.

An Argentine judge is studying whether to indict workers on criminal charges, and Ford hopes such an indictment would lead to an end of the siege.

Ford dealers taken out to the ball game

Three Kansas City District Ford dealers enjoy a ride around Royals Stadium in a 1985 Mustang on Lifetime Service Guarantee Day. In the back seat are, from left: Bob Hewlett, Metro Ford, Independence, Mo.; Bob Balderston, Blue Springs Ford, Inc., Blue Springs, Mo., and Frank Schlozman, Schlozman Ford, Overland Park, Kans. Standing to the left of the car is Bob Pourifoy, zone service manager, and behind the wheel is John Whelan, service operations manager.

GM increasing programs to reduce advertising costs

Continued from Page 3

media people, and even some GM insiders, also rankled at developments attributed to McKinsey and the media council.

As part of its ongoing effort to cut costs, GM established a Media Advisory Council and has changed the way it will buy time and space.

GM first tackled television, assigning point ad agencies to negotitate with networks on behalf of all other GM agencies and corporate or divisional clients (Automotive News, May 13).

Next, GM tackled magazines, assigning point agencies to negotitate with publishing companies for maximum discounts on behalf of all GM units that buy consumer magazine space (Automotive News, May 27).

While the television network buying realignment caused a ripple, the proposed changes in the magazine segment has caused strong reaction.

"There are two approaches you can take," said one Detroit sales rep. "You can look at this as an attempt by the big guy to crush the little guy, or you can look at it as an opportunity."

GM's approach has been direct; it wants to convert everything to the maximum cash savings.

As part of the new procedures, the Magazine Negotiating Team, a Media Council subcommittee comprised of agency media people, drafted a 14-point list of purposes and goals which went out with a form letter to consumer magazines in which GM buys space.

Each publication was called in for a "five-year" review by its point agency.

The proposals included items ranging from the elimination of "bleed" charges to a demand for corporate-wide discounts rather than divisional discounts, discounts based on dollar volume rather than page counts and smaller increments in rate structure discounts.

GM also wants insertion contracts to run on a model-year basis, rather than a calendar-year basis, multi-title discounts from publishing companies with more than one magazine, multi-year contracts and conversion of merchandising allowances into lower rates.

In addition, GM said it is "interested in reviewing any unique rate structures" that might be proposed. Some Detroit magazine reps told Automotive News they viewed that as an open solicitation to break ad rate cards.

Finally, GM said it was encouraging "multi-media" discount proposals. That means it could be particulalry tough with CBS and ABC, both of which have publications in addition to television and radio networks.

Although no one has said GM has threatened to pull its advertising if a publication refuses to acquiesce to the new guidelines, Detroit media people believe that is an implied threat.

"If they don't put some teeth into it, how will they enforce it?" one rep said.

Nonetheless, a number of publications last week told Automotive News they already had indicated to GM they would not go along with the program.

However, the final determination of how many consumer books eventually do change the way they do business with the giant auto advertiser could well hinge on what Time, Inc., ultimately decides to do.

Time, as a corporation, is dealing with Campbell-Ewald as point agency. Time has three publications—Sports Illustrated, Time and People—which are important automotive ad vehicles as well as a number of other smaller publications.

Because of ad revenue involved, Time, Inc., has more to lose if it refuses to acquiesce and GM cuts its insertion orders.

"Ultimately, it depends on what Time does," said a competitor. "Right now, it looks like Time is digging in its heels."

John downplayed the importance of the Time, Inc., negotiations, pointing to other large publications, "like Reader's Digest and TV Guide," which make the situation "broader than that."

Time has put the utmost importance on the situation. People publisher S. Christopher Meigher III confirmed there were "ongoing discussions" with GM and Campbell-Ewald, but said the matter was being handled at the magazine group level.

Ford, Nissan, Volkswagen due to reopen today

Auto production climbs to 134,844

By Louise Kertesz
Detroit Reporter

Rebounding from the holiday period—but at a pace still reduced by plant closings—U.S. auto production was pegged at 134,844 units last week, 58.01 percent more than the previous week's 85,337.

Last week's targeted build was 16.25 percent more than the year-ago-week's 115,996.

So far this year, 4,631,381 cars have been assembled, 3.37 percent more than the 4,480,410 completed last year at this point.

Companies shared last week's estimated production as follows: General Motors, 73.88 percent; Chrysler Corp., 21.02 percent; American Motors, 2.04 percent; Honda of America Mfg. Co., 1.85 percent, and New United Motor Mfg. Co., 1.21 percent.

Plants of Ford Motor Co. and Nissan Motor Mfg. Co., U.S.A., were closed last week for their second week of vacation, and Volkswagen of America's plant was idled for a second week by a parts shortage.

The plants are scheduled to resume production today (July 15).

A fire in a second-floor storage area at GM's Fiero plant in Pontiac last Wednesday night (July 10) resulted in the loss of 1,000 plastic car hoods, according to a GM spokesman.

There was no damage to the facility, and production was not affected, the spokesman said.

GM's Norwood (O.) plant, which produces the Chevrolet Camaro and Pontiac Firebird is down this week for model changeover, idling 3,300 workers.

It is scheduled to resume production Aug. 12.

Two overtime shifts were scheduled Saturday (July 13) at GM plants in Lakewood, Ga.; Wilmington, Del.; Detroit, and Lordstown, O.

Ford plants scheduled to work daily overtime this week include: Chicago; Lorain, O.; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler's plant in St. Louis (No. 2) is scheduled to operate two nine-hour daily shifts this week.

Toyota faces tough choices in strategies for U.S. plant

Continued from Page 1

the plant. Both the Accord built by Honda in Ohio and the 626 planned by Mazda in Michigan go to the heart of the basic compact-to-midsize car market in the U.S.

The Camry is scheduled for its next major makeover in 1987, which would give Toyota one year of production experience with the new car before moving into a U.S. plant by 1988.

Toyota is also planning a car larger than the Cressida for the U.S. market. That vehicle is being designed by Calty, Toyota's U.S. design studio, and would be larger than anything currently sold by the company in Japan. Because of size restrictions, it would be an export-only model for the U.S. and possibly Europe.

Indications are that the car will be built in Japan, but once a U.S. plant is up and running, it could conceivably be built here because of its U.S.-only status.

As for utilizing NUMMI, officials at the plant and General Motors confirm that Chevrolet is to receive all the output from the plant up to the 250,000-unit limit set forth in the FTC agreement authorizing the joint venture. Using two shifts, that figure is the maximum for one line.

However, the Fremont facility, which produced cars and trucks for GM on two lines, has sufficient space to accommodate a second line that could be used to supply Toyota Motor Sales, U.S.A., with Corollas.

It doesn't appear likely that Toyota would assemble the Sprinter at NUMMI, since part of the FTC agreement calls for GM to sell a model that is not currently offered in the U.S.

In fact, the decision to add a second line at NUMMI may be less critical and more easily made than the decision for a greenfield site. If the market sours and price competition becomes fierce in the small-car market or if restraints continue for a sixth year, Toyota can put off or start up a second line at NUMMI much more quickly than starting or stopping a new plant site.

One thing is clear, however: Toyota is intent on retaining its premier position in the U.S. In the light of extended quotas and the fact that all of its major competitors have either begun or have announced intentions of building cars in the U.S., it is just a matter of time before Toyota lets the other shoe drop.

Truck production jumps 64 percent after holiday week

Domestic truck makers planned to build 42,458 units last week, 64.23 percent more than the previous week's 25,852 (shortened by the Fourth of July holiday and plant vacations) and 14.03 percent better than the year-ago week's 37,235.

So far this year, 1,854,302 trucks have been assembled, 10.02 percent more than the 1,685,473 completed last year at this point.

Plants of Ford Motor Co., International Harvester and Nissan Motor Mfg. Co., U.S.A., were closed last week for their second week of vacation. They are scheduled to resume production today (July 15).

General Motors plants working two overtime shifts Saturday (July 13) were: Pontiac No. 5; Moraine, O.; Flint No. 2, and Baltimore.

GM's Detroit plant is closed this week for inventory adjustment, idling 500 workers. It is scheduled to reopen July 22.

Ford's Twin Cities plant will curtail production this week to allow renovations to be completed. Two shifts will each work 24 hours at the facility.

Ford plants working daily overtime this week are: Wayne, Mich.; Kansas City; Norfolk; Lorain, O., and Louisville.

Ford's Kansas City plant is scheduled to work overtime Saturday (July 20).

Canada output still affected by vacations

Vehicle production in Canada continued at a slowed pace due to vacations at several plants.

The makers scheduled assembly of 14,525 cars last week, 2.89 percent fewer than the previous week's 14,958, but 10.05 percent more than the year-ago week's 13,198.

So far this year, 576,998 cars have been assembled, 6.52 percent fewer than the 617,271 completed last year at this time.

Truck makers planned assembly of 13,090 units last week, 12.96 percent more than the previous week's 11,588.

The prior week's total was the lowest weekly production this year, due to the Canada Day holiday and plant closings for vacation.

Year-to-date, 485,578 trucks have been assembled, 5.93 percent more than the 458,408 completed last year at this point.

American Motors' Brampton (Ont.) plant has been closed for vacation since June 24. It is scheduled to resume production Aug. 5.

Ford Motor Co. and International Harvester Co. plants are scheduled to resume production today (July 15) after being closed for vacation for two weeks.

Will publicity binge result in Saturn fiasco?

By Marjorie Sorge and Michelle Krebs
Automotive News Staff

General Motors' Saturn project may not live up to the public's expectations.

Never has a car project received so much publicity as has Saturn, causing some to wonder if all the attention is deserved.

Now, General Motors insiders are worried lest all the publicity may be too much of a good thing.

They fear that Saturn, which has been called the ultimate everything, may turn into the ultimate public relations fiasco.

News Analysis

Some fear that the public, expecting Star Wars technology on the car, will be disappointed with a vehicle that has features which will be commonplace by the time it is introduced at the end of this decade.

At first, the free publicity seemed like a public relations person's dream come true.

Governors paraded through GM corporate headquarters, offering the auto maker the world to locate the Saturn plant in their states. Schoolchildren wrote letters begging GM to put the plant in their state.

Still, after more than six months of reading and re-reading state proposals, the Saturn site remains a mystery. But it is a mystery that has fueled more automotive press than anything since Henry Ford introduced mass production.

The press has had a heyday. As the site selection choices are narrowing, every rumor is being reported. Some newspapers have set up rumor control centers on their business pages and have sent teams of reporters to tour the top-contending states.

The publisher of a Tennessee weekly issued a "stop the presses" order when convinced that an announcement that GM had selected his state for the Saturn site was imminent.

The public appears to recognize Saturn as a car, a plant and jobs, not a manufacturing process.

As for the car itself, the public —which doesn't care how a car is built—will measure Saturn's success by the items it can see and

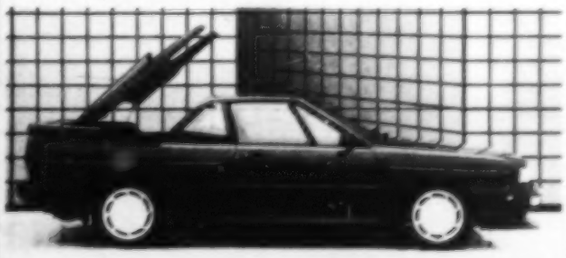
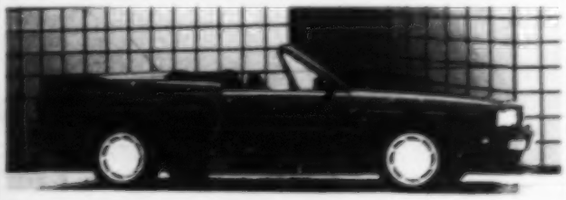
Audacious Audi

It changes before your eyes

This Audi Quattro Roadster, modified in West Germany by Treser GmbH, is being imported into the U.S. The Roadster has a fixed glass hardtop that stores beneath the rear deck lid. It will sell in the U.S. for about $60,000. Story, another picture are on Page 8.



The decklid lifts to accept top for storage.



With hardtop stowed, Audi becomes an open car.

NHTSA to reduce CAFE to 26 MPG for '86 cars

By Jake Kelderman
Washington Reporter

WASHINGTON.—Citing the possibility of "severe adverse economic consequences" for General Motors and Ford Motor Co., NHTSA has decided to reduce the Corporate Average Fuel Economy standard for the 1986 model year from 27.5 MPG to 26 MPG.

The proposal, in response to a petition filed by the Big Two and other auto makers, was immediately hailed by GM and Ford as a step in the right direction but less than what they need.

Both companies have been selling a greater than usual number of large, less-fuel-efficient cars during the past year. That has put them farther behind federal fuel-economy requirements than they had anticipated.

Recently, their past CAFE numbers were adjusted by the EPA, but both makers still faced the possibility of large fines for failing to meet the 27.5 MPG standard imposed by NHTSA for 1985 and beyond.

• GM, for example, expects to be approximately $478 million in arrears to the government for failing to meet CAFE requirements in 1984 and 1985, in spite of the EPA adjustments.

Ford is projecting that it will be even with the government through the 1985 model year but had expected to be in arrears for the 1986 model year unless the 27.5 MPG standard was reduced.

For planning flexibility and to cover the possibility of continued demand for large cars, both GM and Ford had asked NHTSA to ease the CAFE standard to 26 MPG for the next three years.

NHTSA has the authority to lower the standard to 26 MPG for good cause under authority of the 1975 Energy Policy and Conservation Act which established the standards and set penalties of $5 per tenth of a mile per gallon times an auto maker's annual production for failing to meet those standards.

In proposing the new standard, NHTSA said 26 MPG was the "maximum feasible" level the auto makers could achieve for that year, but NHTSA said it expected to entertain petitions from Ford, GM and others to keep the 26-MPG standard for 1987 and 1988.

It will hold hearings on its proposal for the 1986 model year in Washington Aug. 8-9.

According to papers on file with the agency, GM expects to reach a 25.7 MPG CAFE in 1986 and Ford a 26.2 MPG level. Some European makers would also be helped considerably by the planned rollback.

BMW, for example, is projecting a 1986 CAFE of 26.1 MPG. Volvo is looking to reach 26.5 MPG; Peugeot, 25.6 MPG; Saab, 25.4 MPG, and Jaguar just 19.2 MPG.

Mercedes-Benz has not as yet projected its MPG for the 1986 model year, but reached just 23.4 MPG in the 1985 model year after having been as high as 26.5 MPG in 1983.

Reaction from the interested parties was along the line of their previously stated positions.

At GM a spokesman reiterated the company's position that the CAFE issue was in fact a jobs issue, not an energy issue.

Noting that at a maximum, the adjustment the company had asked for would have resulted in

Bertone attacks IAI for X1/9 ills in U.S.

By John A. Russell
New York Staff Writer

NEW YORK.—After months of silence and outwardly amicable relations, Bertone representatives slammed International Automobile Importers and the way that company marketed the Italian coachbuilder's X1/9 sports cars in the United States.

Bertone claimed it lost more than $5 million on the project, had to shut down its production line in Turin for a year and suffered a "deep wound" because it relied on a IAI marketing strategy which did not work.

Now Bertone has its own distribution system, established in the U.S. after it severed its relationship with IAI, a subsidiary of Bricklin Industries chaired by Malcolm Bricklin.

The Bertone charges come at a bad time for Bricklin. Bricklin is planning to import and distribute the Yugo, a low-priced sedan built by Zastava, in Yugoslavia. The first dealers have been appointed, and introduction is scheduled for this fall.

All statements at the time of the breakup, in late October, 1984, indicated the two companies parted ways on a friendly note. But now Bertone says it dropped IAI as its importing and marketing arm because it was dissatisfied with IAI. Representatives cited many problems, including large inventories and warranty problems. The credibility of Bertone was brought into question since the car was priced too high, a Bertone source said.

Bruce McWilliams, a spokesman for Bertone in the U.S., told Automotive News many meetings were held to "find a way out of the morass." Finally Bertone had to "bite the bullet" and go it alone, he said.

Bertone recently completed its import organization in the U.S. by appointing seven independent importers serving various sections of the country. It also reduced the price of the car from the IAI price of more than $15,000 to $9,995 by eliminating luxury items such as leather interior and air condition-

Import stock is fattest in 28 months

By Kathleen Hamilton
Assistant Managing Editor

Inventories of new imported cars climbed to a 28-month high on July 1 as supplies of Japanese cars continued to increase, reaching a two-year high.

But the imports continued to be sold as quickly as they were unloaded on U.S. shores in June, so the days-supply level remained short: 31 days. That's just about the same place it has been since the start of the year. An ideal supply of imports is usually considered to be 60 to 75 days.

The inventory of imported cars in ports, in transit and at dealerships stood at 310,221 on July 1, the highest level since March 1, 1983, when the count was 316,745, a 41-day supply.

The latest stockpile figure is up

Chrysler to recall 129,000 Mitsubishi cars

WASHINGTON.—Chrysler Corp. will recall 129,000 1981-82 Mitsubishi-built Colt and Champ cars for failure to meet federal emissions standards. The cars are equipped with either 1.4-liter or 1.6-liter four-cylinder engines. Chrysler will adjust carburetors on all the cars and will modify ignition timing on the 1981 models.

Pre-tax profit sets record

Taxpayer Chrysler earns $596 million

By Michelle Krebs
Financial Editor

Chrysler Corp. reported record second-quarter sales and pre-tax profits though net income dropped.

Because the company resumed paying taxes, net income dropped 26 percent to $596 million, or $5.02 per share, compared with $803 million, or $6.48 per share, in the same quarter in 1984.

The company provided for $256 million in taxes, while in 1984 it used $352 million tax-loss carryforward from its years of no profits.

Pre-tax earnings for the second quarter of 1985 were $852 million —Chrysler's best-ever quarter. That compared with $804 million in 1984's second quarter.

Sales for the quarter were $6.0 billion, also an any-quarter record. Chrysler's former quarterly peak for sales was $5.4 billion in the first three months of this year. Second-quarter sales were up 14 percent from 1984's $5.3 billion.

For the first six months of 1985, Chrysler reported net income of $1.1 billion, compared with $1.5 billion in the first six months of 1984. Taxes for the first half of 1985 amounted to $473.1 million. Chrysler paid no taxes in the first half of 1984.

Sales for the six months totaled a record $11.4 billion, compared with $10.2 billion in 1984. It was Chrysler's best six-month period.

Total vehicle sales for the quarter amounted to 618,463, up 12 percent from 554,660 in 1984's second quarter.

For the six months, Chrysler sold 1,165,510 cars and trucks, up 9 percent from 1,071,332 in the same period a year ago.

Chrysler's market share was 12.7 percent for the six-month period, compared with 11.5 percent last year.

Chairman Lee Iacocca attributed Chrysler's performance to its hot-selling minivans, convertibles and turbocharged vehicles.

"Chrysler convertibles so far this year matched everyone else combined," he said at a press conference announcing the earnings. "Turbochargers sold more than the whole world combined."

Chrysler Lebaron GTS and Dodge Lancer sales doubled in the second quarter over the first quarter, Iacocca noted, because of incentive financing.

Iacocca added Chrysler's productivity was up 7 percent in the first six months compared with last year.

Iacocca estimated that finance incentives and the company's "Thank You America" promotion cost the company $100 million in additional profits. However, he added, those promotions increased Chrysler's volume.

Ford builds its millionth Sierra in Europe

Surrounded by Ford Dagenham (England) plant employes and family members, Bryan Gould, at left leaning against car, Member of Parliament for Dagenham, and Roger Humm, wearing striped tie and standing to the right of car, director of sales for Ford of Britain, view the one-millionth Ford Sierra manufactured in Europe. The Sierra was introduced at the Paris Auto Show in 1982.

McCurry vows to keep Toyota in first place

By Matt DeLorenzo
Los Angeles Reporter

NAPA, Calif.—Vowing to keep Toyota in first place in imported car and truck sales, Robert McCurry, senior vice president of Toyota Motor Sales, U.S.A., said he expects car sales this year to top 600,000 and trucks to reach 300,000 for the first time.

"It now looks like the industry will hit 10.7 million in car sales this calendar year, up more than 300,000 from last year," he said. "That's considerably more than most people, including us, were forecasting at the start of the year.

"A very early look at next year shows the market staying at just about the same level."

Despite the anticipated sales records for Toyota, McCurry said he's disappointed with the fifth year of the Voluntary Restraint Agreement.

"Obviously, from the profits the domestics have been rolling up and some of the acquisitions they've made recently, they don't need the protection," McCurry said. "As for allocations, we feel we got less than our fair share."

An increase of only 11 percent in car shipments (to an estimated 617,000) coupled with the U.S. manufacturing capacity of Honda and Nissan, its two closest competitors, means that Toyota faces a serious challenge to its top ranking in import-car sales.

According to McCurry, "1985 will go down to the wire for the sales leadership title in cars. Let me say right now that Toyota intends to be the number one import in 1985. We've won the import 'Triple Crown'—first in cars, first in trucks and first in combined car and truck sales—for the past nine years, and we're not giving up any portion of it without a fight."

McCurry complained that the

DOE analysis detects move to smaller cars

By Jake Kelderman
Washington Reporter

WASHINGTON.—Although conventional wisdom holds that America is going back to the big, less fuel-efficient car in the face of an eased energy situation, in fact the contrary is happening.

According to a new report by the U.S. Department of Energy, the sales-weighted average fuel economy for all new cars (domestic and imports) bought between October, 1984, and March, 1985, improved by 0.6 MPG from the same period in 1984.

The latest average is 26.9 MPG, or 0.6 MPG short of the 27.5 MPG fuel economy level each of the major auto makers is required to achieve for the 1985 model year.

A similar development occurred in the light-truck market, where the new fleet hit a sales-weighted fuel-economy average of 20.48 MPG. That was a 0.4 MPG improvement from the 1984 period.

Explaining the fuel-economy improvement, researchers at DOE noted, "Unlike the previous model years, the first six months of model year 1985 experienced a reversed trend; more compact cars were sold than midsize cars."

They went on to say that the domestic makers were largely responsible for the improvement in the fleet average. Import models showed a significant worsening in their fleet average, the researchers said.

Domestic cars showed an improvement of nearly one MPG (actually 0.87 MPG) from the previous model year through wider use of lockup transmissions, smaller engines and shifts to smaller vehicles, the DOE report says.

Import vehicles, on the other

Pontiac eying 2-seat Trans Am in spirit of GTO

By Dan McCosh
Detroit Reporter

Pontiac is working on an ultralight, two-seat version of the Trans Am which could add the spirit, if not the actual name, of the old GTO to the 1987 performance-car derby.

While Pontiac has not yet committed to putting the car into production, sources close to the program say it is a notchback, two-seat version of the current Trans Am that weighs several hundred pounds less then the current model. The weight savings is meaningful mainly for competitors interested in IMSA showroom stock racing, where the Trans Am already is extremely competitive.

The lightweight Trans Am is reminiscent of the original stripped-down, high-performance GTO that established Pontiac's performance image in the 1960s. It adds yet another potential competitor to the planned 1987 introduction of high-output, specialty cars by Chrysler Corp., General Motors and Ford Motor Co. They promise to make it a watershed year for new-generation muscle cars.

Chrysler plans a special-bodied, turbocharged version of the Dodge Daytona with a 225-HP engine.

Pontiac is working on a 226-HP version of the 2.8-liter V-6 Fiero, and Ford is anticipating the introduction of a 227-HP, 16-valve V-6-powered Taurus with special suspension and body components.

Price hikes under way on '86 cars

By John K. Teahen Jr.
Managing Editor

Price season has begun in the domestic auto industry.

It was a full-fledged effort at American Motors (Automotive News, July 15), a trickle at General Motors and a bare-bones 30-word statement at Chrysler Corp. Ford Motor Co. had not spoken up at presstime.

It's difficult to place an industrywide handle on the 1986 price hike at this moment, but 2 percent to 3 percent is an early-season estimate. In hard cash, about $300.

That's on a comparably equipped basis—after the makers finish yanking off a strip of molding on one model and adding a wheel cover or a fancier radio on another.

On an unadjusted sticker-to-sticker basis, the 1986 models are likely to be 4 or 5 percent more than the 1985 cars.

For the Big Three, a 2-to-3-percent boost would be a bit more than the one applied a year ago. At that time, the announced upswings were 1.2 percent for Chrysler, 1.3 percent for Ford and 2.3 percent for GM.

GM last week announced 1986 prices for its N-cars (the GM20 models), both for the carryover coupes and the brand-new four-door sedans.

Not to be left behind, Chrysler issued a 30-word statement: "Chrysler Corp. today anounced tentative price increases averaging 2 to 3 percent for its 1986-model passenger cars. Firm prices will be announced when the new cars are introduced in October."

Chrysler also sent tentative 1986 fleet prices to dealers, showing hikes of 2 percent to 7 percent, with the higher figures including additions to the standard equipment list. The fleet bumps on Omni/Horizon and Aries/Reliant were 2 percent

The coupes in GM's N-car lineup are up 3.22 percent after adjusting for equipment additions and 5.43 percent on a straight sticker-to-sticker comparison.

The 1986 Pontiac Grand Am coupe is $8,549, up $400; the Oldsmobile Calais is $9,283, up $614, and the Buick Somerset Regal is $9,425, up $399. Those are increases from the base 1985 stickers.

GM said an AM/FM stereo radio is standard on the 1986 Calais and full-wheel covers are standard on the 1986 Grand Am.

Sticker prices of the new four-door sedans in the N-car lineup are $8,749 for the Grand Am, $9,478 for the Calais and $9,620 for the Buick Skylark, which is the sedan designation for Buick.

Prices were boosted on some N-car options. Automatic transmission rose to $465 from $425, and the V-6 engine climbed to $610 from $560.

GM priced the 1986 N-cars because they are already in production and are being shipped to dealers.

Earlier, American Motors issued tentative prices on its 1986 models, authorized selling before the official Oct. 1 introduction date and reduced the dealer discount on base models from 10 percent to 9 percent.

AMC said average-equipped Renaults will go up an average of $54, or 0.7 percent; Jeeps and Eagles will rise an average of $324, or 2.1 percent.

But it may be amending its position

NADA mum on fleet-subsidy plan

By John A. Russell
New York Staff Writer

NEW YORK.—NADA may be backing off its controversial six-point negotiating plan to enact federal legislation on fleet subsidies, but there is a wall of silence at the dealer association. The executive committee met late last week and the agenda was not revealed.

In recent weeks, the association appeared to be amending its position through correspondence with the dealers which Automotive News obtained.

This may be in reaction to reportedly heated objections by several dealer groups throughout the country which protested loudly when the association drew up its approach to negotiations with congressional leaders on introducing a bill that would address fleet subsidies.

Noticeably absent in the six-point program when it was introduced in mid-June was any mention of two-tier pricing which had been a key dealer demand.

Also, the program included a clause stating the association would go along with preemption of state legislation that would prevent states from enacting their own laws on subsidies. The approval of that approach by the NADA board of directors brough howls of protest from individual dealers and dealer associations throughout the nation.

According to sources, NADA leaders presented that program in several states in an effort to garner support. Reaction has ranged from polite listening and no action taken to statements that the groups cannot support any measure that does not include two-tier pricing.

The latest example is the Colorado Automobile Dealers Assn., which informed NADA President

Japan is the target

Bill seeks 25-pct. tariff on imports

By Geoff Sundstrom
Washington Reporter

Influential congressional Democrats introduced trade legislation last week that could add a 25 percent tariff penalty to the price of all Japanese imports, including autos.

The bill is intended to force Japan and certain other nations to reduce their huge trade surpluses with the U.S. and the world.

Based on 1984 data, Japan, South Korea, Brazil and Taiwan would currently be liable for the 25 percent duty. Hyundai cars from South Korea will go on sale in the U.S. early next year, and Kia models from that country are slated to be imported by Ford in 1988. General Motors will begin importing cars from Daewoo, of Taiwan, in 1987.

Nations with excessive trade surpluses can avoid the tariff penalty by removing tariff and non-tariff barriers deemed unfair by the U.S. Trade Representative's Office. Trade figures for purposes of the bill would be compiled by the U.S. International Trade Commission.

The bill was introduced by a coalition of key Democrats, including House Majority Leader Jim Wright, of Texas; Ways and Means Committee Chairman Dan Rostenkowski, of Illinois, and Richard Gephardt, of Missouri, who is a key member of the Democratic Leadership Council.

Senator Lloyd Bentsen, Texas Democrat, introduced the measure in the Senate.

The White House immediately denounced the bill as "protectionist" and implied that the measure would be vetoed by the President if it is passed by Congress.

However, backers of the bill believe the measure will continue to win support if the nation's trade deficit increases to a projected $160 billion this year. At introduction, the bill had 100 cosponsors in the House and a dozen cosponsors in the Senate.

Rostenkowski, whose Ways and Means Committee is now mired in reviewing tax reform proposals, said the bill would receive high-priority attention in the fall. Legislative procedures dictate that trade measures originate in the Ways and Means Committee.

House Majority Leader Wright told reporters he believed the budget and trade-deficit issues were the highest priorities facing the nation. Both Wright and Rostenkowski are said to be contenders for Speaker of the House when Massachusetts Democrat William (Tip) O'Neill retires in 1986.

Although Bentsen said the bill is likely to encounter its severest test in the Senate, he said he believes a strong vote in the House could produce a favorable Senate vote.

Earlier this year, both the House and Senate passed non-binding resolutions calling on Japan to reduce its barriers to American products. At that time, there was considerable bi-partisan ire over a spiraling U.S. trade deficit that has continued to worsen.

Two weeks ago Senate Finance Committee Chairman Bob Packwood, Oregon Republican, asked for Senate consideration of a bill approved by his committee that would force the President to take retaliatory action against nations that do not reduce trade barriers to U.S. goods. The bill has yet to be scheduled for floor action.

The latest trade bill, called the Trade Emergency and Export Promotion Act, calls on Congress to declare a national trade emer-

Saab-Scania of America manufacutures the buses in Orange, Conn.

Ford set to introduce long-delayed Aerostar

By Arthur Flax
Assistant Truck Editor

ST. LOUIS.—Ford Motor Co.'s oft-delayed Aerostar minivan will finally make it to dealer showrooms by the end of the month, the company announced at the "launch" of the new truck here last week.

Ford Chairman Donald E. Petersen indicated that the Aerostar was delayed to assure that production kinks would be worked out from the start.

He said, "All right, so Aerostar is coming to market a few weeks later than we planned four or five years ago. But we've accomplished so much more than our competition through the use of new technology that we're actually far ahead."

He said the St. Louis plant, which produced Ford Crown Victoria and Mercury Grand Marquis models until January, was "literally gutted" and an entirely new plant employing the latest in advanced technology was built in its place.

Although the St. Louis ceremony was Ford's official launch of the truck, production units have actually been rolling off the assembly line since May 31, and 2,000 have been shipped to dealers, according to Philip M. Novell, Ford Division general sales manager. Dealers, he said, may sell the minivans as soon as they arrive. They will be sold as 1986 models.

Novell said Ford has more than 40,000 dealer orders for the Aerostar with 12,000 pre-sold to customers.

Base price are $9,064 for the five-passenger Aerostar and $8,222 for the cargo van version. Novell said the passenger van will probably account for 60 to 70 percent of total production.

The Aerostar will initially be offered with a standard electronically fuel-injected 2.3-liter four-cylinder engine and an optional 2.8-liter V-6 that produces 115 HP. Next February, the new 145-HP, 3.0-liter V-6 engine, which will power the Ford Taurus and Mercury Sable, will replace the 2.8-liter engine as an Aerostar option, Novell said.

Daniel L. Rivard, Ford manager of light-truck product development, said the smaller engine, which is not related to the new 3.0-liter V-6, will continue to power Ford products but will be punched out to 2.93 liters as "Job 1" in 1986.

NHTSA won't reopen Ford Park-to-Reverse

By Jake Kelderman
Washington Reporter

WASHINGTON.—Saying there is no new technical evidence to support it, NHTSA has refused to reopen an investigation into whether millions of 1970-1979 Ford Motor Co. cars with automatic transmissions are prone to shift without warning from Park to Reverse.

The Center for Auto Safety asked for the investigation in March, saying that it was still receiving reports of fatalities involving the cars (an alleged 117 since 1980).

The safety group said it had new data indicating a "dramatic" drop in alleged fatal Park-to-Reverse accidents involving later-model Fords following a redesign of the Ford shifter system in 1980.

The latest development in this long-running case does not spell an end to it, however.

Clarence Ditlow, head of the safety center, said his organization will file suit in the U.S. District Court for the District of Columbia, seeking to overturn the NHTSA decision. It will be the second time the center has been in court on the Park-to-Reverse issue.

In October, 1980, NHTSA Administrator Joan Claybrook recommended that some 23 million 1970-era Ford Motor Co. cars should be labeled as having a safety-related defect.

But in an unusual settlement of the issue, the Department of

Dennis to handle Yugo and Niva in Canada

By Michelle Krebs
Financial Editor

Peter Dennis Motor Corp., formerly Lada Cars of Canada, has obtained the Canadian distributorship for the Yugoslavian-built Yugo and also will do final assembly for the Russian Niva in Canada.

David Hunt, the corporation's newly appointed deputy chairman, said Peter Dennis Motor Corp. has obtained the Canadian distributing rights for the Yugo, the low-priced, Yugoslavian-built automobile that will be imported into the U.S. by Malcolm Bricklin.

Hunt said that once U.S. Yugo operations are in full swing, operations in Canada will gear up.

The company will appoint 80 Yugo dealers throughout Canada. Sales volume for the first full year in Canada will be in the 6,000-to-8,000 range, Hunt said.

He said he sees the Yugo not as a direct competitor to the phe-

As underwriters screen clients more scrupulously

Dealers taking closer look at self-insurance

By Richard Johnson
Detroit Reporter

Auto-dealer risk managers are reportedly taking a closer look at self-insurance options now that underwriters in today's constricted property-and-casualty market have begun choosing dealer clients more carefully.

A combination of self-funding and purchased insurance for excessive losses is being hailed by some as an attractive alternative to the hazards of conventional carrier coverage, including dwindling capacity and rising premiums.

But several insurance professionals remain skeptical of self-funding by individual dealers or groups of dealers, citing high costs, high risks and the complexity of packaging comprehensive property and casualty plans.

Some industry observers cite a built-in resistance among auto dealers to insurance links with other dealers. But a general movement toward insurance restructuring in other commercial fields may portend the same trend in the retail auto business.

"There is a lot of pressure for self-insurance going on," said Roger Heckman, vice president—marketing and underwriting at Dealer Cover, Torrance Calif., which has designed a property and casualty program for dealer groups. "It is time for dealers through local associations and dealer bodies to begin to looking at this as an alternative."

Last of a Series

Self-funded programs can be tailored to either individual dealers or to groups of dealers sponsored by formal associations or loosely defined alliances.

Other risk alternatives include single-parent and group captive insurance companies, which are usually created by medium- to large-sized corporations interested in underwriting their own exposures. The option essentially involves getting into the insurance business, with the risk spread through reinsuring.

"There is a major insurance problem in this country as far as capacity is concerned," said James Kinder, executive vice president of the nonprofit Self-Insurance Institute of America, Santa Ana, Calif.

"There are many more restrictions on the type of risks companies are willing to underwrite. It is very difficult to find coverage and if you do, the question is at what price. But if you're talking about property/casualty exposures, price may not necessarily be the most important factor. It may be survival."

Industry pros say dealers have traditionally been less than desirable risks. High-loss-exposure operations have been heavily impacted by conditions in the commercial insurance market, where huge underwriting losses were reported last year.

Capacity has fallen off because of the collapse of a number of firms, lower returns on insurance companies' cash holdings and a slowdown of investor funds into the industry.

Carriers who have survived the

Beijing Jeep gears up for Cherokee production

Robert Steinseifer, director of enterprise management for Beijing Jeep Corp., Ltd., Beijing, People's Republic of China, is preparing for the Oct. 1 production launch of the U.S.-designed Jeep Cherokee XJ. The company is a joint venture between American Motors and Beijing Automotive Works.

Will it form a supply base for AMC in the U.S.?

A visit to Jeep venture in China

By Al Fleming
Industry Editor

BEIJING, People's Republic of China.—Beijing Jeep Corp., Ltd., has designated Oct. 1 as official production launch date for the U.S.-designed Jeep Cherokee XJ vehicle to be built here.

BJC is the joint-venture company started last year by American Motors and China's government-owned Beijing Automotive Works. AMC owns 31 percent of the operation; BAW, 69 percent.

According to Robert Steinseifer, director of enterprise management for BJC, only the base four-door, four-cylinder Cherokee XJ model, with four-wheel-drive, will be turned out. The vehicle will be called the BJ-213.

Steinseifer said production schedules call for 750 BJ-213s to be made in the fourth quarter of 1985. He said the production-launch target is 12 units a day, and later will climb to 18 a day.

Besides the BJ-213, the company will continue to build the BJ-212, a Russian-designed utility vehicle that has been produced here by BAW for many years; 17,000 were made in 1984.

Steinseifer said the Russian vehicle, which he terms "technologically outdated," is available only in one color—traditional army olive-drab—and will be phased out in three or four years. He said 21,000 will be built in 1985.

Noting that the BJ-212, all of whose parts are made in China, currently is priced at the equivalent of $10,500, Steinseifer said, "The 212 is very cheap; it's a 20-year-old vehicle. The XJ will cost more, but it's state-of-the-art. The plan is to phase out the 212 while boosting volume and reducing cost of the 213."

Meantime, the facilities that have been used to turn out the Russian vehicle are being completely revamped. To prepare for Jeep production, two new paint shops and expanded stamping facilities are being installed. Equipment for the body shop, which is being doubled in size, will arrive today (July 22) from the U.S., Steinseifer said, and body production will start shortly after.

The new paint operation, which will run two shifts, was launched in mid-July, with trim operations getting under way the last week in July.

A structure housing a new final assembly line will start receiving equipment July 27.

"It's a conveyorized moving line, modern in every way except that it won't be automated," Steinseifer said.

He said the new production-line equipment is like that used in Toledo, where AMC's U.S. Jeep manufacturing and final assembly plant is located. However, Chinese "hand labor," rather than robots, will be used in such operations as body welding and painting.

1st U.S.-built London taxi is piped off assembly line

By Jenny L. King
Detroit Reporter

MT. CLEMENS, Mich.—With a puddle of champagne beneath its grille and Scottish pipers stationed at the rear fenders, the first U.S.-built London Taxi sat at the end of the spotless assembly line here July 17.

Its keys were presented to Michigan Lieutenant Governor Martha Griffiths by Don Landers, president of LondonCoach and a veteran special-vehicles designer and builder through his company, PSI, Inc., also at the site.

This hybrid taxi looks like something out of the '50s, and in fact it is. The body was designed in the late 1950s in England where it has been built and used ever since. Landers' firm is the only licensed London Taxi production source outside the U.K.

The Mt. Clemens taxis are definitely Anglo-American, with about 50 percent of their content coming from U.S. sources, a point Landers emphasized. The bodies come from Carbodies of Coventry, England. They travel first to Germany, then are shipped with exports of Volkswagens and Audis to the port of Wilmington, Del.

Because they will be powered by Ford 2.3-liter engines, they must be towed from their ship berths to the backs of transports which bring them to this small city north of Detroit.

"The engine, transmission, wiring, battery, brakes are bought from U.S. companies and added in our factory," Landers said. "Some cities here have 'made-in-America' requirements.

"In Chicago, for example, we explained to the city's Taxi Commission that half the vehicle was of domestic content."

(Chicago has no regulations per se but the city wanted the specifics for future reference, according to a Taxi Commission spokeswoman.)

LondonCoach has a production target of 500 vehicles its first year. Landers said he plans to keep output at that level to control quality and service. Sales will be handled from Mt. Clemens and through regional sales reps in Washington, Boston, Detroit and a roving salesman, he said.

Powertrains, with 12,000-mile warranties, can be serviced by any of Ford Motor Co.'s 6,000 dealers, he said. LondonCoach also will set up authorized service outlets.

Landers made the decision to expand his business to include taxicab production a couple of years ago. The demise of Checker Motors Corp. in 1982, after almost 60 years in business, opened a niche in the market.

That void looked like an opportunity,he said, explaining his interest in building taxis.

"There's quite a difference between a vehicle built for taxi purposes and a regular production car altered to serve as a taxi. There even are stories of people standing in the rain, passing up rides in the latter to wait for a Checker-type car, with its room and passenger conveniences," he said.

The $19,610 London Taxi has room for seven persons and has a high enough roof for a graceful entrance and exit.

Corrosion protection includes galvanized steel panels in critical areas; use of zinc and aluminum-based paints inside door panels and wheel well surfaces; phosphate-processed steel to inhibit rust creep if painted surface is chipped, and an undercoating with protective wax.

Chrysler, Ford up; GM down

Early-July sales trail last year's

By Jenny L. King
Detroit Reporter

Early-July new-car sales, while short of the year-ago total by some 5,000 units, looked respectable when compared with July 1-10 sales during the past decade.

Traditionally, sales taper off during the summer months, with July down from June and May. The record for the early-July period is 214,912 in 1973.

Last year, 179,026 new cars were delivered during the period; this year, the total was 174,176. Ten years ago, the early-July total was 167,101.

Domestic sales this year were down 2.71 percent from 1984. On a daily-rate basis, they dropped 14.87 percent, to 21,772 from 25,575. There were eight selling days in the period this year, seven in 1984.

General Motors reported a 6.99-percent sales decline, slipping to 96,410 from 103,655. Ford Motor Co. was up 3.34 percent, to 45,803 from 44,323. Chrysler Corp. domestic sales of 23,631 were up 8.26 percent from 21,827.

American Motors reported estimated sales of 3,060, down 43.33 percent from last year's 5,400. Honda was up 9.09 percent, to 2,833 from 2,597. Volkwagen's 15-vehicle increase, to 1,239 from 1,224, figured to a 1.23-percent gain. Nissan Sentra sales were estimated at 1,200.

GM earned 55.35 percent of the early-July domestic market, dropping from 57.90 percent a year earlier. Ford captured 26.30 percent, up from 24.76 percent. Chrysler increased its share to 13.57 percent from 12.19 percent.

AMC sales accounted for 1.75 percent, down from 3.02 percent. Honda had 1.63 percent, up from 1.45 percent. VW held 0.71 percent, up from 0.68 percent, and Nissan earned 0.69 percent this year, its first on the domestic market.

Domestic makes reporting July 1-10 sales increases included Plymouth, up 4.46 percent; Chrysler, up 0.23 percent; Dodge, up 19.36 percent, and Ford, up 0.95 percent. Mercury was up 8.70 percent; Lincoln was up 5.82 percent; VW was up 1.23 percent, and Honda was up 9.09 percent.

At GM, Cadillac managed a record for the period along with a sales gain of 3.83 percent over the year-ago record. Cadillac sales numbered 7,213 this year compared with the previous high of 6,947 last year.

Buick sales plunged 20.88 percent, Pontiac was off 14.35 percent, Oldsmobile was down 3.41 percent and Chevrolet dropped 0.45 percent. AMC Eagle sales were off an estimated 25.00 percent while Renault sales dropped 44.80 percent. VW was up 1.23 percent and Honda climbed 9.09 percent.

Sales since the first of the year were up 1.43 percent, to 4,488,843 from 4,425,369.

Chevrolet's Celebrity was the top domestic nameplate July 1-10, with sales of 9,754. Ford Escort was second at 8,453, followed by Chevrolet Cavalier at 8,418, Oldsmobile Ciera at 7,306 and standard Chevrolet at 5,426.

Dennis gets Yugo in Canada; will build plant for Niva

Continued from Page 3

nomenally successful Hyundai Pony but as a vehicle to fill a gap in the lower end of the market.

Hunt also said final assembly of Niva, a Russian four-wheel-drive vehicle like General Motors' Jimmy, will be done in a plant in Halifax, N.S., with the first prototype scheduled as early as September. The subassemblies and bodies will come from Russia and will be put together in Canada.

The plant will employ up to 250 people and will turn out about 25,000 vehicles a year, which will be exported as well as sold in Canada.

A third prong of Peter Dennis Motor Corp.'s new strategy and redefined market thrust is to revitalize its Signet dealer network. Signet is the upgraded version of the Russian-built Lada.

Hunt said the dealer network deteriorated when the Lada nameplate was replaced by Signet. The Signet, base priced at under $5,000 (Canadian), has not caught on well in Canada and has been clobbered by competition from the Korean-built Pony.

However, Hunt said the number of Signet dealers will be increased from 85 to 100 in time for the spring, 1986, introduction of the 2108, a new series of Russian-built cars.

The 2108 is a Porsche-engineered, front-wheel-drive vehicle that will be offered first as a three-door hatchback and soon after as a five-door. The car is expected to be priced under $7,000 (Canadian), and sales volume is estimated at about 15,000 vehicles a year in Canada.

Another important part of Hunt's job will be to improve the image of motor vehicles imported from the Soviet Union.

A challenge will be to squelch rumors regarding the difficulty in obtaining parts for Russian-made vehicles. Hunt said his company has a 40,000-square-foot warehouse that will stock $10 million (Canadian) worth of parts, and the company has first pick of parts from Russia.

His first move will be to hire two parts people to make sure dealers have ample parts supplies.

In addition, increased use of Canadian-made components in the manufacture of the Russian-built vehicles will help their image, Hunt said.

He hopes for the same success he had with Satra Corp., the Lada importer in Europe, in which he established ties between British suppliers, most notably Goodyear, and the Russians. A deal already has been struck between Michelin in Canada and the Russians for tires.

Hunt also said GM transmissions will be used in the Niva, and discussions are in progress to purchase diesel engines from GM.

Mitsubishi dealer incentive hikes truck sales 56 pct.

FOUNTAIN VALLEY, Calif.—Cash incentives to dealers on all Mitsubishi pickup trucks will continue through July.

Dealers who sell 21 to 35 units during June and July get an extra $300 per unit. Sales of 36 or more earn $500 per unit. The program is non-retroactive. Mitsubishi truck sales rose 56 percent during the first month of the incentives.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

May total is highest in six years

Month's registrations up 3 pct.

By Jenny L. King
Detroit Reporter

New-car registrations continued their slow but steady climb in May, posting a 2.93-percent overall increase, a 2.00-percent domestic improvement and a 6.15-percent import gain.

Table on Page 32

The May registration total was only third best for this calendar year, down from both April and March. It was the best May in six years, though, with 911,932 new domestics and imports added to the rolls.

According to statistics from R. L. Polk & Co., there were 700,907 new domestic registrations in May, up 2.00 percent from 687,178 a year earlier.

May import registrations of 211,025 were up 6.15 percent from 198,796. Their share of the total market was up 0.70 percentage points, to 23.14 percent from 22.44 percent.

Record May registrations of 1,061,204 were reported in 1973. This year's total was the best since 1979 when 986,523 new domestics and imports were tabulated.

Chrysler Corp. and Ford Motor Co. joined the imports in increasing their shares of the May market. Chrysler was up 1.06 percentage points, to 10.77 percent from 9.71 percent last year. Ford's May share of the market advanced 0.81 percentage points, to 19.44 percent from 18.63 percent.

General Motors plunged 2.02 percentage points, to 45.52 percent from 47.54 percent, while American Motors shrank to 1.13 percent from 1.68 percent.

All three Chrysler makes—Dodge, Plymouth and Chrysler—were up, May to May. Ford's 1.21-percentage-point gain overcame losses in share for Lincoln and Mercury. Pontiac was the only GM make to improve its portion (up 0.71 percentage points); Buick dropped the most (down 1.02 percentage points).

The domestics-only May market included GM at 59.23 percent, Ford at 25.29 percent, Chrysler at 14.01 percent and AMC at 1.47 percent. Miscellaneous domestics, with 22, failed to earn even 0.01 percent of the market. A year earlier, there were 30.

Intermediate domestics represented the largest single piece of the total May market, with 29.22 percent. Imports were second with 23.14 percent, followed by compacts at 19.04 percent, subcompacts at 11.99 percent, standards at 9.26 percent and 7.35 percent.

The May, 1984, breakdown included intermediates at 27.68 percent, imports at 22.44 percent, compacts at 19.17 percent, subcompacts at 12.33 percent, standards at 10.42 percent and luxuries at 7.96 percent.

Excluding imports, this year's May market featured intermediates at 38.01 percent, compacts at 24.78 percent, subcompacts at 15.60 percent, standards at 12.05 percent and luxury models at 9.56 percent.

Registrations for the first five months of 1985 were up 6.08 percent over the same period a year earlier and were 27.90 percent ahead of January-May, 1983. The combined domestic-import total for 1985 was 4,336,057, compared with 4,087,560 in 1984 and 3,390,119 in 1983.

Year-to-date domestic registrations edged ahead 5.44 percent, to 3,282,293 from 3,113,080 in 1984. Two years ago, they totaled 2,431,488.

The five-month imports total was 1,053,764, up 8.14 percent from 974,480 a year earlier. Their share increased to 24.30 percent from 23.84 percent.

Chrysler increased its share of the year-to-date market 2.15 percentage points, climbing to 11.46 percent from 9.31 percent. Ford was up 1.06 percentage points, to 20.10 percent from 19.04 percent. GM skidded to 42.81 percent from 45.96 percent, and AMC was down to 1.33 percent from 1.85 percent.

Chrysler, Plymouth and Dodge were up through May as were Ford, Lincoln and Mercury. Pontiac was the only GM make to improve its lot, up 0.30 percentage points year to year.

Without imports, the five-month market was shared this way: GM at 56.55 percent, Ford at 26.55 percent, Chrysler at 15.14 percent and AMC at 1.76 percent. The preceding year GM had 60.35 percent, Ford had 25.00 percent, Chrysler had 12.22 percent and AMC had 2.43 percent.

Tester developed to gauge injuries in side impacts

DETROIT.—Development of a device that will simulate the injury effects on passengers in side-impact automobile collisions has been announced by the MVMA.

The unit, Component Test System (CTS), has been produced by MGA Corp., Akron, N.Y., to specifications prepared by MVMA's Engineering Research Committee.

It is a pneumatically powered steel ram that impacts a car door with the force equivalent to a human hitting the door at a speed of up to 25 MPH. The system includes a dual mass element to assess injury potential from internal organ damage and rib fractures.

"While companies will continue to crash entire cars to determine their safety performance in side collisions, the Component Test System will allow engineers to do a great deal more research in this area in less time and at less expense," said Thomas H. Hanna, MVMA president.

Details of CTS were presented at the 10th International Experimental Safety Vehicle Conference in Oxford, England, by MVMA's Ronald J. Wasko, manager of technical liaison for the Safety and International Department.

"The prototype device has been three years in the making," Wasko said. "It not only represents a new research method but in many ways is superior to the actual crashing of two cars." He said CTS can be computer-programmed for a multitude of tests.

"For example, CTS allows a change of occupant positions, adjustment for passenger weight and height and permits a choice of impact areas like the windshield pillar, the mid-car side pillar or the upper door area," Wasko said.

The instrument measures injury forces to the upper part of the human body. The entire CTS unit weighs about 80 pounds. The force of the ram on impact can be between 2,000 and 4,000 pounds depending on the size of the passenger and speed of impact.

Seeks growth in its traditional non-auto fields

EDS wants to expand outside GM

By Marjorie Sorge and Michelle Krebs
Automotive News Staff

AUBURN HILLS, Mich.—Electronic Data Systems will reduce its dependence on General Motors' business by boosting the other sides of its business over the next four years.

Mort Meyerson, president of the GM subsidiary, said the auto maker now makes up two-thirds of EDS' business, but within four years will represent only half of EDS' business.

EDS will accomplish its goal by increasing the business EDS was in before being purchased by GM in October, 1984, he said.

More than 40 percent of EDS's $774 million in sales for fiscal 1984 was in Federal Government contracts, 30 percent in the financial and industrial sectors, 23 percent in the insurance business, 4 percent in health services and 2 percent in international work.

"We hope old EDS will grow so fast that GM becomes less and less an important part," Meyerson said, adding GM's business has tripled EDS's size.

EDS sales grew at a 25-percent annual rate for the eight years prior to the GM buyout, and EDS Chairman H. Ross Perot said it would be "inexcusable" for EDS not to maintain that dramatic growth level.

The two EDS executives spoke at the dedication of a new 75,000-square-foot information processing center in this Detroit suburb. The dedication was held on the 23rd anniversary of the founding of EDS.

The new facility houses 170 EDS and former GM employes who were transferred to EDS to handle the information processing and communicaton needs of GM's Truck and Bus Group. The center's future customers include the GMT-400 Project (the re-design of GM's full-size pickup trucks and related plant modernizations), the Chevrolet Customer Assurance System, Buick-Oldsmobile-Cadillac Group engineering and GM's professional workstation system.

Perot called the center and its staff the "brains and nervous system of GM," which allows the flow of information to the brains of humans at GM. He called it the largest, most modern data center in the world.

He said EDS will build three more such centers in the next year, giving the company a total of 13 centers of the same magnitude. The center computes more information than all of EDS' centers did in 1981, Perot said.

Ground was broken for the facility last November, and it is in full operation today. It can be doubled in size if needed, Perot said.

That will create more jobs in the area. EDS has no job classifications, no management-labor differential and no work rules. Its philosophy is being integrated into GM's Saturn project.

EDS is working closely with GM on that project and many others.

"The EDS/GM team is like the Dallas Cowboys in a good year," Perot said.

EDS's success has come from its people, he added, and GM's will do the same.

"The people at General Motors are a whole lot better than the cars, which means they have enormous potential to improve the cars," he said.

60-cent Ford dividend OK'd for third quarter

DEARBORN.—Ford Motor Co. declared a third-quarter dividend of 60 cents payable Sept. 3 to shareholders of record on Aug. 5.

The 60-cent dividend is the same amount paid in the previous quarter.

Japanese plan to make glass in Ohio for autos

TOKYO.—Asahi Glass Co., Ltd., said it has established two wholly owned subsidiaries in the Columbus (O.) area to manufacture glass for Japanese auto makers in the U.S.

Asahi said the new companies, AP Technoglass Corp. and Belle Tech Corp., will employ about 240 persons and produce enough glass for 200,000 cars annually. Production will be doubled later, the firm said.

The first Japanese glass maker to invest in the U.S., Asahi said investment totaled about $30.3 million and the two firms project sales of $26.3 million annually.

Asahi said the new companies are scheduled to start delivering glass products to Nissan and Honda in the spring of 1986. Asahi now is one of several glass suppliers to Nissan and Honda in Japan.

Asahi also said PPG Industries, Pittsburgh, will invest in AP Technoglass in the future.

VW dealers elect Atamian

BOSTON.—Members of the Volkswagen of America Boston Region Dealer Council have elected Chuck Atamian, Atamian Motors, Worcester, Mass., 1985 chairman.

Breaking ground for L-M deal

Attending groundbreaking ceremonies for Airway Lincoln-Mercury, Bolingbrook, Ill., are, from left: William Neil, Lincoln-Mercury's Chicago district manager; Mayor Bob Bailey; John Keporos, Airway president; Kenneth Coffey, L-M Central region representation development manager, and Airway's George Keporos.

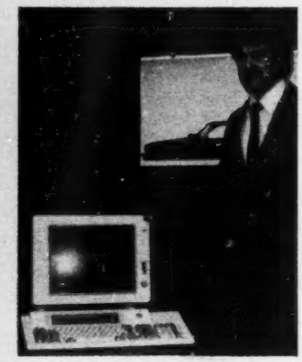
VWoA computer may have all dealers on-line by year-end

TROY, Mich.—Volkswagen of America is launching the DCS-XP (Dealer Computer System-Extended Processor) dealer management system, with the goal of having every dealership on-line by the end of the year, the company said.



Dealer-friendly

Gary Nixon, manager, marketing and administration for Volkswagen of America's Dealer Computer Services, introduces the DCS-XP (Dealer Computer System-Extended Processor) system. All VWoA dealerships are slated to be on-line by the end of 1985.

VWoA plans to have as many as 120 dealerships trained and on-line each month.

The new system "was designed with valuable input from our dealer body," said Frank Berger, director, Sales Systems and Dealer Services.

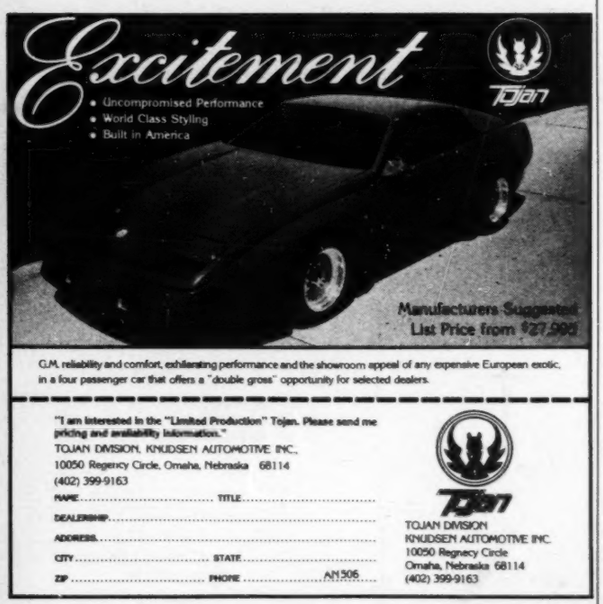
Input from dealers will continue to direct improvements made to the system, Berger said.

DCS-XP, which has been in active use at several pilot dealerships, has met with enthusiastic support, according to the company.

Among features of the new system are: Instant access to complete parts inventories; on-line vehicle sales reporting; complete automated accounting package; automatic follow-up on each vehicle's service needs, and on-line warranty input, the company said.

Berger cited Dealer Computer Services' expanded organization, upgraded data centers, a toll-free support center and a redesigned network for greater capacity and diagnostic capabilities as examples of readiness to service dealers' needs.

So far, the DCS-XP system has been sold to all of the dealers contacted, the company said.



G.M. reliability and comfort, exhilarating performance and the showroom appeal of any expensive European exotic, in a four passenger car that offers a "double gross" opportunity for selected dealers.

Truck deliveries highest of 1985

Canada car sales rise for 4th month in a row

By Jenny L. King
Detroit Reporter

New-car sales in Canada were up for the fourth consecutive month in June and reached the second highest total thus far in the calendar year.

June truck sales notched their greatest year-to-year sales gain, up 38.13 percent, and their best 1985 total: 36,100.

Sales of North American-built cars climbed 8.43 percent June to June, to 84,832 from 78,234. April's 94,959 total was best to date in 1985.

The car sales gain was due to the advances by Chrysler and Ford, since General Motors, American Motors and Volvo all were down.

Chrysler sales climbed 26.19 percent, to 19,436 from 15,402 last year. In addition, Chrysler dealers retailed 926 Mitsubishi-built imports and 101 Peugeots in June. Ford sales were up 25.20 percent, to 22,329 from 17,834.

GM reported a sales decline of 2.02 percent, dropping to 40,100 from 40,925 last year. American Motors was off 30.92 percent, to 2,232 from 3,231 (with 770 imported Renaults this year versus 1,437 in 1984). Volvo was down 12.71 percent, to 735 from 842.

GM's 2-percent sales drop cost it 5 percentage points in market share. GM finished the month with 47.27 percent of the total, down from 52.31 percent a year earlier. Ford was up to 26.32 percent from 22.79 percent. Chrysler earned 22.91 percent, up more than 3 percentage points from 19.69 percent.

AMC finished June with 2.63 percent, down from 4.13 percent, and Volvo slipped to 0.87 percent from 1.08 percent.

First-half new-car sales were up 7.95 percent, to 439,063 from 406,739. For the six months, GM sales reached 215,974, up 1.72 percent from 212,320. Ford was up 24.23 percent, to 106,755 from 85,932. Chrysler reported a total of 99,136, up 14.84 percent from 86,324.

AMC dropped 26.44 percent, to 12,966 from 17,627, and Volvo was off 6.70 percent, to 4,232 from 4,536.

Truck sales, January through June, were up 22.09 percent, to 170,253 from 139,448. Year-to-year sales were up each month in the first half, with increases ranging from 6.81 percent in March to the 38.13-percent jump in June.

For the six months, all the domestic truck makers reported gains, ranging from 12.26 percent at GM to 29.90 percent at Chrysler. Chrysler sales climbed to 36,702 from 28,254. GM was up to 68,508 from 61,025 in the first half of 1984.

Ford truck sales were up 29.85 percent, to 59,749 from 46,014, while AMC Jeep sales rose 27.41 percent, to 5,294 from 4,155.

Total June truck sales were up 38.13 percent, to 36,100 from 26,135 a year ago. Chrysler reported the largest year-to-year gain for the month as well as its fourth consecutive any-month record. Sales reached 8,187, up 67.94 percent from 4,875 a year earlier.

Ford truck sales in June were up 42.89 percent, to 12,013 from 8,407. GM was up 24.01 percent, to 14,980 from 12,080, and AMC Jeep sales were up 19.02 percent, to 920 from 773.

The truck market in June was divided in this manner: GM dropped to 41.49 percent from 46.22 percent a year earlier; Ford was up to 33.28 percent from 32.17 percent; Chrysler climbed to 22.68 percent from 18.65 percent, and AMC dipped to 2.55 percent from 2.96 percent.

25 for Fitzpatrick

96-point checklist helps U.C. dealer guard quality

By Jenny L. King
Detroit Reporter

Bristol Auto Sales, Inc., sells quality in the form of late-model used vehicles, which number up to 85 cars and light trucks at any one time on the Utica (N.Y.) lot.

Bristol owner Raymond Romanus has his team of mechanics give each vehicle a 96-point check. He offers the customer a one-, two- or three-year warranty and provides loaners and free towing service when needed.

Romanus admits his products aren't cheap. "I'm not offering the lowest prices, just the best in used cars, he said.

"I have four mechanics and four lifts. The mechanics go over each vehicle we buy, to tighten it up. I wholesale any that aren't up to our standards.

"We get most of our cars from new-car dealerships, with a few through individuals," said Romanus, a 20-year sales veteran who uses newspaper ads to stimulate sales from his lot adjacent to a brand-new building. He and members of his family handle the retail end of the business.

Competition from sales between private individuals may be stiff, he said, but those buyers get none of the protection from the used-car lemon law that covers customers who buy from licensed dealers.

His mix, he said, ranges from luxury cars to compacts, with a smattering of pickups and vans. There are imports on the lot, but because they tend to be more specialized and more expensive to repair, he prefers domestics, Romanus said.

Rassier takes helm at Ford Aerospace

DETROIT.—Donald B. Rassier has taken over as president of Ford Aerospace & Communications Corp., the $1.5-billion subsidiary of Ford Motor Co.

Prior to joining Ford Aerospace, Rassier was executive vice president of Fairchild Industries, Inc., and chief executive officer of its Aerospace Group.

Hansen takes the helm

Randy V. Hansen signs for Randy Hansen Chevrolet, Twin Falls, Id. He succeeds his father, Ace V. Hansen, who had been a Chevrolet dealer since 1958. Witnessing are the new dealer's wife and D.B. Domres, Chevrolet's Salt Lake City zone manager.

Telecar dealer system eliminates wholesaler/auctioneer

Network automates U.C. stocks

By Patricia A. Kelsey
Staff Correspondent

VENICE, Fla.—A computerized networking service that allows new-car dealers to communicate directly in the buying and selling of used cars, thus avoiding the middleman wholesaler/auctioneer, made its debut in Orlando this month.

The system, known as Telecar, was designed and developed by Telecar Data Systems, Inc., a newly formed Venice-based information management company, with support from Martin Marietta.

The Telecar system operates through the automation of new-car dealers' and rental firms' used-car inventories.

Martin Marietta Data Systems (MMDS) has designed the Telecar system to be compatible with computer hardware currently in dealerships. No additional equipment or extensive training sessions are required, Telecar said.

A user access code and a local phone number provided by Telecar through Martin Marietta are all that are needed for installation, according to Telecar.

The network will be expanded to Miami and other major Florida cities and launched nationally in late 1986, the company said.

By year end, Telecar plans to make access available to rental firms such as Hertz and Avis. Used-car dealers will not be approached at this time, however, because "a lot of used-cars dealers simply are not automated," said Loriann Tyler, marketing associate for Telecar.

The system will locate used cars for inventory and/or customers, market cars, manage and control inventory and improve the overall level of service to car buyers, Telecar said.

The new network concept will allow any Telecar dealer to search the inventories of other Telecar dealers for any number of desired units.

Access provides dealers with Telecar's 8-menu system, which includes such functions as sales analysis, inventory and inquiry reports. The latter cover information such as make, model, color and body features. Those details are matched with cars available at participating dealers.

However, the system does not allow viewing of a dealer's sensitive or proprietary data such as dealer's unit cost or source of purchase. As a primary security measure, each subscribing dealer receives an access code and a systems password.

In addition, two other passwords are made available to dealers for their own use in restricting access to confidential data within the dealership, Telecar said.

"When a dealer finds the used car he is looking for, he can then reach the dealer who has that car directly by phone, using the system's roster function to gain that information," Tyler said.

The cost of becoming a Telecar authorized dealer includes a one-time licensing fee of $2,500, a $275 monthly maintenance charge and usage fees that vary depending on the patterns of individual dealer usage.

Once the full network is in place, consumers will be able to check lists of authorized Telecar dealers in trade and consumer magazines, go to a dealer and find a used car that meets their exact specifications, Tyler said.

When the desired car is located, the dealer will make arrangements to buy it; then he will resell it to the customer, Tyler said.

The new network will also help financing companies sell their repossessions and company cars.

In addition, by centralizing a tracking system, the Telecar network will help law enforcement agencies combat auto theft, the company said.

If Congress passes the anti-odometer-fraud bill, which would require odometer readings to be printed on vehicle registrations and titles, the Telecar system would provide extensive cross-referencing capabilities, said Damon Lansaw, Telecar president.

July 26—Concord Auto Auction, Acton, Mass., and Floyd Hauhe Auto Auction, Bridgeton, Mo.

July 30—Hatfield Auto Auction, Hatfield, Pa.; Arena Auto Auction, Chicago; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; Golden Gate Auto Auction, Fremont, Calif., and Florida Auto Auction of Orlando, Ocoee, Fla.

July 31—Southern Auto Auction, Warehouse Point, Conn.; Columbus Fair Auto Auction, Obetz, O., and South Seattle Auto Auction, Kent, Wash.

American Motors

July 23—Arena Auto Auction, Chicago; High Point Auto Auction, High Point, N.C.; D-A Auto Auction, New Stanton, Pa.

July 24—Columbus Fair Auto Auction, Obetz, O.; Central States Auto Auction, Mason City, Ia.; Metro Milwaukee Auto Auction, Caledonia, Wis.

July 25—Evansville Auto Auction, Evansville, Ind.; Corry Auto Auction, Corry, Pa.; Minneapolis Northstar Auto Auction, Shakopee, Minn.; Todd Auto Auction, Telford, Pa.; Northway Exchange, Clifton Park, N.Y.

July 26—Floyd Hauhe Auto Auction, Bridgeton, Mo.

July 30—Aptco Auto Auction, Taylor, Mich.

July 31—Kansas City Auto Auction, Kansas City; Mid-States Auto Auction, South Bend.

Aug. 1—Fredericksburg Auto Auction, Fredericksburg, Md., and Atlanta Auto Auction, Red Oak, Ga.

Ford Motor Co.

July 24—Lakeland Auto Auction, Lakeland, Fla., and Brahser's Southern California Auto Auction, Fontana, Calif.

July 25—Aptco Auto Auction, Taylor, Mich.; 166 Auto Auction, Springfield, Mo., and Skyline Auto Exchange, Fairfield, N.J.

July 31—Northway Exchange, Clifton Park, N.Y., and Clanton's Auto Auction, Darlington, S.C.

Aug. 1—Floyd Hauhe Auto Auction, Bridgeton, Mo.; Big H Auto Auction, Houston, and Denver Auto Auction, Englewood, Colo.

General Motors

July 23—Southern Auto Auction, East Windsor, Conn.; South Seattle Auto Auction, Kent, Wash., and Clanton's Auto Auction, Darlington, S.C.

July 24—Omaha Auto Auction, Omaha, and Indianapolis Auto Auction, Indianapolis.

July 31—Brasher's Salt Lake Auto Auction, Salt Lake City, and Metro Auto Auction, Kansas City.

Aug. 1—Butler Auto Auction, Gibsonia, Pa., and Arena Auto Auction, Chicago.

Aug. 6—Dallas Auto Auction, Dallas.

Aug. 7—Golden Gate Auto Auction, Fremont, Calif., and Hatfield Auto Auction, Hatfield, Pa.

Aug. 8—Aptco Auto Auction, Detroit, and Floyd Hauhe Auto Auction, Bridgeton, Mo.

Aug. 13—Denver Auto Auction, Englewood, Colo., and Florida Auto Auction of Orlando, Orlando.

Aug. 14—Northstar Auto Auction, Shakopee, Minn., and Brasher's Auto Auction, Fontana, Calif.

Aug. 15—Nashville Auto Auction, Nashville.

Aug. 20—Southern Auto Auction, E. Windsor, Conn., and South Seattle Auto Auction, Kent, Wash.

Aug. 21—Clanton's Auto Auction, Darlington, S.C., and Indianapolis Auto Auction, Indianapolis.

Western Star introduces '86 conventionals at ITS

Continued from Page 18

added around the engine compartment for a quieter ride.

The company offers a deluxe 66-inch sleeper box, tall enough for a 6-foot-3 driver to stand up in. The standard 42-inch mattress sleeps two comfortably. All sleeper box sizes (36-inch, 42-inch, 60-inch and 66-inch) can be spec'd with engine start panels.

The new models improve fuel economy by reducing weight. They use aluminum castings and parts without compromising strength, the company said.

Engine compartment sizes were increased to accommodate diesels, including the new Caterpillar air-to-air engine.

The 1986 models have new lightweight, one-piece fiberglass hoods with torsion bar assists for easy, full 90-degree opening. Traditional tilt-out dash panels and a centralized electrical junction block in the cab kick panel provide easy accesss to wiring, plumbing and relays.

The new models retain the previous all-steel welded cab construction, custom-drilled frame rails, extra-strong tubular steel crossmembers and Ross 16,000-pound-capacity power steering gears as standard components.

Dashboards are made of steel. New heavy-duty tow hooks are connected to frame rails for extra strength and stability.

Western Star now offers a full-year, unlimited mileage warranty. The warranty covers severe service applications, such as logging, construction and mining.

It covers the air conditioner and heater; air intake and exhaust; air system; cab instruments, trim and accessories; cab structure including sheet metal; paint, and radiator and cooling system.

It also covers the battery box and tool box; fuel system including tanks, lines, filters and valves; electrical system and wiring; alternator and starter; springs, and steering system.

The company's extended 5-year, 500,000 mile pro-rated warranty covers rear axle housings, chassis mounting, brackets, crossmembers and frame rails, front axle I-beams and steering knuckles.

Since establishing independent U.S. operators March 2, 1983, the company has built a solid nationwide dealer network, more than doubled its parts distribution service and captured a fair share of the Class 8 heavy truck market, said President James V. Koziak.

Western Star was formerly affiliated with White Motor Co. (now Volvo/White). It has operated in Canada for 18 years and is owned by NOVA and Bow Valley Resource Services, Ltd., both of Calgary, Alta.

Working toward its goal of a 100-member U.S. dealer network, Western Star Trucks signed up 13 new dealers in the first half of 1985.

It expects to announce its 100th dealer later this year.

In an effort to speed parts service to dealers, it established a new parts distribution facility in Memphis and doubled the size of its parts warehouse in Clearfield, Utah.

Both facilities are equipped with high-bay racks and rail-controlled order pickers.

The Memphis facility will allow it to quick-ship parts to dealers anywhere in the U.S.

dealing with dealers

Chevy adds four dealers in Cincinnati zone

CINCINNATI.—Four new dealers have recently signed on in Chevrolet's Cincinnati zone.

They are: Edward N. Forman, Ed Foreman Chevrolet-Oldsmobile, Inc., Ottawa; Timothy L. White, White-Allen Chevrolet Co., Dayton; James J. Gusweiler, Jim Gusweiler Chevrolet, Inc., Washington Court House, and George F. Bush, Bush Chevrolet-Buick, Inc., Wilmington.

Cronic buys Pontiac deal

GRIFFIN, Ga.—June Cronic has purchased Hardin Pontiac, Inc., here and now will operate as Cronic Chevrolet-Pontiac, Inc.

Pollak Cadillac opens

ELMHURST, Ill.—Pollack Cadillac has opened here. Owners are Len Pollak and Dale Pollak.

Signing with Isuzu

DANBURY, Conn.—Charles Monaco has signed with Isuzu for Fair Isuzu.

Chevy's Omaha zone gains four dealers

OMAHA.—Four new dealers have recently signed on in Chevrolet's Omaha zone. All of the dealerships are located in Iowa.

They are: James E. Jobe, Jim Jobe Chevrolet-Buick-Pontiac, Inc., Mount Ayr; Carlos M. Beardmore, Mark Beardmore Chevrolet, Inc., Carroll; Keith E. Diekevers, D&H Motors, Inc., Sheldon, and Carl C. Wilson, Dal-Co Auto Center, Ltd., Perry.

Oldsmobile signs three dealers in Illinois

CHICAGO.—Oldsmobile recently signed three new dealers in Illinois.

They are: William V. Wiebking, Liberty Oldsmobile-Cadillac, Inc., Jacksonville; John J. Wright, J.J. Wright Oldsmobile, Inc., Lansing, and Zollie S. Frank, Z. Frank Oldsmobile, Inc., Des Plaines.

Signing with Subaru

CERRITOS, Calif.—Kent Browning has signed for Cerritos Subaru.

New with Chevrolet

ATLANTA.—Two new dealers have recently signed on in Chevrolet's Atlanta zone. They are David D. Kirk, Sexton Chevrolet-Oldsmobile, Inc., Crossville, Tenn., and Edward E. Kirby, Edd Kirby Chevrolet, Dalton, Ga.

Isuzu signing

VALLEY STREAM, N.Y.—Rick DeMarco has signed with Isuzu for Valley Stream Isuzu.

New Olds dealer

FORT PIERCE, Fla.—Tom Perona has signed with Oldsmobile for Ken Perona Oldsmobile, Inc.

New Pontiac point

COLBY, Kans.—Patrick McLaughlin, McLaughlin Motors, Inc., has signed with Pontiac.

Second-generation dealer

QUINCY, Fla.—Bruce H. Thomas has signed with Pontiac for Thomas Motor Cars. The new dealer's father, Howard E. Thomas, was the former dealer.

Chevy's Detroit zone gets three new dealers

DETROIT.—Three new dealers have recently joined Chevrolet's Detroit zone.

They are: P.J. Kool, Kool Chevrolet, Sturgis, Mich.; Walter Norris, Holiday Chevrolet, Farmington, Mich., and J.W. Lazar, Walt Lazar Chevrolet, Inc., Taylor, Mich.

New Pontiac dealers

ST. LOUIS.—Two new dealers recently have joined Pontiac's St. Louis zone. They are Roger Sparks, Sparks Buick-Pontiac-GMC, Potosi, Mo., and Richard Blumenstock, Blumenstock Motor Sales, Inc., Cairo, Ill.

New with Chevrolet

SALT LAKE CITY.—Two new dealers have recently joined Chevrolet's Salt Lake City zone. They are Lama O. Means, Pioneer Chevrolet-Oldsmobile-Pontiac, Inc., Polson, Mont., and Robert L. Faw, Bob Faw Chevrolet-Oldsmobile, Inc., Big Timber, Mont.

Jimmy Bryan Toyota sold

CLEARWATER, Fla.—Toyota of Clearwater has purchased the former Jimmy Bryan Toyota dealership here and plans to build a new facility in 1986.

Wiese purchases Dodge and Nissan deals

SOUTH BEND.—The Gurley-Leep Dodge and Nissan dealerships have been sold to Norman E. Wiese, of Indianapolis. Gurley-Leep will continue to operate its Buick and Mercedes-Benz dealerships in Mishawaka, where it moved from downtown South Bend late last year.

Wiese plans to move the Dodge dealership to a new site; the Nissan store will remain at the present site. Wiese operates dealerships in Indiana, Florida and Illinois.

Olds deal for Spyies

PORT RICHEY, Fla.—Harry Spyies has signed with Oldsmobile for Golden Oldsmobile, Inc.

New spot for Toyota deal

MODESTO, Calif.—Lynn Stinson and Bill Heath, of Modesto Toyota, have broken ground for a new dealership which will feature 20 service stalls and a 15-car showroom on a four-acre site.

Shockley Honda moves

FREDERICK, Md.—Shockley Honda has moved to a new location here. This is the dealership's ninth year of operation.

Car Store breaks ground for new dealership

LEBANON, N.H.—The Car Store has broken ground for a new dealership here.

Plans are to move its Dodge and Mazda franchises to the new 12,000-square-foot building. The Subaru franchise will expand at the current dealership in Norwich, Vt. Charles Ffolliott is president.

Baxter named president

MADISON, Wis.—Patrick J. Baxter has been named president and general manager of Kayser Ford, Inc. He has also acquired an ownership interest in the business.

Tasha Corp. acquires C-P-VW dealership

FREMONT, Calif.—Tasha Corp. has acquired assets of the Chrysler-Plymouth-Volkswagen dealership formerly owned by Leon Mezzetti. The new dealership is called Auto West Chrysler-Plymouth-Volkswagen.

Tasha Corp. owns and operates Hayward Dodge, Dodge Country, Riverside Dodge, BMW Auto West, Honda City, Mobility Industries, Cherry Creek Dodge and Colorado Chrysler-Plymouth.

Brewster Motors sold to Johnson and Bleyer

HERRIN, Ill.—Bobby Johnson and Frank Bleyer have taken over Brewster Motors, Inc. The business was formerly owned by Clyde Brewster and is now known as Williamson County Ford-Lincoln-Mercury, Inc.

Johnson serves as vice president and general manager and Bleyer is president.

Miss Texas snips the ribbon

Laura Herring, Miss Texas USA, cuts the ribbon at the Dallas Auto Show. Also participating in the ceremony are, front row, from left: Sam Pack, board chairman of the New Car Dealers Assn. of Metropolitan Dallas and president of Lee Jarmon Ford; Lyle Ozmun, chairman of the 1986 auto show committee and president of Ozmun-Herring Volkswagen-Subaru, and Lee Maas, chairman of the auto show committee and president of Classic BMW-Ferrari, Inc. In back, from left, are: Kim Rose, president of the dealer group; Galen Poss, show manager, and Ralph Gaden, 1984 auto show committee chairman and president of Metroplex Mitsubishi.

Fisher deal moves

ST. LOUIS.—Terry Fisher Buick-Pontiac-GMC-Mazda in nearby St. Charles, Mo., is moving west to St. Peters, Mo., where ground has been broken on a 15-acre site.

Louisiana Chevy dealers

NEW ORLEANS.—Two new Louisiana dealers have recently signed on in Chevrolet's New Orleans zone. They are Geroge D. Clark, Clark Chevrolet-Olds, Inc., Bastrop, and Rodney D. Hendrick, Hendrick Chevrolet, New Roads.

Three Saab deals open

ORANGE, Conn.—Saab-Scania of America, Inc., has announced the opening of three new Saab dealerships. They are: Treadwell Saab, Mobile, Ala.; Pacific Valley Motor Co., Inc., Stockton, Calif., and L.T. Boswell, Inc., San Benito, Tex.

Carson Subaru completed

CARSON CITY, Nev.—Construction has been completed for Carson Subaru here. General manager is Mike Fowler.

Honda point opens

CHARLOTTE, N.C.—LaPointe Honda has opened in a 30,000-square-foot facility here. Dealer is Frank J. LaPointe.

Steffen, Johns sign

MENOMONEE FALLS, Wis.—Walter N. Steffen and Daniel W. Johns have signed for Martz Chevrolet, Inc., here.

Adding Pontiac

FARMINGTON, N.M.—James M. Copeland and Charlie Craven have added Pontiac to their dealership which is now known as Copeland/Craven Pontiac-Oldsmobile-Nissan.

Dealership relocates

SHAWNEE, Okla.—Shawnee Lincoln-Mercury-AMC-Jeep-Renault has moved. Marion Davidson, president, also owns Enid Lincoln-Mercury, Enid, Okla., and has an interest in Zoller-Davidson Ford-Lincoln-Mercury, Weatherford, Okla.

New in North Carolina

SMITHFIELD, N.C.—Deacon Jones Buick-Pontiac, Inc., has opened here.

Where auto market was, First Half, 1985

Truck registrations set record through May

Continued from Page 18

over the lead from International Harvester which had held it since February, 1983. Ford registrations through May, 1985, tallied 19,272, compared with 18,922 for International.

Ford, in fact, gained 1.89 percentage points in heavy-duty market share this year while International lost 1.72 percentage points.

The light, Class 1-3 segment tallied 1,743,085 units through May, up 15.7 percent from last year's 1,506,474.

Class 1 registrations numbered 1,202,149, up 40.9 percent from the year-earlier 852,997. Registrations in the lightest class accounted for 64.7 percent of the industry total. Of Class 1 registrations, 334,962 units, representing 27.9 percent, were imports. The imported Class 1 trucks accounted for 18.0 percent of the entire truck industry.

Class 2 registrations were off 17.4 percent, down to 526,229 from 637,116 through May a year-earlier.

Class 3 registrations through May numbered 14,707, down 10.1 percent from 16,361 last year.

Class 4 registrations were up 57.8 percent with 385 through May, up from 244 a year earlier.

The medium-duty Class 4-6 segment scored a 34.5 percent increase in registrations through May, 1985, with a total of 24,906, up from 18,521 in the 1984 five-month period.

Class 5 registrations were up 218.6 percent with a total of 2,740, compared with 860 in 1984.

Class 6 registration were up 25.6 percent. They numbered 21,781 tallies, compared with 17,417 last year.

The heavy-duty Class 7-8 segment notched a 24.7 percent increase through May with 90,320 registrations, up from 72,410 in the year-earlier five-month period.

Class 7 registrations were up 36.6 percent and numbered 32,442 through May, 1985, up from 24,472 last year.

Class 8 registrations totaled 57,878, up 20.7 percent over the year-earlier 47,938.

Nissan recalls 66,400 Maxima and 'Z' models

WASHINGTON.—In the matter of emission controls, it is now quite common for auto manufacturers to specify a change of the oxygen sensor at 30,000-mile intervals. Nissan Motor Corp. in U.S.A., however, requires only that the sensor in its Z and Maxima models be checked and replaced if necessary.

Apparently that is not good enough for the EPA, which has asked the company to recall 66,400 of its non-California 1981 280-ZX and Maxima models with gasoline engines, recheck the oxygen sensors and replace them if necessary. Nissan is recalling the cars.

According to a spokesman for the agency's enforcement division, the criteria Nissan uses to assess the condition of the oxygen sensor is not stringent enough, leading to the use of sensors that cannot keep the cars from failing EPA standards for hydrocarbon and carbon monoxide emissions.

Under the terms of the recall agreement, Nissan will tighten its standards in rechecking those 1981 models that have already gone beyond its normal 30,000-mile sensor check as well as those that have not reached that level. Only owners of vehicles having more than 30,000 miles will be asked to bring them back to dealers.

Will project fall short of expectations?

Publicity barrage may hurt Saturn

Continued from Page 1

touch in the car.

Some of the confusion has come from GM. It doesn't appear that GM is absolutely sure what kind of car Saturn will be. Some say GM announced the project prematurely to assure the American public that it was not abandoning small car development in the U.S.

With all the talk of futuristic manufacturing techniques, GM has left the public with the impression that the Saturn car will be a high-tech automobile.

All that is known about the Saturn car at this point is that it will be modularly constructed. It will have electronic power steering, remote electronics and the radio will be on the steering pod. It will be front-wheel drive and will get 45 MPG in city driving and 60 MPG on the highway.

GM insiders say it will be the first time this amount of electronics, which will be commonplace in the upper-end of the market, will be available on lower-priced cars.

The Saturn car has been billed as a low-priced, fuel-efficient import fighter. If the Saturn automobile rolled out on the streets today, it would be priced just above GM's lowest-priced model, the Suzuki-built Sprint priced at $5,151. The Saturn price is expected to be about $6,500.

Nevertheless, observers note, high-tech items are expensive and calling the Saturn car high-tech and low-priced is inconsistent unless GM expects to lose money on Saturn.

"It could be another ho-hum car that's not making money," said one analyst, who said GM would have a better shot if Saturn were a competitor in the BMW 3 Series class of cars.

But GM Chairman Roger B. Smith made clear at the press conference announcing Saturn Corp. that the car would be competitively priced but still would show a profit.

The entire profit-making scenario and high-tech additions to the car hinge on the Saturn project's ability to cut out the $2,400-per-car cost advantage the Japanese currently enjoy. That would be done through what have been termed revolutionary manufacturing processes.

However, observers say the Saturn manufacturing process will not be all that revolutionary by the time the car goes into production. Instead it will be a step in the the evolutionary process taking place on the factory floor.

Saturn is only one more step in updating GM's manufacturing operations. It is the 12th or 13th step in a long series of planned modernizations scheduled over the next few years. GM, as it has done with all of its new plants, will take the best of all its plants up to that point and combine them in Saturn.

Officials of other auto companies say they see nothing new in Saturn. They say they have already done the things they have heard about Saturn.

The only two revolutionary items seem to be the Saturn/UAW labor agreement and the separate dealer franchise required to sell the car.

The announcement that dealers would have to apply for a separate franchise to sell Saturn cars initially infuriated Chevrolet dealers, who had expected the Saturn model in their lineup and who want a low-priced, small car to replace the Chevette.

While still unsettled, the preliminary information about the labor agreement shows it to be revolutionary, paving the way for cutting labor costs and creating equality among all Saturn workers.

About 6,000 jobs will be associated directly with Saturn, with another 15,000 or so indirectly linked.

The community chosen for the Saturn plant may be expecting jobs to be created for its residents. However, the proposed agreement stipulates that the majority of those initial 6,000 jobs will come from current GM operations.

The states not chosen for the project may see other businesses seeking the same kind of deal that was offered to Saturn. The states have set a precedent by offering GM the sun and the moon to build the complex in their state.

Nevertheless, some states have said that the effort to win the Saturn plant has been beneficial in attracting other businesses. It has resulted in the states taking stock of their high and low points in luring industry and has united the forces of business, state government and the public in a common cause.

For Ford Motor Co. and Chrysler Corp., all the focus on GM's Saturn car may not be all bad.

Both companies have offically said they have futuristic manufacturing projects similar to Saturn —the Ford Alpha and the Chrysler Liberty.

It may be that those cars will do better in the marketplace than Saturn since they have received less hype and have fewer expectations to meet.

However, the public, which can fool you, may associate those cars with Saturn and turn away from all three and into the waiting arms of the imports.

Fiat Uno to be powered by Fire 1000

The Fiat Uno will receive a new engine—the Fire 1000. Actual capacity of the new engine is 999 cc. It delivers 45 HP, the same power delivered by the old 903-cc engine.

NHTSA to reduce CAFE to 26 MPG for '86 cars

Continued from Page 1

no more than a 0.2 percent increase in gasoline use over the period, he said that GM "would have been forced to lay workers off without this reduction."

He added that because it makes no sense to lay people off, "GM will seek reductions in future year CAFEs as well."

Helen O. Petrauskus, Ford vice president for environmental and safety engineering, hailed the decision as a "victory for common sense and consumers who need and want to buy family sedans and station wagons."

She said Ford was committed to producing fuel-efficient vehicles. She noted that its largest car this year delivered better fuel economy than its smallest car did in 1975. In explaining the company's fuel-economy situation for 1985 and 1986, she said that Ford could not control the demands of the marketplace.

"We're pleased the agency will consider easing the standard for future years and hope that it will give prompt consideration to any requests it might receive, given the lead time requirements of our industry," she said.

At Chrysler, Chairman Lee Iacocca was less than overjoyed.

Chrysler has argued long and hard against easing the standard, saying it would be unfair to Chrysler in view of the billions it has spent to boost fuel economy and unfair to the country because it amounts to a virtual abandonment of the nation's energy program.

"The whole country was held hostage by OPEC in the 1970s. Now, were setting ourselves up to be hostage again in the 1990s," Iacocca said in decrying the rollback as nothing more than a handout to the rich.

"If you're going to have the privilege of driving big cars, you should pay for it," he said.

Meanwhile, the Department of Commerce estimated that 110,000 American jobs would be lost if the standard is not changed.

Bill seeks 25-pct. tariff on all Japanese imports

Continued from Page 3

gency and temporarily grant the President extraordinary powers to reduce the merchandise trade and current account deficits.

The President would also be charged with initiating action under the General Agreement on Tariffs and Trade (GATT) or "other appropriate international bodies" to obtain redress against the "unfair policies" of major trading partners to the U.S.

If those actions fail to reduce the U.S. trade deficit, the bill would mandate a "standby" duty of 25 percent on major trading countries that maintain "inequitable surplus in their trade with the U.S. or with the world as a whole."

The duty would not be assessed until October, 1986, and would be levied only against nations which maintain "unfair" trade barriers.

Nations which qualify for the duty may escape it one year later if they reduce the size of their trade surplus or eliminate their unfair barriers. Nations that maintain unfair trade barriers or excessive trade surpluses after one year of the 25-percent tariff would have to reduce their trade surplus by an additional 10 percent in each subsequent year of excessive trade surplus.The emergency measure would be in effect for five years after passage.

The bill requires that duties collected under the emergency measure be used to reduce the federal budget deficit, which lawmakers believe is a primary cause of U.S. non-competitiveness internationally and at home against foreign goods.

The Treasury Secretary would also be required to draw up a plan to bring the value of the dollar more in line with foreign currencies. The Trade Representative's office would also be strengthened under the proposal, making that office the "final decision-making authority" under various U.S. trade laws.

Inventory of import cars climbs to 28-month peak

Continued from Page 1

both from a month earlier (296,915) and from a year earlier (216,815). The July 1 days-supply figure of 31 also is up from a month ago (29 days) and a year ago (25 days), but is below the May 1, 1985, figure of 34 days.

Not surprisingly, it is the Japanese makes, with their relaxed quotas, that are adding the most to import inventories lately. The inventory of Japanese cars increased nearly 11,000 units during June, to reach its highest level since July 1, 1983.

The stockpile of German makes increased by nearly 4,000—and at about half the percentage-rate increase of the Japanese. The stockpile of other European makes decreased during June.

The July 1 stockpile was shared this way: Japan, 54.96 percent; Germany, 33.11 percent, and other countries, 11.93 percent.

One month earlier, the split was Japan, 53.80 percent; Germany, 33.33 percent, and other countries, 12.87 percent.

The big decreases in the days-supply figures for Dodge and Plymouth Colt can be attributed to giant leaps in their daily selling rates. Sales of the other Chrysler Corp. captive imports stayed on an even keel, but because their volumes are so low, even a miniscule sales-rate decline increases their days-supply levels.

The Merkur's bloated inventory can be attributed to increased shipments: Sales were actually up a hair from May levels. Merkur is a new German model sold by Lincoln-Mercury dealers.

The stockpile of import trucks—including domestic Nissans—rose to a five-month high. The unit count on July 1 was 94,705, good for 36 selling days. One month earlier the count was 92,815, a 31-day supply. On July 1, 1984, there were 79,783 trucks in inventory, a 34-day supply.

The only big change in days-supply figures for the import trucks came at Mitsubishi. A dealer incentive program that began June 1 and runs through this month increased its truck sales by 56 percent. Even though its inventory count was just about the same as on June 1, the increased sales severely trimmed the company's days-supply figure.

The July 1 import vehicle count —cars and trucks combined—rose to 404,926, the highest total since March 1, 1983. One month ago, there were 389,730 imports in iventory; one year ago, 296,598.

There was a 32-day supply of import vehicles on July 1, compared with a 29-day supply one month earlier and a 39-day supply a year earlier.

The import car lines by country of origin and their July 1 days supply levels:

Japan—Isuzu, 71; Mitsubishi, 30; Nissan, 27; Subaru, 20; Mazda, 19; Toyota, 13, and Honda (imports only), 7. In addition, there was an 83-day supply of Chevrolet captive imports: 89 for Isuzu-built Spectrum and 69 for Suzuki-built Sprint.

The Chrysler captives built by Mitsubishi averaged a 49-day supply: Dodge Conquest, 106; Plymouth Conquest, 91; Plymouth Colt, 51; Dodge Colt, 49; Dodge Vista, 40, and Plymouth Vista, 40.

Germany—Merkur, 172; BMW, an estimated 85; Audi, 70; Volkswagen, 69; Porsche, 63, and Mercedes-Benz, 46.

Other European makes—Renault, 276; Peugeot, 82; Volvo, 51; Saab, 37; Alfa Romeo, 28, and Jaguar, 25.

Light-trucks and their days' supplies: Isuzu, 75; Chrysler Ram 50, 46; Nissan (including domestics and imports), 39; Toyota, 33; Mitsubishi, 25, and Mazda, 13.

IMPORT STOCKS

	July 1, 1985	June 1, 1985	July 1, 1984

Underwriters screen dealer clients more scrupulously

A closer look at self-insurance

Continued from Page 2

fallout are becoming extremely selective.

"Trying to find the right dealer to do business with is our objective," said Tom Nerney, vice president of Wheelways Insurance and Financial Services, Wynnewood, Pa., which insures about 650 auto dealers nationally for property/casualty.

"We won't quote an account without three years documented loss experience. We're looking for a dealer who is going to work with us to control losses."

Risk managers say the first step in today's market is a comprehensive look at loss control. And some say self-funding is the ultimate incentive for reducing controllable exposures.

"If you start underwriting yourself and your fellow dealers, loss prevention takes on a whole different perspective," said Kinder.

Andrew Cmiel, director of the Dallas-based Risk Management Service Co., a third-party administrator for self-funded programs, said self-insurance boils down to higher risk retention—up to a negotiated level—by individual companies or pools of companies.

Insurance companies pick up the first layer over and above the self-insured risk. The carrier in turn sells part of the risk to another insurance company on a reinsurance contract, and an excess insurer normally provides the final layer of coverage.

Several state dealer associations say they are considering self-funded programs for members as a response to conditions in the property and casualty field.

"Liability is a very, very important problem that is growing all the time," said Barry McGuire, executive vice president of the Michigan Automobile Dealers Assn. "We're looking into some type of self-insurance. But it has to be a program that we can get into with an umbrella—Lloyd's of London or some type of carrier for excess insurance."

McGuire said members are fearful of some potential drawbacks, including selectivity and the possibility of a big loss early in the program.

"You have to be sort of lucky the first couple of years," he said. "Then you can handle pretty much anything that comes along. But you can't have a disaster in the first couple of years.

"Another problem is that there are some pressures put on by the state insurance bureau and others to accept everybody," he added. "You can't pick and choose. We would be in a position of having to include some people we wouldn't want to."

"I don't see us going into self-insurance," said Tim Doran, executive vice president of the Ohio Automobile Dealers Assn. "The up-front money is pretty significant."

David Bresnahan, senior vice president, marketing at Universal Underwriters Group, Kansas City, the nation's leading insurer of auto dealers, dismissed self-insurance as "a popular buzzword."

"I doubt if there is an awful lot of interest in it," he said. "It is not a game you can play with just a few dollars. It takes an association with 400 or 500 members. One hundred is pretty low, too small a base."

"I've heard some talk about self-insurance, but I'm not aware of any case along the property and casualty lines," said Grover Lewis, operations manager for the National Automotive Insurance and Service Agency, a wholly owned subsidiary of NADA. "The potential risk is so high even for your big guys. The loss of several million is more than they want to sleep with at night."

Lending institutions present another obstacle, according to Lewis.

"Banks aren't going to stand for it," he said. "If I have a $3 million building with a $2 million mortgage, the bank is going to insist that I have it covered for hazards. If the bank is floorplanning a $1 million or $1½ million inventory, they ain't going to let me self insure it."

"There is a lot of talk in the industry about self-insurance, but I haven't heard much about it in individual dealerships," said Nerney. "The difficulty in the auto industry is due to the many variations of exposures dealers have. There are so many different areas, you have to cover that it is real tough."

Nerney said Wheelways offers a form of self-insurance on physical damage through restructuring of deductibles.

"We've started that on physical damage," he said. "There is more and more acceptance of it. It helps loss control and it helps premiums. One way a dealer can get involved in controlling losses is to get himself financially involved, but it is very difficult on the liability end. You generally need substantial capital to do that."

As for banker nervousness, Heckman said that "most successful" programs work with an insurance company that guarantees funds will be there to meet obligations. Several other mechanisms exist for satisfying banks, he said, including posting of bonds and letters of credit.

"Self-insurance, where you just say 'I'll take the first $10,000 or $25,000 of each loss,' is where a lot of programs have failed and leave a bad taste," he said, noting that such basic self-funding approaches generally do not involve a fundamental loss-control review.

Heckman said selectivity in a comprehensive group self-insurance program can be achieved by establishing and upholding loss-control bylaws.

"It's legal, it has been tested in court," he said. "What you can't do is discriminate in the application of rules."

Proponents of self-insurance argue that individuals or groups need not take on any more risk than they can handle. Self-funding, they say, is merely a way to restructure risk financing.

"The important point is that dealers do have alternatives," said Heckman. "There are lots of ways to deal with the problem other than paying whatever premium the insurance company asks."

Heckman said dealers considering self-insurance should seek professional assistance in the design and implementation of programs, receive a full explanation, understand all financial and insurance risks associated with the plan and "actively support and practice enlightened loss prevention."

He warned dealers not to try to assume all of its exposure or sacrifice needed protection for dollar savings.

"The probability that a loss might occur is less important than the possible severity of it, in dollar cost, if it should occur," he said.

Individual dealers and associations considering self-insurance must decide whether to handle claims internally or hire a third-party administrator (TPA).

"On a smaller level, third-party administration gets a little awkward," said Cmiel, who noted that commercial carriers frequently service relatively small, self-insured accounts, such as moderate-sized dealers, with the understanding that losses come out of the dealer's pocket.

There are other risks and responsibilities which companies should come to grips with before insuring their own shops. TPAs, if used, must be carefully chosen; time must be taken to monitor the TPA's claims work, and the self-insurer has to comply with applicable state regulations and be aware of federal and state tax laws.

The U.S. Deficit Reduction Act of 1984 disallows current-year tax deductions on reserves set up to pay future claims, thereby reducing the financial benefits of self-insuring.

Cmiel said the Federal Government and most states won't allow writeoffs until a specific loss is covered since self-insurers, unlike admitted insurance carriers, are not mandated by law to establish reserves.

Because of high dealer risk exposure, most experts cite the advantages of pooling with other auto retailers in self-insurance programs. Associations can not only lower premiums through volume, but dealers may share the cost of loss control measures, such as roving security guards.

Kinder said association plans are governed by committees made up of both insurance specialists and auto dealers. As a result, he said, programs can be fitted specifically for the insurance needs of an auto dealership.

"It's the best of both worlds," he said. "You have people who know their business coupled with insurance professionals."

Yet Kinder cited a natural reluctance among auto dealers to go into self-insurance arrangements with cross-town competitors.

"Certain industries will come together and others won't," he said. "One of the most difficult to bring together is dealers. They don't want to let their rivals know what they are doing. It is purely egotistical.

"Jack's Used Car Shop can affect the premiums of the (better-managed) dealer," he said. "So the question is, how do you get these people together? The answer is they come together when conditions force them to, when they have common problems. They will talk when their personal assets are on the line every time someone walks into the dealership.

Americans in Paris

Nancy and Bill Davidson, Beverly, Mass., stand with their new Peugeot 505 while in Paris for the French Open Tennis Championships. The couple won the trip and Peugeot in a drawing at the Boston Garden's Peugeot Tennis Invitational. The Boston-area Peugeot dealers joined forces to offer the prizes.

DOE analysis finds buyers moving to smaller U.S. cars

Continued from Page 2

hand, increased their fleet average nearly one MPG (0.88 MPG) because of an increase in sales of less fuel-efficient cars, a decline in fuel economy of some existing models, and an increase in sales of larger cars.

Said the DOE report, "The market continues to gravitate toward the compact class, with domestic makers decreasing the size and weight of their vehicles and import makers increasing the size and weight of their products."

The DOE report utilizes EPA fuel-economy numbers, curb weights, engine sizes, transmission types and interior volume figures, in combination with published sales figures to develop its trend lines.

It says the sales-weighted average of curb weights of automobiles continued to drop in 1985, with the fleet losing an average of 30 pounds from the previous year. The most significant drop of 150 pounds was observed in large cars.

Smaller cars, meanwhile, gained weight. So did imports, which added an average of 50 pounds since the 1984 model year.

Interior space for domestic and import cars continued to decline, although by a miniscule 0.4 cubic inches.

Engine size also dropped slightly for the new-car fleet in spite of the fact that all domestic and import car size classes except domestic large cars and imported minicompacts increased their engine sizes, the report said.

In the light-truck market, DOE attributed the improvement in fuel economy largely to the sales shift toward more fuel-efficient vehicles and to improved technology.

Mirroring the trends in passenger cars, domestic light trucks averaged a 0.55-MPG improvement for the first six months of the 1985 model year while import models showed a worsening of 1.74 MPG in their sales-weighted fuel economy.

Since 1978 when the DOE first began compiling sales-weighted fuel-economy averages, the new-car fleet has improved its fuel economy from 19.7 MPG to 26.9 in 1985. The light-truck fleet has improved its fuel economy from 17.3 MPG in 1978 to 20.5 MPG.

Broken out, the domestic new-car fleet has improved its fuel economy from 18.6 MPG in 1978 to 26.0 MPG in 1985. The import new-car fleet has gone from 27.9 MPG to 30.4 MPG.

In light trucks, the American makers have gone from 16.6 MPG in 1978 to 19.5 MPG in 1985. The imports, meanwhile, find themselves at a 26.5-MPG level, just 0.1 MPG better than they were in 1978, after having fallen to as low as 23.1 in 1979 and reaching as high as 28.2 in 1982 and 1984.

South Dakota dealers elect Rypkema president

The South Dakota Automobile Dealers Assn. has elected new officers. From left are: Dan Cotton, Dan Cotton Chevrolet, Beresford, past president; Milo Rypkema, Dodge Town, Rapid City, president; Roger Davidson, Davidson Chevrolet, Inc., Mobridge, vice president; Tom Graham, Soo Imports, Inc., Sioux Falls, treasurer; Merlin Fauth, Courtesy Lincoln-Mercury, Rapid City, secretary, and Jerry Wheeler, Sioux Falls, executive vice president.

All auto makers are producing again

Week's output jumps to 166,310

By Louise Kertesz
Detroit Reporter

With all domestic manufacturers contributing to the weekly build for the first time since mid-June, auto production climbed to 166,310 units last week, 25.48 percent more than the previous week's 132,539.

Plants of Ford Motor Co. and Nissan Motor Mfg. Co., U.S.A., resumed production last week after two weeks' vacation, and Volkswagen of America's Westmoreland (Pa.) facility reopened after being idled for two weeks by a parts shortage.

Last week's build was 18.59 percent more than the year-ago week's 140,244.

Year-to-date, 4,790,792 cars have been assembled, 3.88 percent more than the 4,611,962 completed last year at this time.

Companies shared last week's targeted production as follows: General Motors, 58.71 percent; Ford, 19.80 percent; Chrysler Corp., 15.03 percent; Honda of America Mfg. Co., 1.89 percent; American Motors, 1.65 percent; Volkswagen, 1.13 percent; New United Motor Mfg. Co., 1.02 percent, and Nissan, 0.77 percent.

GM's Pontiac G and Lakewood (Ga.) plants worked two overtime shifts Saturday (July 20).

Chrysler's Jefferson (Detroit) plant is closed this week (July 22) for model changeover, with production slated to resume Aug. 5.

Chrysler's Sterling Heights (Mich.) plant also is down this week for vacation and model changeover. The plant is due to reopen Aug. 19.

Chrysler's St. Louis plant (No. 2) is slated for two nine-hour daily shifts this week.

Ford scheduled daily overtime this week at the following plants: Chicago; Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Overtime is scheduled Saturday (July 27) at Ford's Chicago plant.

Record model runs for Chrysler Canada

WINDSOR, Ont.—Chrysler's plants in Canada, which built out their 1985 models last Friday (July 19), posted records at both facilities, the company said.

The Pillette Road plant built 125,207 full-size vans in the 1985 model run, topping the previous record of 121,540 set in 1984. The minivan plant built 274,296 units, topping the previous record for the plant by 3 units: 274,293 compact cars in 1973.

AMC workers OK contract; Wisconsin plants survive

DETROIT.—UAW members at American Motors' plants in Kenosha and Milwaukee have ratified a three-year concessions contract which guarantees that the two plants will stay open at least until 1989.

The workers approved the pact by a vote of 3,994 to 984, or 80 percent. The agreement expires Sept. 16, 1988, and covers about 8,000 workers in Kenosha and Milwaukee.

The contract contains job security provisions, reduces union representation, cuts wages by 61 cents an hour, allows the company to pay back the Employe Investment Plan through profit sharing, reduces paid time off and provides annual lump-sum payments in the final two years of the agreement instead of the traditional annual improvement factor.

"UAW-AMC members have taken the most responsible positive action available to them to save their plants and begin building a solid foundation for their future and that of AMC as a major employer in Wisconsin," said UAW Secretary-Treasurer Raymond Majerus, head of the union's AMC department.

Truck makers schedule 63,818 units, up 48 pct.

With production resuming last week at plants of Ford Motor Co., International Harvester and Nissan Motor Mfg. Co., U.S.A., domestic truck output of 63,818 units was 47.81 percent more than the previous week's 43,175.

The three manufacturers had been down two weeks for vacations.

Last week's output was about the same (down 0.71 percent) as the year-ago week's 64,277.

So far this year, 1,919,166 trucks have been built, 9.65 percent more than the 1,750,207 completed last year at this time.

American Motors' Jeep plant in Toledo closed for vacation last week. It is scheduled to reopen July 29.

After the vacation break at International Harvester's Springfield (O.) plant, production resumed at a slower pace last week to adjust inventories. With one line down, output was cut by 72 units a day.

Ford's Louisville plant built the one-millionth Ranger and its four-wheel-drive version, Bronco II, on July 16, 3½ years after production of the Ranger began. (Output of the Bronco II started in January, 1983).

That was a record pace for a single Ford plant, the company said.

General Motors scheduled two overtime shifts Saturday (July 20) at its No. 2 and No. 5 plants in Pontiac.

Ford has scheduled daily overtime this week (July 22) at its Kansas City, Twin Cities, Louisville, Norfolk and Wayne (Mich.) plants.

Canadian autos post lowest week this year

Vacations last week cut Canadian car production to its lowest point this year.

Ford Motor Co. plants were closed last week for their final week of vacation; General Motors' St. Therese (Que.) was down for its first of two weeks' vacation, and American Motors' Brampton (Ont.) plant continued its six-week vacation.

The manufacturers planned to build 10,785 cars last week, 24.64 percent fewer than the previous week's 14,312, and 9.66 percent fewer than the year-ago week's 11,938.

Year-to-date, 585,738 cars have been assembled, 7.03 percent fewer than the 630,104 completed last year at this time.

Truck makers estimated a build of 12,989 units last week, down 2.46 percent from the previous week's 13,316, but 117.39 percent higher than the year-ago week's 5,973. (Last year's total reflected vacation downtime at several plants.)

The truck build this year is approaching half a million; 498,832 units were completed by the end of last week.

This year's pace is 7.49 percent ahead of last year's at this time, when 464,077 trucks had been assembled.

It was reported earlier that Ford plants were scheduled to resume production July 15. They are due to reopen today (July 22).

Chrysler Corp.'s Windsor (Ont.) plants are closed for vacation and changeover this week. They are scheduled to resume production Aug. 5.

Brazilian VWs traveling Detroit roads

This Brazilian-built VW Parati station wagon, kin to the German Polo/Derby, is one of several spotted near Volkswagen of America headquarters north of Detroit. VWoA is evaluating whether to bring in the Brazilian cars as price leaders: Less than $5,200, sources say. Parati/Polo/Derby is smaller than the former Rabbit.

Saturn labor pact OK'd; Tennessee likely home

By Marjorie Sorge and Michelle Krebs
Automotive News Staff

CHICAGO.—The UAW's executive board Friday overwhelmingly approved a contract to cover workers at General Motors's Saturn Corp., clearing the way for the auto maker to announce the location for the plant.

And by late last week, it was expected that Spring Hill, Tenn., a town of about 1,000 people in the midst of scenic horse country, would be Saturn's new home. GM was expected to hold a news conference in Tennessee to make it official.

The contract approved by the UAW's 25-member executive board turned out to be similar to the outline for the agreement distributed several weeks ago but with more detailed language.

However, UAW President Owen Bieber warned that the contract did not represent the "Saturnization"—as GM Chairman Roger B. Smith has referred to it—of the auto industry. Bieber sent GM a letter to that effect.

"We view the Saturn agreement as a special case and not a precedent for any other facility," Bieber told reporters in Chicago.

The contract provides for a two-class workforce divided into those who do not have layoff protection and those who cannot be laid off except under extenuating circumstances.

Initially, the 6,000 Saturn jobs will be offered to GM active workers and those on the inactive rolls. Those jobs will receive the lifetime employment coverage.

Later, outsiders will be hired and they can move to the permanent job status through seniority so that at least 80 percent of the workforce ultimately will have lifetime job status.

The contract extends from now until one year after the first car is built. Negotiations on another contract will begin midway in the first production year.

The starting wage is $13.45 an hour for production workers; $15.49 for skilled workers. There is one job classification for production workers and three to five for skilled workers.

In addition, quarterly payments will reflect increases comparable to those received by other GM workers, cost-of-living increases, performance and attendance bonuses, profit sharing and any increases in negotiated in the 1987 UAW national contract.

The contract further contains a clause demanding that a "high degree" of domestic content be used in Saturn cars, though no specific percentages are spelled out.

The pension program will be patterned after the pension plan covering workers at the GM-Toyota joint-venture plant in California. However, the union is waiting to see how it works there before it firms up details for Saturn's pension plan.

There is a no-strike clause, but either side can seek to reopen negotiations at any time.

It appears that despite all the perks offered by the 39 states which had vied for the coveted Saturn plant, GM will not receive all that much from Tennessee.

"If Saturn comes here, it is a strong statement about the way we are moving," Tennesee Gov. Lamar Alexander said at a press conference late last week.

"We are not in a bidding war. We can't be in one, and we don't think it is a good policy to be in one," he said, noting that it would be in violation of the state's constitution to offer incentives like

Company will also get cars from NUMMI

Toyota plants due in U.S., Canada

By Francis J. Gawronski
Tokyo Bureau Chief

TOYOTA CITY, Japan.—Toyota Motor Corp. last week ended the speculation about its plans to produce cars in the U.S.

And the Japanese company surprised the auto world by announcing that it will build not one but two assembly plants in North America by 1988—one in the U.S.(200,000 cars a year) and the other in Canada (50,000 cars a year).

In addition to the two new plants, Toyota also said that it would supply its U.S. dealers with a 1,500-1,600-cc Corolla-type car through New United Motor Mfg., Inc., the Toyota-General Motors joint venture in Fremont, Calif. NUMMI will begin making cars for Toyota in the fall of 1986 at an annual rate of 50,000.

Among Japanese car makers, Honda Motor Co. and Nissan Motor Co. are already building cars in the U.S., while Mazda Motor Corp. is preparing to produce vehicles there. Honda also is building a plant in Canada that should be ready to assemble cars in 1987.

Eiji Toyoda, Toyota chairman, said the U.S. plant, to be built on a site yet to be selected in the Midwest or mid-South, will produce a 2,000-cc class car at an anual rate of 200,000 units, beginning in 1988. The company hinted that the car may be a version of the Camry series.

The smaller Canadian plant will have an annual capacity of 50,000 units and will begin producing a 1,600-cc model, possibly a version of the Corolla series, also beginning in 1988.

When in full operation, Toyota's three new production sources could supply approximately 300,000 more vehicles to its North American dealers.

The new plants in the U.S. and Canada also will permit Toyota to ship cars tariff-free across the U.S.-Canada border as the sales demand for cars varies from time to time in each country. However, Toyota said the determining factors in building the Canadian plant were requests for it from dealers and the Canadian Government.

When asked during a press conference whether the additional supply of cars would necessitate

Makers, dealers 'concerned,' but helpless

Haulers' strike halts flow of cars

By Richard Johnson
Detroit Reporter

A nationwide auto transporters' strike by more than 20,000 Teamsters-represented truckers has halted the flow of new cars and trucks to dealer showrooms.

The impact may be softened by plant changeovers and a recent climb in inventories. But dealer spokesmen were concerned late last week that the strike will quickly shut off supplies of hot models, tie up customer orders and possibly cause a ballooning of 1985 models on the eve of the new model year.

The walkout began at midnight last Thursday (July 25) after two days of meetings in Washington between Teamsters and the nation's car haulers, and was sanctioned by the union's general executive board.

Earlier, Teamsters Vice President Walter Shea had dismissed the final offer from negotiators for the auto transporter industry as "totally unacceptable."

"Obviously, we are disappointed," said R. Ian Hunter, executive director of the National Automobile Transporters Labor Division.

"We bargained in good faith and made what we thought was a very fair offer, including a substantial wage increase package. This could have a tremendous impact on the automotive industry."

"If this strike lasts more than a few days, auto production will certainly be affected," said Hunter, who added that no date has been set for new negotiations.

Spokesman for the Big Three domestic auto makers said last Friday that it was too early to gauge the affects of the walkout or say how long before plants are forced to close. The company spokesmen were also unaware of any alternative distribution systems set up by manufacturers.

"We're concerned about the effect of a prolonged strike," said a Chrysler Corp. representative Friday morning. "But in the short term we have model changeover. We have two plants already down, three going down today and the remaining two (shutting down) next week, and nothing is coming back until the week of Aug. 5."

During the early stages of a strike, he said, Chrysler facilities could absorb some of the overflow.

"Most of our plants have ade-

Hard line on subsidies is adopted by NADA

By John A. Russell
New York Staff Writer

NEW YORK.—After six weeks of heated controversey with many of its members, NADA has terminated its negotiations with the House Energy and Commerce Committee on the anti-fleet-subsidy issue.

NADA President William J. Symes said the talks broke down after Rep. John Dingell, Michigan Democrat and chairman of the committee, told the NADA negotiating team he could not agree to its requirements.

Those requirements were that the association will not support a bill permitting fleet subsidies and also preempting states from regulating the subsidies on their level.

That move by NADA—taking a hard line on those two issues—marks a reversal of the earlier position taken by the NADA leadership which basically said the subsidy price issue was dead and the

NHTSA official savages Japanese subcompacts

Where death risk is the greatest

By Helen Kahn
Washington Bureau Chief

OXFORD, England.—Japanese subcompacts are more likely to be involved in the types of highway accidents that cause deaths or serious injuries than their European and American counterparts.

Not only do the Japanese small cars have more single-occupant accidents and rollovers—whether before or after impacts—but the risk of death is also much higher than for comparable European or U.S. cars

In addition, Japanese subcompacts also have a higher risk of the rarer but extremely serious fire and explosion accident than the European cars but not higher than the U.S. subcompacts.

Those are basic findings of two research papers by Dr. A.C. Malliaris, director of NHTSA's Office of Vehicle Research. The papers were presented at the Tenth International Technical Conference on Experimental Safety Vehicles at Oxford in July.

The views (those of the author and not necessarily NHTSA) were some of the most startling to come before the international audience of technical experts. They are more disturbing since there is no immediate and obvious explanation—they are merely what careful analyses of years of the best available accident data show.

At least on the surface, there appears nothing that is significantly different between the Japanese small cars and the European and U.S. subcompacts.

That in itself tends to raise the question of whether there is indeed a significant but unknown difference among subcompact cars or whether the Japanese have merely been caught in the forefront and the pattern may eventually be extended to that entire market class, wherever made.

Special attention was given to front-wheel drive in 1983 models: This was 72 percent for Japanese subcompacts, 99 percent for European, 80 percent for U.S. In wheelbase and weight categories, U.S. subcompacts were getting lower but the European and Japanese were getting bigger.

Other factors—driver age, sex, alcohol involvement, time and place of travel, road problems, etc. —were basically no different for subcompacts, nor for Japanese subcompacts, than for other vehicles. The high-risk vehicles—trucks, motorcycles, commerical trucks, sports cars—were eliminated.

Malliaris looked at the last 10 years of the types in which there have been enormous changes in the mix, design, engineering and new components and equipment. He noted that a recession had limited travel, especially for the higher-risk teenagers, and anti-drunk-driving and seat-belt-use campaigns had been mounted.

The first Malliaris paper reports that the "risk of new-car involvement in all types of fatal accidents per 10,000 new-car registrations" is higher for Japanese subcompacts.

It is not only somewhat higher for impacts with motor vehicles, but Japanese subcompacts collide even more often with an object and they suffer much, much higher overturns and rollovers as a subsequent event to impact.

The overturn rate for calendar

Adding to the Firebird

Contempo Vans, Sun Valley, Calif., replaces the original hatchback on Pontiac's Firebird with a custom rear deck of steel-reinforced fiberglass and a new window, and has added front and rear fender flares, rocker panels and door extensions. A similar package is available for the Chevrolet Camaro.

Problems carried to factory doorstep

Angry Peugeot dealers organize

By John A. Russell
New York Staff Writer

NEW YORK.—In an effort to combat what they term unresponsive management at Peugeot Motors of America, 44 dealers have formed the Northeast Peugeot Dealers Assn.

Their first move was to send a representative to France to lay their problems on the doorstep of the factory.

Ben Chamis, president of the association and general manager of Ken Smith Motors, Ridgewood, N.J., told Automotive News that a series of events led to the formation of the association. But their biggest complaints center on distribution, advertising and marketing of the Peugeot 505 cars in this country, he said.

"The dealers are very unhappy about what's happening with Peugeot," Chamis said.

Consequently, he was sent as their emissary to Paris to talk with Peugeot management. The problems were presented in writing, he said, but there was no resolution at the time.

PMA President Pierre Lemaire was slated to be in France this week and, according to Chamis, the matter will be discussed.

Ed Doran, a Dallas dealer and president of the Peugeot Dealers Council, countered many of Chamis' objections. He said most of the alleged problems have been corrected.

On the distribution, Chamis said, PMA's selection of model mix from the factory on the 505 causes problems. Under the system, PMA selects the models and this year the company ordered 25 percent diesels.

"Mercedes can sell that amount," he said. "We can't."

Another example, he said, was bringing the Peugeot Turbo 505 gasoline-engine model to the U.S. available with only the 5-speed transmission. The Peugeot market, according to Chamis, is made of primarily automatic transmission cars, but PMA "flooded the market" with the 5-speed version.

He said that 5-speeds account for only 20 percent of Peugeot's sales, and dealers have had to sell them at little or no profit.

"When they make a mistake, it takes six to nine months to recover," Chamis said, since the cars are built specifically for the U.S. market.

Slow buildup of production speed at automated plants blamed

'87 GM regular pickups to be late

By Joseph Bohn
Truck Editor

ANAHEIM, Calif.—General Motors' new line of 1987 full-sized, light-duty pickups will be delayed about six months. They'll bow as midyear entries because of the longer startup time required in automated plants, according to a company official.

The 1987 Chevrolet/GMC light-duty pickups will be built in a new $500 million facility in Fort Wayne, Ind.; in a Pontiac plant that formerly built medium duties and is being expanded and upgraded, and in an Oshawa (Ont.) plant that is also being modernized.

They will be GM's first all-new line of light-duty conventionals in 14 years.

Confirming reports of the delay, John D. Rock, manager, GMC Truck & Coach Operation, said, "The one thing we're learning is that automated plants have an acceleration time of about 35 weeks. Under our old manufacturing process, it was about 14 weeks.

"If you take the Orion plant experience and the experience we had in Baltimore on the M van plant and the experience we're now beginning to have (on the new pickup plants)—that means you have to overlap those products. You literally have to build some trucks and park them," he said.

Getting quality in volume is the key to the delay, Rock added, because the light-duty conventionals are GM's bread-and-butter trucks.

"If we brought those trucks out like the M van, we'd have a helluva problem," he said.

GM can't afford to be without an ample supply of light-duty trucks at all times, and it can't afford as expensive a launch as the new pickups will represent without having a good supply in dealers' hands at public intro.

"You've got to literally be building both of them (old and new versions of the pickups) at the same time to satisfy the market," Rock said.

Sources had previously credited the trucks' delay to cost-cutting efforts.

If GM saved money, fine, Rock said, but that would only be a side benefit of the delay.

He anticipated production on the new trucks would probably start "just before Christmas, 1986, because then you can shut down for Christmas and adjust everything you've found, and then come back after the first of the year and start that acceleration."

GM doesn't have a handle on when it will publicly introduce the new pickups, because of major variables affecting its plant conversions, Rock said.

But it now appears the new trucks will be delayed until at least March, 1987.

GM's new truck line will go against redesigned conventional pickups also being offered by Ford. The latter are expected to debut in the fall of 1986 as 1987 models.

Exterior changes on Ford's pickups will be much less dramatic. GM's trucks will shed on average of nearly 500 pounds of weight, according to industry sources. Exterior dimensions will be about the same as those of present models. Inside, they will have a bit more hiproom, shoulder room, etc.

GM is also expected to introduce some additional new models-like a Maxi-Cab. GM currently has Maxi-Cab versions of the S-10/S-15, but none in the full-sized line.

The Maxi-Cab allows extra jump seats or a small second bench in two-door models. (Ford currently offers comparable Super-Cab style full-sized pickups in its F-150 and F-250 series.)

In styling, the new GM trucks

Car sales drop again; 4th period in a row

By Jenny L. King
Detroit Reporter

New-car sales for July 11-20 were off for the fourth consecutive period as U.S. makers reported a 7.22-percent decline.

The 216,938 total, though below 233,826 from a very strong mid-July in 1984, stacked up well when compared with years going back to 1979.

The series of sales drops narrowed the gap in year-to-date numbers: 1985 is only 1.00 percent ahead of 1984, with sales of 4,705,-781 compared with 4,659,195.

The mid-month total 216,938 included increases for Ford Motor Co., Chrysler Corp. and Honda.

General Motors continued its tailspin, down 13.94 percent to 120,124 from 139,587 last year. Volkswagen and American Motors both lost ground, and Nissan is in its first year as a domestic maker.

Ford reported a 6.57-percent boost in sales, to 56,716 from 53,-219. Chrysler was up 3.33 percent, to 29,749 from 28,791, and Honda sales of 3,603 were up 31.83 percent from 2,733.

AMC's estimated mid-July sales of 3,730 were down 48.76 percent from 7,280 a year earlier. VW dropped 18.05 percent, to 1,816 from 2,216. Nissan sales were estimated at 1,200 U.S.-built cars.

GM's share of the mid-month market dropped to 55.37 percent from 59.70 percent last year. Ford was up more than three percentage points, to 26.15 percent from 22.76 percent, and Chrysler moved up to 13.71 percent from 12.31 percent.

AMC plunged to 1.72 percent from 3.11 percent. Honda had 1.66 percent, up from 1.17 percent; VW slipped to 0.84 percent from 0.95 percent, and Nissan had 0.55 percent of this year's market.

Domestic makes reporting mid-July increases were Dodge, up 11.49 percent; Plymouth, up 3.62 percent; Ford, up 7.47 percent; Mercury, up 3.44 percent; Lincoln, up 10.27 percent, and Honda, up 31.83 percent.

At GM, Buick was down 25.50 percent, Cadillac was off 12.84 percent, Chevrolet dropped 15.98 percent, Oldsmobile was off 5.47 percent and Pontiac dropped 6.57 percent.

Chrysler sales were down 5.16 percent; AMC was down an estimated 40.00 percent, and Renault dropped 49.41 percent.

With nine selling days in the period both this year and last, the daily rates were 7.22 percent apart, with a 24,104 average this year versus 25,981 in 1984.

Chevrolet's Celebrity was the top-selling nameplate, followed by Chevrolet Cavalier, Ford Escort, Oldsmobile Cutlass Ciera and Oldsmobile 88.

Market share also climbs for May

Import registrations rise 6 pct.

By Jenny L. King
Detroit Reporter

Registrations of new imported cars in the U.S. in May climbed 6.15 percent above the year-ago total for the month and gained 0.70 percentage points in their share of the market.

Figures from R.L. Polk & Co. showed imported cars claiming 23.14 percent of the May market, up from 22.44 percent a year earlier and up from 23.05 percent in April, 1985.

May import registrations numbered 211,025 this year compared with 198,796 in 1984. In April, the import figure was 215,602.

Four of the top 10 imports increased their shares of the import market May to May with the first-place car, Honda, making the greatest advance. Honda (whose registrations include imported and U.S.-built cars) gained 1.11 percentage points, moving up to 20.72 percent from 19.61 percent.

Second-place Toyota edged up 0.37 percentage points, to 19.34 percent from 18.97 percent. Audi was up 0.28 percentage points and Mercedes-Benz gained 0.19 percentage points.

Nissan, occupying third place, slipped 1.70 percentage points, finishing at 16.33 percent compared with 18.03 percent in 1984. Volkswagen, Mazda, Subaru, Volvo and BMW all lost ground.

Ten imports accounted for 88.73 percent of the import total, down from 90.49 percent in May, 1984.

At the end of five months, import registrations were up 8.14 percent and their share of the market increased to 24.30 percent from 23.84 percent. January-through-May registrations totaled 1,053,764 this year compared with 974,480 in 1984.

• Only Honda and BMW came out ahead of 1984 in year-to-date market shares. Honda was up 0.56 percentage points, to 20.43 percent from 19.87 percent, and BMW gained 0.24 percentage points, moving up to 3.16 percent from 2.92 percent.

Ten imports claimed 88.25 percent of the 1985 year-to-date market, down from 89.70 percent in 1984.

Japanese-built passenger cars captured 67.44 percent of the May, 1985, import total, down slightly from 67.83 percent in 1985.

German imports claimed 15.34 percent, down from 14.86 percent. U.S.-assembled imports (Volkswagen, Honda and Nissan cars) represented 9.71 percent, up from 9.37 percent. Registrations by countries of origin included:

	May, 1985	May, 1984
Japan	142,310	134,844
W. Germany	32,367	29,535
United States	20,487	18,637
Sweden	11,463	10,938
France	2,210	2,551
Great Britain	1,495	1,607
Italy	693	627
Ireland	0	57
TOTAL	211,025	198,796

After five months, Japanese imports had risen somewhat in numbers but accounted for a smaller portion of the total: Down to 69.68 percent from 70.07 percent. German cars claimed 14.24 percent, up from 13.83 percent, and U.S.-assembled imports increased to 8.72 percent from 8.10 percent. The numbers were as follows:

	5 Mos., 1985	5 Mos., 1984
Japan	734,285	682,838
W. Germany	150,087	134,795
United States	91,908	78,916
Sweden	56,120	55,395
France	10,681	12,810
Great Britain	7,768	7,256
Italy	2,915	2,291
Ireland	0	179
TOTAL	1,053,764	974,480

Registrations of new imported trucks were up 23.88 percent May to May, to 71,811 from 57,968. Toyota was were up 27.29 percent and Nissan grew by 23.55 percent. The totals were:

	May, 1985	May, 1984
Toyota	26,800	21,054
Nissan	19,738	15,976
Mazda	7,611	9,399
Dodge Ram 50	5,704	0
Isuzu	0	3,806
Others	11,958	7,733
TOTAL	71,811	57,968

January-through-May imported-truck registrations of 376,664 were up 34.50 percent from 280,041 and included a 36.82-percent gain for Toyota and a 34.10-percent climb for Nissan.

	5 Mos., 1985	5 Mos., 1984
Toyota	140,240	102,498
Nissan	109,246	81,464
Mazda	41,700	47,192
Dodge Ram 50	29,971	15,934
Others	55,507	32,953
TOTAL	376,664	280,041

Morris L-M gets Clenet

Clenet Coachworks has added Morris Lincoln-Mercury, Canton, O., to its dealer roster. Shown with an Asha Series III are Pete Bouldis, left, owner and general manager of the dealership, and Doh Keehen, Clenet sales manager at the dealership.

Sales in Japan trail year ago for 3rd month in row

TOKYO.—June sales of new cars, trucks and buses in Japan remained below their year-earlier level for the third consecutive month, according to the Japan Automobile Dealers Assn.

Sluggish June sales contributed to the decline in sales for the first half of 1985. The total was 2,045,969 units, which was 0.3 percent below the year-ago figure, according to JADA.

JADA said June sales reached 318,717 units, a dip of 1.4 percent from June a year ago. It cited the lingering effects of an increase in auto accident compensation insurance premiums in April as the reason for the lower sales.

Of the vehicle sales in the six-month period, cars accounted for 1,484,796 of the total, down 0.04 percent from a year ago, while trucks totaled 548,951, down 1.0 percent and buses totaled 12,222, up 6.3 percent.

The Japan Mini-Vehicle Assn. reported that sales of cars of 550 cc or less totaled 122,447 in June, a decline of 6.6 percent from the year-ago figure, while first-half sales jumped 3.8 percent to 765,784.

Wisconsin DOT issues study on seat-belt and air-bag use

MADISON, Wis.—The Wisconsin Department of Transportation has published a compilation of statistical data relating to the use of seat belts and air bags.

The study was undertaken to provide information for discussion of the mandatory safety-belt-use law currently being proposed in Wisconsin. The report does not present a policy position either in favor of or in opposition to a mandatory belt law, according to Robert St. Clair, the DOT policy analyst who developed the report.

The study covers a range of information from accident data to analysis of belt usage by age, sex and time of day, plus a cost/benefit comparison of mandatory laws, air bags and automatic belts.

The study found that safety belts, when properly used, provide the highest degree of protection at the lowest cost. But the report warned that the people most likely to be involved in crashes (drunk drivers, young people and those driving at night) often are not using seat belts now and probably would not use them, even with a mandatory use law.

Based on a sampling of accident reports, current seat-belt usage in the state is about 16 percent, the Wisconsin DOT said.

Seat belts are more likely to be worn by people under the age of 5 and least likely to be worn by those between the ages of 16 and 25—the age group which is most likely to be involved in accidents, the study found.

The report said that the cost of a mandatory seat-belt-use law would be small, but the benefits—measured in a reduction of injuries and deaths—would be worth between $408 million and $1.3 billion during the next 15 years.

Installation of air bags at current prices would cost Wisconsin auto buyers $920 million and save $364 million in reduced deaths and injuries from 1987-2000. Automatic belt systems would cost consumers $167 million and save $218 million during the same period, the study found.

The Wisconsin DOT said those calculations were based on the National Safety Council's estimate of the average cost of motor-vehicle injuries and deaths—$210,000 per death and $8,600 per injury.

Those figures were then applied to the reduction in deaths and injuries estimated by NHTSA for seat-belt users and the actual reductions in deaths and injuries in Canadian provinces that have mandatory seat-belt-use laws.

O'Gara, BancAmerica offer lease program for limos

By Michelle Krebs
Financial Editor

O'Gara Coachworks and BancAmerica Acceptance Corp. have teamed up to provide O'Gara dealers with a leasing program for limousine customers.

The 60-month lease guarantees that the vehicle's value when the lease term expires will be 23 percent of the suggested retail price when the lease was initiated, said Michael Haslam, president of BancAmerica. The lease is closed-end, meaning the limousine must be returned to the dealer.

Robert Johnson, vice president of marketing for O'Gara, said that as the company saw the demand for limousines rise, it also saw the need to provide its dealers with alternative financing programs.

O'Gara produces extended-wheelbase limousines based on Cadillac and Lincoln models. The company builds about 750 limousines a year.

At the same time, Haslam said BancAmerica has been expanding its automotive financing business. It now has six branches offering automotive financing services and will open four more this year.

The finance company also provides leasing and conventional retail financing to 1,100 automobile dealers in the U.S.

O'Gara and BancAmerica executives said they know of no other limousine leasing program.

The program is available to all 35 O'Gara dealers nationwide on 1985 models.

Ball joins MVMA

DETROIT.—Kevin M. Ball has been named legislative information associate in the State Relations Department of MVMA. Ball will coordinate and analyze legislative information on motor vehicle issues. He formerly was with a Detroit law firm.

27 pct. in survey say 'maybe next time'

Japanese sales may rise in Detroit

DETROIT.—More residents of this area will buy Japanese vehicles in the future, leading to a sizeable expansion of the Japanese auto market here, according to a report on a recent survey sponsored by the University of Detroit and the Detroit News.

The survey was the second telephone poll taken by a research team directed by Prof. Paul H. Tai, director of the university's Asian Studies Program.

This year's poll was taken in June and covered 844 residents in a tri-county area.

It was conducted in the light of three new events that have occurred since last year's survey: President Reagan's decision to lift auto import quotas; rising protectionism in Congress and in the nation, and Mazda Motor Corp.'s decision to invest in Southeast Michigan, the report said.

Currently, one out of six people (16 percent) here owns a Japanese car or truck, but more than one out of four (27 percent) would consider buying a Japanese product the next time he or she makes a vehicle purchase, the survey found.

However, as many as 87 percent of those polled think the American trade deficit with Japan is a serious problem. Seventy-seven percent think that Congress should pass a law to restrict Japanese imports.

The increasing consumer preference for Japanese vehicles and the rising protectionist sentiment in the Detroit area appear to indicate that the population is fairly sophisticated in its judgment on complex issues, the report said.

- By a margin of 51 to 17 percent, respondents said Japanese vehicles are of higher quality than American vehicles; by a margin of 48 to 14 percent, they said Japanese vehicles are lower priced as well.

Those surveyed were evenly divided on the question of whether Americans should buy only American cars (44 percent on each side); 12 percent didn't feel strongly one way or the other.

Eighty-eight percent of those polled feel that the President is doing only a fair or poor job in solving the trade problem.

Sixty-five percent disagreed with his decision to lift the auto import quotas, compared with 58 percent of the national sample in the Business Week/Harris poll.

Asked if they would be willing to pay $500 more for an American car than for a similar Japanese car in order to save American jobs, 68 percent of those polled in the Detroit survey said yes. Sixty-four percent said they were willing to take a pay cut to achieve the same purpose.

Sixty-four percent of those surveyed think American auto companies are not as well managed as the Japanese firms; 69 percent consider American auto workers less productive than the Japanese.

American auto executives are overpaid, said 74 percent of survey participants; 54 percent said American auto workers are overpaid.

But 43 percent said they thought the U.S. auto industry will be better off in the next 10 years; 27 percent said its condition will not change, and 30 percent said it will be worse or much worse off.

Some respondents believe that competition from the Japanese has led to significant improvements in the American industry in terms of managerial style, technological competence and commitment to product quality, according to the report.

Respondents believe that those benefits, which take time to realize their full potential, eventually will enable American companies to regain their international competitiveness, the report said.

Fifty-eight percent of those polled support the idea of having Japanese investment in their community (such as the Mazda plant in Flat Rock, Mich.); 70 percent are willing to work in a Japanese-owned company.

But 42 percent oppose Japanese investment, and 30 percent would not work in a Japanese-owned company.

Education and income appear to be important factors affecting respondents' answers to some of the survey questions, the report said.

On protectionist issues, the survey showed that only 19 percent of those with advanced degrees take the position that Americans should buy only American cars; 33 percent of those with college degrees take that position.

But as many as 64 percent of those with a high school education or less take that position.

Similarly, 54 percent of respondents with incomes of $50,000 or more would be willing to pay more money to buy an American car rather than a comparable Japanese car.

But as many as 76 percent of those in income brackets below $30,000 would be willing to pay more money for an American car.

60 pct. wage hike averts strike at VW Mexico

MEXICO CITY.—A strike that threatened to shut down Volkswagen's Puebla assembly plant was averted when management granted a 60-percent wage increase to the plant's 10,000 workers. The union had asked for a 90-percent increase.

Jose Anselmo Ochoa, director of the Independent Volkswagen Union, said union and management agreed on a direct 35.6-percent wage increase, plus the general 18 percent emergency salary adjustment granted in accord with government stipulations. Because of the pyramidal structure of wage scales at the plant, the increase came to 60 percent, Anselmo Ochoa said.

Grimm's 25th year

MORTON, Ill.—Robert N. Grimm, Bob Grimm Chevrolet, Inc., has received a 25-year-dealer award from Chevrolet.

Customer
High Interest.

For 13 years, we've been adding features to America's finest automobiles to make customers want to buy. That, after all, is the first step to making a sale—getting the customers interested. But, E & G Classics goes beyond creating simple interest. Our classic styling piques customer interest to the point where they "have to have that car!" Your customers will love E & G classic grilles, simulated convertible tops, stylish deck straps, and more. These are the kinds of high profit extras that will put the beef back into your bottom line. That's the E & G "Dealer's Advantage"—profits. All of these features are easy to sell because people want them. So, call us today for the E & G "Dealer's Advantage"—high customer interest.

Ajax Bolt & Screw honored by Ford

Louis R. Ross, center, executive vice president—Ford North American Automotive Operations, presents Ajax Bolt & Screw Division, Warren, Mich., with Ford's Q1 Preferred Quality Award. Representing Ajax Bolt & Screw and its parent company, Cold Heading Co., are Don DeSeranno, right, vice president, Ajax Bolt & Screw, and John Lee, vice president, Cold Heading. Ajax Bolt & Screw produces fasteners for Ford vehicles.

Factory vans compete with converter offerings

Continued from Page 1B

vantage in that some minivan manufacturers, like General Motors and Toyota, scheduled more cargo units than the market demanded.

GM skewed most of its early production of M vans toward cargo models, but has lately began balancing it off with more passenger versions, according to Mike Erdman, Chevrolet's truck marketing manager.

Toyota wants to sell more cargos in the conversion market to help it meet cargo van sales goals.

The cargo models, imported as trucks, are subject to a 25-percent tariff which, coupled with the cost of the conversion, pushes their price close to that of factory passenger units.

Contempo developed a conversion package to keep its price just under the factory passenger unit.

Although similar in appearance, it does not offer some of the factory features like a sliding sunroof in the main passenger area and a cooler connected to the dual air conditioning system.

Contempo built 200 for rental firms in Southern California.

Sold through Longo Toyota, 150 will go to Alamo Rent-A-Car and 50 to Enterprise Rent-A-Car. The Toyota deal pushed Contempo's small-van volume to 40 percent of its output, up from a traditional 20 percent.

Most of Contempo's business is still in full-sized conversions. About 5 percent is van pool conversions.

It is also looking at the high-top shuttle van market.

An offshoot of its van business is a car conversion for Camaro and Firebird.

The appearance package features a new louvered hatch, paint and other appearance items.

Although volumes are small, Klein considers the special vehicles as enhancing the company's relationship with dealers who carry its products.

Contempo also converts Chevrolet Suburbans and Toyota 4Runners. It also recently introduced a new high-top model called the Traveller which it hopes to position in the luxury segment between limos and 12-to-15-person commuter vans.

By continuing to bring new products to market, Klein said Contempo will be able to keep ahead of competitors in what he feels is a limited-growth market.

RV sales off, but van upturn begins in May

Continued from Page 1A

trailer shipments of 8,200 were off 9.9 percent; folding camper trailer shipments of 3,400 were off 19.0 percent, and truck camper shipments of 900 were equal to last year's.

Ford's Tarrant said towable RVs are a cyclical business, and they are coming off a peak year.

A decline in that segment is not necessarily bad news for OEMs like Ford, he added, because people who buy towables generally can't afford to buy tow vehicles in the same year they buy trailers.

Even though trailer sales are off, he added, from Ford's viewpoint it is a peak year for sales of tow vehicles.

"Based on the customer and dealer inquiries and looking at the sales rates for vehicles used in towing and the engines installed, it's knockout good business for us," Tarrant concluded.

For five months of 1985, RV shipments totaled 169,600, according to RVIA, off 9.4 percent from like 1984.

Van conversion shipments of 73,200 were off 2.5 percent from a year ago.

Motor home shipments of 34,600 were off 15.6 percent.

Within the segment, conventional (Type A) shipments of 16,700 were off 15.2 percent; van campers (Type B) at 3,100 were off 11.4 percent, and chopped vans at 14,800 were off 16.9 percent.

Towable RV shipments for five months totaled 61,800, off 13.0 percent.

Within the segment, travel trailer shipments of 40,500 were off 15.1 percent; folding camper trailer shipments of 17,900 were off 7.7 percent, and truck camper shipments of 3,400 were off 12.8 percent.

Graham's birthday gift is Subaru deal

On the occasion of his 65th birthday, Ralph Graham signs for Downey Isuzu, Downey, Calif. Representing American Isuzu Motors are James Leong, left, zone sales manager, and Joe Totaro, regional sales manager.

Subaru distributor plans aggressive advertising pitch

By Susan Gurevitz
Special Correspondent

Subaru—that nice, boxy, friendly, dependable imported car—is getting, well, aggressive.

With a new ad agency, distributor Penn Jersey Subaru is planning a new, go-get-'em ad campaign scheduled to debut this fall.

"We have very tough, aggressive promotions planned," said Tom Ong, president and creative director at McAdams & Ong, Penn Jersey Subaru's new agency.

Levine, Huntley, Schmidt & Beaver, New York, is still handling the national advertising for parent Subaru of America.

Penn Jersey Subaru is the second largest Subaru distributor with 65 dealers in Pennsylvania, Delaware and Southern New Jersey. It recently hired McAdams & Ong over three other agencies to develop its new advertising, promotion and marketing program.

Star Communications had handled the account, but "we had outgrown them," said Douglas Graham, communications manager.

So why the change? For starters, Subaru has discovered women. The importer will be steering much of its advertising toward women buyers who are between the ages of 25 and 49, sports-minded and with a median income of $36,000.

Subaru has found that 40 percent of the time, "women exerted an influence over the purchase of a Subaru outright," said Graham. "That will be an integral part of our strategy."

The advertising will cover the entire model line, including the recently introduced XT sport coupe.

Another factor is that with the easing of auto import restrictions, the competition will be revving up.

Subaru also will be stepping up its TV presence, devoting as much as 80 percent of its media placement to local market TV. "Spot TV will be a primary vehicle," said Graham.

According to Ong, Penn Jersey Subaru currently is billing $3 million, but that figure is expected to rise to $4 million by mid-1986. Radio, newspaper and magazine advertising is also planned.

AMERICAN MOTORS LEASING CORPORATION MARKET TEST

- Do you want to be assured that you can buy a used 1983 or 1984 Alliance, Encore or Eagle at auction?
- Can you get at least 34 other dealers to attend the MARKET TEST sales?
- Are you willing to bid aggressively at each MARKET TEST sale?

IF YOUR ANSWER IS YES!
WE WILL SELL EVERY CAR!*

As compared with U.S. practice

How dealerships differ in Japan

By Lawrence D. Dietz
Special Correspondent

There are only 800 or so automobile distributors in Japan, yet they have slightly more than 10,000 branches which will register an estimated 2.5 million units this year.

The average Japanese distributor measures his retail sales in thousands of units per month and can employ as many as 2,000 to 3,000 people. The main facility for Japanese dealers is similar to the largest of U.S. dealerships, but has quite a bit more volume in unit sales and repair orders.

Size isn't the only difference between the U.S. and Japanese dealer body. While in the U.S. the trend is for dealers to sell their factory's full line of cars and to add more franchises, the Japanese dealer is a single point, handling the products of only one manufacturer. In fact, he handles only one model class or distribution channel.

For example, Nissan's domestic Japanese dealers are divided into four sales channels: Nissan, Motor, Sunny and Cherry. Each of those channels handles four to six passenger-car models and two to seven commercial-vehicle models.

Nissan Sales Channel
Dealer Population
May, 1984

Nissan	903
Motor	556
Sunny	894
Cherry	788
Total	3,743

Source: Nissan Motor Co., Ltd., Tokyo

Each branch has three or four salesmen, two service technicians and a clerk. They provide neighborhood focal points for sales and service activity. Unlike the U.S., where the customer comes to the dealership, Japanese automobile salesmen go to the customer. Together, the salesman and customer determine the kind of vehicle the customer wants to see. The salesman will then bring the car to the customer.

There are two forces at work trying to change this way of doing business. One is the market itself. The younger (under 40) consumers no longer want salesmen to come to them. Rather, they want to gather information without a salesman. After the customer selects a model with its options, he is ready to negotiate with salesmen from several dealerships to get the best price.

The second force working to change this system of personal selling is the factory and the distributors. They realize that by inducing the consumer to come to the dealership, salesmen can not only sell more cars per month but the cost of sales per vehicle will drop.

As a way to give consumers product information, several of the leading Japanese manufacturers are experimenting with video displays in supermarket and shopping center locations. The displays will be mounted in kiosks and may be attended by "hostesses" or be unattended. Aimed at the younger buyer and housewife, the displays will provide product information in a non-selling environment similar to that being tested in the U.S. by Buick, Chevrolet and Ford.

The role of manufacturer and dealer associations is different in the Japanese and U.S. markets. The U.S. NADA takes a positive stand on many of the key political and economic issues affecting dealers. The Japanese association on the other hand is more concerned with being the voice of dealers to the factories and in assuring that competition remains "normal."

Another way that the U.S. and Japanese dealer differ is in the way they use computers. The U.S. dealer is served by a number of data-processing vendors who specialize in the auto dealer market. Most U.S. dealers who are using in-house computers are using medium-sized minicomputers or small microcomputers.

A small number of U.S. dealers are using mainframes, or the traditionally large machine that requires a special room, special staff, special power, etc. In contrast, the Japanese computerized distributors have to use the mainframe because of their tremendous size.

Rather than buying pre-packaged hardware and software, the Japanese distributors developed their own systems. This environment will change in the near future as Japanese manufacturers design, develop and market computer systems for their dealers. Those factories, like many U.S. automobile manufacturers, recognize that the factory can reduce its own data-processing costs (because dealers are doing the data entry), get more accurate and timely information and perhaps even make a profit on the sale of computers and computer services.

The way that computers are used in Japan is very similar to their use in the U.S.

The only U.S. data-processing vendor with any degree of success in Japan was Dyatron, of Birmingham, Ala. The firm was involved in a joint venture with Isuzu. Ultimately, Isuzu acquired the venture and Isuzu is now managing it. Since General Motors owns 34 percent of Isuzu, it is likely that Isuzu will eventually switch to whatever kind of computer is being used by EDS, GM's data-processing subsidiary.

While the Japanese seem to be moving away from outside personal selling, some U.S. dealers, particularly the high-end, luxury outlets, are concentrating on it.

U.S. dealers are highly computerized, using standard software from a number of dedicated vendors while Japanese have had to make their own computer systems. The computer penetration in Japan seems to be proportionately less than the U.S. penetration.

Both U.S. and Japanese factories are becoming more involved in dealer data processing. Dealers can expect to see more factory-sponsored computer products on a worldwide level. Consumers and dealers can also see more use of video as a way to give consumers product information and perhaps train dealer personnel.

Mazda requests trade-zone status for Michigan plant

WASHINGTON.—Mazda Motor Mfg. (USA) Corp. has requested approval of a Foreign Trade Subzone for the plant it is building in Flat Rock, Mich., according to the Commerce Department's Foreign-Trade Zones Board.

Mazda told the board that its 350-acre facility will employ 3,500 persons and that about half the value of its automobiles will be sourced abroad. Mazda said imported components will include engines, transmissions, steering gears, brake assemblies, steel and some subframe components.

Mazda also said the company plans to increase domestic sourcing substantially within a few years after the plant begins building cars in the fall of 1987 and that "some exports are expected."

Foreign trade subzone status would allow Mazda to avoid duty payments on imported components until they are assembled as part of finished vehicles. Exported vehicles would incur no tariff penalty, and parts used in vehicles sold in the U.S. would be assessed at the lower duty rate for finished vehicles.

Austin Rover N.A. names Huyett, Martinez

MIAMI.—David W. Huyett has been named marketing director for Austin Rover Cars of North America, and Luis E. Martinez has been appointed service and parts director. The firm will import a British luxury car for the 1987 model year.

Huyett formerly was manager of marketing planning for Volkswagen of America. Martinez was general service and parts direector for Braman Enterprises here, the dealership empire headed by Norman Braman, who is chairman of Austin Rover Cars of North America.

As Chrysler plants begin model changeover

Car production dips to 160,622

By Louise Kertesz
Detroit Reporter

With two Chrysler Corp. plants down for changeover and vacation, last week's scheduled domestic auto production of 160,622 units dipped 1.65 percent from the previous week's 163,310.

Last week's targeted build was 24.61 percent more than the year-ago week's 128,900, a total also affected by plant vacations.

Year-to-date, 4,948,414 cars have been assembled, 4.24 percent more than the 4,747,248 completed last year at this time.

Last week's scheduled production was shared as follows: General Motors, 60.38 percent; Ford Motor Co., 21.22 percent; Chrysler, 11.70 percent; Honda of America Mfg. Co., 1.96 percent; American Motors, 1.71 percent; Volkswagen of America, 1.17 percent; New United Motor Mfg. Co., 1.06 percent, and Nissan Motor Mfg. Co., U.S.A., 0.80 percent.

Chrysler's Jefferson (Detroit) plant was closed last week for the first of two weeks' downtime for model changeover.

Chrysler's Sterling Heights (Mich.) plant also closed last week for the first of four weeks' vacation which includes changeover.

Chrysler's Newark (Del.) plant is closed for model changeover this week (July 29), with production scheduled to resume Aug. 19.

The company's St. Louis No. 1 plant is also closed for model changeover this week. It is scheduled to reopen Aug. 12.

GM scheduled two overtime shifts Saturday (July 27) at its Pontiac G plant.

Ford has scheduled daily overtime this week (July 29) at its plants in Chicago; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Plant pacts may succeed national labor agreements

Continued from Page 6

will be other forms of competitive negotiating.

The GM-UAW contract already allows plants to make changes in the agreement to make them more competitive.

The domestic auto makers have said they are not able to make money in the small-car market, but are making it up on sales of larger cars. Future markets will not allow that, Calmes said.

"It might be nice for Ford Motor Co. to say we are losing money on every Escort but we are making it up on Mercury and the big Fords," he said.

"How long can you continue to do something like that, and is there a rationale for saying that we can be non-competitive in given market segments of the business and take the loses with the notion that we are going to tack it on to the price tag of some other market?"

AMC is bascially a small-car producer with no product lines, other than Jeep, to balance the losses in that market segment.

But Calmes warned that the rest of the industry should beware because the Japanese are beginning to send intermediate-size vehicles to the U.S.

"If they send in an intermediate vehicle and make money on it too, they are going to beat your pants off," he said.

"They can be profitable with all the things they are assembling and importing into the U.S."

GM, Ford and Chrysler are either importing the bulk of their small cars or are making plans to do so.

GM is making one last-ditch attempt to build a small car competitively in the U.S. in its Saturn project. Chrysler and Ford have similar programs, Liberty and Alpha, respectively, but they have not publicly taken on the scope of Saturn.

Truck output up 4.83 percent to 67,167 units

U.S. truck manufacturers expected to build 67,167 units last week, 4.83 percent more than the previous week's 64,070 and 10.52 percent better than the year-ago week's 60,771.

So far this year, 1,986,585 trucks have been assembled, 9.67 percent more than the 1,811,457 completed last year at this point.

Last week, Ford Motor Co. began building 1986 models at its facilities in Wayne, Mich., and Lorain, O.

General Motors scheduled two overtime shifts Saturday (July 22) at its facility in Flint (No. 2). The medium-duty line at GM's Pontiac No. 2 plant was also slated for two overtime shifts Saturday.

Ford has scheduled daily overtime this week (July 29) at its plants in Kansas City, Norfolk, Twin Cities and Louisville.

American Motors' Kenosha plant is due to resume production today after two weeks' vacation.

Chrysler Corp.'s Warren (Mich.) plant is closed this week for model changeover. It is scheduled to resume production Aug. 5.

Canada's build: 600,000 cars, 500,000 trucks

Last week, Canadian car production for the year passed the 600,000 mark and truck production topped the 500,000 point.

Car ouput reached 600,000 Thursday (July 25), 14 days behind 1984; the truck build for the year reached 500,000 Monday (July 22), almost four weeks ahead of last year.

Year-to-date, 605,714 cars have been assembled, 6.64 percent fewer than the 648,797 completed last year at this time.

So far this year, 507,137 trucks have been built, 7.51 percent more than the 471,727 finished last year at this point.

With production resuming at Ford Motor Co. plants after vacation, last week's scheduled output of 20,387 cars was up 96.52 percent from the previous week's 10,374.

The prior week's total—the lowest of any week this year—was the result of vacation and changeover at plants of three manufacturers.

Last week's build was 9.26 better than the year-ago week's 18,659.

General Motors' St. Therese (P.Q.) plant is scheduled to return to work today (July 29) after being down for two weeks for vacation and changeover.

GM's Oshawa (Ont.) facility begins two weeks of vacation/changeover today.

American Motors' Brampton (Ont.) facility continues its vacation/changeover downtime; it is scheduled to resume production Aug. 5.

With Chrysler Corp.'s Windsor (Ont.) plants closed for vacation and changeover last week, truck production fell to its lowest point this year: 8,603 units, down 32.21 percent from the previous week's 12,691.

Last week's build was 19.82 percent better than the year-ago week's 7,180. (Chrysler plants were closed at that time also.)

The Windsor plants are scheduled to resume production Aug. 5.

Zimmer promotes Erwin

POMPANO BEACH, Fla.—Lee Erwin has been promoted to executive vice president and general manager, Zimmer Motor Cars Corp. Zimmer Motor Cars manufactures exotic and neoclassic cars.

Ford spends $500 million for S&L firm

By Michelle Krebs
Financial Editor

Ford Motor Co. announced last week that it would purchase First Nationwide Financial Corp., the nation's ninth largest savings and loan association, for nearly $500 million as part of its plan to diversify from the cyclical automotive industry, which faces slower growth in the future.

"This acquisition is part of Ford's plan of adding to our present strengths by developing new sources of earnings," Ford President Harold Poling said. "Acquiring First Nationwide, a major savings and loan operation, fits into our long-range plans of expanding into complementary industries that have a record of, and prospects for, substantial growth."

Poling said Ford wants eventually to have 10 to 15 percent of its sales volume in non-automotive business, a goal similarly expressed by the other domestic auto makers. About 5 percent of Ford's $52.4 billion in 1984 sales was from non-automotive operations.

Poling said Ford, which had lost out to GM in the bidding contest for Hughes Aircraft, continues to explore areas for diversification, though he wouldn't specify those areas.

Ford had been rumored to be discussing purchase of the computer maker Sperry Corp., but Poling refused to confirm or deny if talks between the two companies are continuing.

Ford will pay $32 per share for the common stock of First Nationwide, 81.4 percent of whose stock is owned by National Intergroup, Inc., which also owns 50 percent of National Steel Corp.

James Ford, chairman of Ford

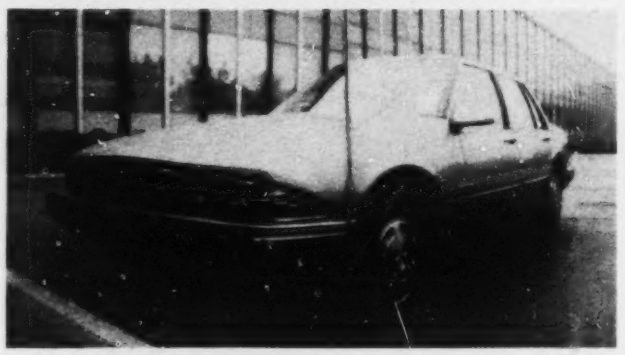
Looking ahead at GM



Gordon Fox

New family of midsize cars

A spy photographer caught this front-wheel-drive Pontiac Bonneville. It's part of the GM10 (W-body) family that will replace the current General Motors A-cars and G-cars beginning in the 1988 model year. The rounded shape differs from that of present GM cars. It's a major program that will result in coupes, sedans and wagons for Chevrolet, Pontiac, Buick and Oldsmobile in the 1988-91 model years.

U.S. dealer total down 115 for half after 2-year rise

By John K. Teahen Jr.
Managing Editor

In the first half of 1985, the domestic dealer population was unable to sustain the gains of the past two years.

The midyear Automotive News census found 20,787 dealerships handling domestic makes of passenger cars on July 1, down 115 from the 20,902 in business at the beginning of 1985.

Even more disheartening, the decline picked up steam in the second quarter. The first three months saw a dip of 38 establishments. The falloff doubled in the April-June period with a loss of 77.

Last year, each of the first two quarters brought a gain—7 and 47—and the year ended on the plus side. In 1983, the total slipped for the first six months, but a strong second half resulted in a full-year increase. Those are the only years since 1955 that the domestic dealer count has risen.

This year, Chrysler Corp. was the only manufacturer to report a first-half advance. But Chrysler's gain of six outlets was not nearly enough to offset losses by its rivals.

Elsewhere, there were drops of 55 dealerships for General Motors, 26 for American Motors-Renault, 20 for Ford Motor Co. and 15 for Volkswagen. A change in the number of intercorporate duals adjusted the net downturn to 115.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

The latest dip is distressing because it follows two good years. But the loss of 115 dealerships is not all that bad when viewed in

No end in sight for auto haulers' stoppage

Transport strike hurts imports most

By Richard Johnson
Detroit Reporter

A nationwide strike of more than 20,000 auto transporters continued late last week with no end in sight, but the work stoppage had not yet affected production schedules.

The import companies and their dealers seemed to be in more difficulty than the domestics in the first week of the strike.

Still, many domestic dealers were clearly worried about the lack of new product in the distribution pipeline. A few auto retailers around the country coped by driving cars away from shipping depots. Thousands more took no immediate action, but made plans to go to factories, railyards and ports if the Teamsters walkout drags on.

A few dealers bolstered used-car inventories in anticipation of a lengthy dispute. Some prepared to encourage employe vacations, cut back on overtime and tighten advertising budgets for the duration.

As of the end of last week, no date for resumption of talks had been set, and the consensus among auto industry observers was that the strike would last three to four weeks.

Some dealers speculated privately that the domestic companies, in the midst of model changeovers and growing inventories, may be content to wait out a short strike. However, it was clear that import companies, many of whose stocks were nearing depletion at the end of the week, want a quick resolution.

Both domestic and import companies, as well as dealer spokesmen, have expressed fear that a prolonged strike will interfere with the new-model launch by clogging dealerships with 1985 models at carryover time. There was also concern that current retail inventories will soon be short of fast-selling models.

The strike began Friday, July 25, and virtually shut off the flow of new cars and trucks to dealers showrooms. There is apparently a trickle of shipments handled by auto haulers not represented by the Teamsters. A Ford Motor Co. spokesman said "a very small amount; about 5 percent" of its factory output is trucked by UAW-represented drivers.

"Dealers here have been able to get retail cars out of shipping depots, but how long that is going to last, I don't know," said Bill Cammarano, a Ford dealer in Needham Heights, Mass., just outside Boston, and a member of NADA's board of directors.

"They tell me they are running into pickets, but there is no real problem yet. However, these things have a way of escalating. You can't tell what is going to happen a week from now."

Cammarano said dealers have been driving away only customer-ordered cars, and he predicted that the special pickups are only temporary.

"We need product and we're not getting it," said Marv Hartwig, a Lincoln-Mercury-Nissan dealer in Iowa City and a NADA director. "Ford has a procedure in place whereby we can drive cars out of the storage lots, and we may be doing some of that before another week is over."

Al Shockley, another NADA board member, with Volkswagen-Audi and Honda stores in Frederick, Md., said he was told informally by representatives of those firms that there would be no port pickups. But he said he received a telegram from Honda expressing optimism that the strike will be over soon.

"At this point we are stocking up more on used cars," said

breaking news

Toyota organizes North American plant projects

NAGOYA, Japan.—Toyota Motor Co. has established a North American Project Office and appointed a staff to take charge of the U.S. and Canada plant projects. The new office, headed by Kaneyoshi Kusumoki, Toyota vice president, will oversee site selection, plant construction and local operation. Toyota also set up a machining department at its Tahara plant to manage production of cast aluminum for an engine to be unveiled in 1987 and to process and assemble engines and transmissions. The plant is expected to supply components to new North American assembly plants.

Service Index slides after 5 monthly gains

By Jack Walsh
Service Editor

The rate of growth in franchised dealers' parts and service volume plunged in June after significant gains in the first five months of the year.

Shop business during the month, according to the Automotive News Service Index, was only 0.8 percent higher than volume in June, 1984, with declines in two of the survey's six categories.

In the first half of 1984, when monthly shop increases were much higher than this year, June also was the weakest month. A year ago, however, dealers' June service business was 9.2 percent greater than the same month in 1983.

Through June, parts-and-service volume was 8.8 percent higher than last year, and gains were impressive in all six indicators. In the first six months of 1984, shop business showed an increase of 17.3 percent over that of the previous year.

In June, sales of shop parts—those used in customer-paid and warranty repairs—was the strongest indicator, with an increase of 3.6 percent over a year ago. Customer-paid and warranty labor sales during the month rose 1.9 percent over last year.

Gross profit on all labor, parts and accessory sales—the most important indicator from the dealers' view—was up 1.2 percent in June over 1984, while sales of all parts and accessories were up only 0.1 percent.

During the month, sales of parts to outside customers declined 2.6 percent from a year ago, and the number of repair orders written—customer-paid and warranty—was off 0.3 percent.

Labor sales scored the biggest

But quarter, half are second-best

Auto makers' profits dive 28 pct. for 1985

By Michelle Krebs
Financial Editor

The Big Four auto makers enjoyed record sales for the first half and second quarter of 1985 while profits for the periods made their second-best showing.

Combined sales for the companies totaled a record $45.5 billion in the second quarter, up 8 percent from last year's $42.0 billion.

Net income for the four amounted to $2.4 billion, off 28 percent from 1984's record second quarter of $3.3 billion.

For the first half of 1985, the four companies combined had record sales of $89.0 billion, up 6 percent from $83.9 billion in sales in the first half of 1984.

Income for the companies totaled $4.7 billion, down 28 percent from 1984's record first half of $6.5 billion.

General Motors and Chrysler Corp. set dollar sales records for the second-quarter and six-month periods while Ford Motor Co. and American Motors had sales dips.

The Big Three auto companies individually had their second-best performances ever for profits, with 1984 being the record-setting year. Only AMC suffered a loss.

Second-quarter earnings for GM dropped 28 percent to $1.16 billion from $1.61 billion, which included a tax credit. Sales amounted to $25.06 billion, up 16 percent from the $21.58 billion in the same quarter a year ago.

For the first six months of 1985, GM's net income amounted to $2.23 billion, down 31 percent from $3.22 billion earned in the first half of 1984. Sales in the first half of this year totaled $49.24 billion, up 11 percent from $44.47 billion in the first half of 1984.

GM's sales for the quarter were its best of any quarter and first-half sales hit a new high. GM's profit performance both periods was its second best, behind 1984.

Ford reported net income of $699 million for the quarter, off 23 percent from the record $909 million earned in the second quarter of 1984. Sales for the quarter amounted to $13.8 billion, down 2 percent from $14.1 billion in sales in the same quarter a year ago.

For the first half of 1985, Ford earned $1.5 billion, off 18 percent from $1.8 billion in the first half of 1984. Sales for the half amounted to $27.0 billion, slightly less than 1984's $27.1 billion.

Ford blamed lower sales on production losses associated with new-model changeovers in North America and lower sales in Latin America.

Ford's performance, in terms of sales and profits, gave the company its second-best first half and second quarter in history, with the same two periods in 1984 maintaining first place.

Both Ford and GM blamed lower earnings on high costs of investments in new products and facilities.

Chrysler had a drop in earnings because it resumed paying taxes this year. Net income amounted to $596 million, down 26 percent from the $803 million earned in the same quarter a year ago, a

Checking out a Zimmer Classic

Robert Zimmer, right, president, Zimmer Motor Cars Corp., and Lee Erwin, second from left, executive vice president and general manager, confer with Zimmer quality control inspectors on the preparation of a Zimmer Classic which will be displayed at the 1985 Automtoive News World Congress. Zimmer will speak on the state of the neoclassic industry at the World Congress on Aug. 26.

Steed called negligent in Ford P-to-R case

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Serious charges of "negligence," and a "disgraceful" record of investigation have been lodged against NHTSA Chief Diane Steed.

Specifically at issue are the allegedly defective 1970-79 full-sized Ford Motor Co. cars with automatic transmissions that may slip unexpectedly from Park to Reverse. Recently, NHTSA refused a petition from the Center for Auto Safety to reopen and expedite an investigation.

The General Acounting Office—Congress' watchdog agency— disagrees with the way NHTSA has handled the matter. GAO's findings so far disagree with those NHTSA reported to Congress and to the Center for Auto Safety and, indeed, with the report by NHTSA's own staff engineers.

Questions are now being raised in Congress about whether NHTSA properly used the data it had available and whether its conclusion of no safety problem in the cars is defensible, especially in view of its most recent staff analysis which also found a high death rate for 1984 even though fewer and fewer 1970-79 Fords are still on the road.

Rep. John Bryant, Texas Democrat, whose state ranks second only to California in the number of deaths attributed to Ford Park-to-Reverse incidents, called for Steed's resignation. One reason, he said, was the "unconscionable decision to rely" on Ford's data rather than NHTSA's own.

Bryant said 33 Texas deaths have been attributed to Ford Park-to-Reverse incidents—16 since the December, 1980, settlement with Ford which resulted in warning letters and stickers being sent to owners of the some 20 million vehicles.

Rep. Tim Wirth, Colorado Democrat and chairman of a House subcommittee overseeing NHTSA affairs, called Steed the "Rita Lavelle of safety"—a reference to a former EPA official found guilty of perjury and now serving a jail term.

Ford Motor Co. did not testify at the hearing. Although Wirth said Ford was invited and declined, Ford said flat-out that it was not asked.

The issue, however, is of paramount interest. Ford has consistently denied that its cars have a defect. It has said its change of design was meant to make shifting more comfortable and has denied it was a "fix."

In Ford's 1985 10K filing, it reported to its stockholders that it

GM confirms Tennessee as Saturn site

By Michelle Krebs
Financial Editor

NASHVILLE.—General Motors last week ended its long and much-ballyhooed "Operation: Saturn Search" by confirming that Tennessee will be the home of its Saturn car plant.

And the corporation revealed that the site actually was chosen two months ago, when the publicity binge was still at its height.

GM also said that Saturn Corp.'s headquarters and technical center will remain in Michigan.

Construction on Saturn's $3.5-billion plant in Spring Hill, Tenn., a town of 1,000 people located 30 miles south of Nashville, could begin in six months after resolving such issues as road access, worker training and education, environmental matters, water availability and the cost of taxes and utilities.

Construction is expected to take two and a half to three years and involve 4,000 workers.

GM said the Saturn complex, when in full production, will employ 6,000 workers on a $200-million payroll.

Saturn also will employ 1,200 engineering-related workers and corporate staff at two facilities in the Detroit suburbs of Madison Heights and Troy. Saturn is advertising for engineers, though some will come from within GM.

William E. Hoglund, Saturn president, said Saturn's technical people will remain in the Detroit area, "the world's center of automotive technology." The project would be delayed six months to a year, he said, if the technical people were moved to Tennessee. However, technical staff will be transferred to Tennessee as activity there progresses.

Despite all the speculation in

Dawkins quits AMC for post with Chrysler

By Richard Johnson
Detroit Reporter

Dale E. Dawkins, American Motors vice president for environmental and safety affairs, has left AMC for a new post at Chrysler Corp.

Dawkins confirmed to Automotive News last week that he has submitted his resignation at AMC and will move to Chrysler, where he spent part of his early automotive career. However, he declined further comment pending an announcement from Chrysler.

A Chrysler spokesman last week offered no further information, saying, "This is the first I've heard of it."

Dawkins, who formerly served as vice president—Product Group at AMC, reportedly will have a hand in minivan planning at Chrysler.

"I gave my resignation to the company and they have accepted it," said Dawkins last week. "I will join Chrysler, but I should let them make that announcement."

An AMC spokesman said Aug. 1 that Dawkins resigned "effective yesterday."

He said the company is not prepared to make an announcement about a replacement for Dawkins. However, he said individuals who

SVO unit would develop it from the ground up

Ford may build new sports car, Poling says

By Richard Johnsen
Detroit Reporter

Ford Motor Co's Special Vehicle Operations unit may develop a new production sports model from the ground up, according to Ford President Harold A. Poling.

Indeed, plans for launching sophisticated SVO editions of existing production cars appear to have taken a back seat to an all-new sports-car program.

In an interview with Automotive News, Poling expressed support for such a venture and confidence in SVO, a 32-man motorsport, performance-parts and specialty-car operation.

Meanwhile, Poling said he likes the Giugiaro-designed Maya two-seater sports car being touted by some industry observers as a future addition to the Ford lineup. But he declined to talk about the mid-engine Maya's place in Ford plans.

Company sources have said SVO probably will be closely involved in a two-seat, mid-engine prestige sports-car project that Ford is believed to be considering.

The nearly five-year-old performance group is responsible for the high-tech, turbocharged SVO Mustang. A revamped 1985½ version was introduced last spring.

While sales of the limited-production SVO models have been lackluster, the car has been well received by auto enthusiasts. It whetted appetites for new make-overs of existing production cars, or else a complete SVO car.

Asked if SVO will develop its own car, Poling said, "I hope so, I'd like to see that . . . they are looking at it."

Poling said Special Vehicle Operations is built for speed and is a natural takeoff point for a sports-car program.

"You look at the group and what is their strength?" he said. "Their strength is performance and, to me, that moves in the direction of a sports car. I'd like to see them come up with something like that. I think they've done an outstanding job."

Poling said SVO's previous efforts have been well received—proof, he said, that the company's performance arm can successfully design and engineer a hot car from the ground up.

"You know, the SVO Mustang is considered by buff magazine writers and sports enthusiasts to be an outstanding vehicle," he said. "So I think they have the capability to come up with a sports car."

In an interview with Automotive News last spring, SVO director Michael Kranefuss said the group is studying the concept of developing an all-new car "very, very carefully."

But he said the job would require a "total new learning process" in terms of whether SVO would be involved purely in a supervisory role—allocating work to

Resolution sought to bounce '86 CAFE cut

Senate defeats bid for 27.5 MPG

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—By a vote of 52 to 39 (with nine not voting), the Senate last week defeated a resolution to urge NHTSA to keep the CAFE standard at 27.5 MPG. NHTSA has decided to cut it to 26 MPG for the 1986 model year.

A resolution is the traditional House or Senate method of "sending a message." This one was backed by Senator Daniel J. Evans, Washington Republican, and 21 other senators, both Democrats and Republicans.

One senator, Howard Metzenbaum, Ohio Democrat, although an original sponsor, felt the move was useless and suggested instead that Congress itself act to retain the CAFE level—a very unlikely happening and one certain not to be enacted in time for the 1986 models.

Others felt that either the "fix was in" or it was not Congress' place to interfere in an agency action that had been provided for by Congress in case of need.

Arguments for and against were all over the lot and foreshadowed arguments sure to be heard Thursday and Friday (Aug. 8-9) at NHTSA's hearings on the proposed one-year rollback from 27.5 MPG to 26 MPG for the 1986 model year.

Most remarkable in the Senate debate was the total failure to recognize that any rollback would be of immense help to the European luxury cars. There was only an oblique reference to the request for relief made by the importers.

Instead, the debate centered totally on General Motors and Ford Motor Co., which took all the onus but which have, after all, a full line of models over which to average a fleet.

A frequent point made by some senators during the debate was the Chrysler Corp. argument: That Chrysler is meeting the standard at great cost and it's not fair to reward GM and Ford, the losers, who make high profits from selling their old-technology cars.

Chrysler maintains that it will be put at a competitive disadvantage if the standard is lowered and that the country itself—which still needs to conserve energy—will also be the loser.

The answer to that one in the Senate debate: Enough of this holier-than-thou attitude. Chrysler seems to forget that in 1981 it did the same thing when it asked for and received a lowering of the light-truck CAFE standards.

Besides, Congress gave Chrysler lots of federal loan guarantees to keep it from going belly up; why not let GM and Ford at least have a one-year reprieve, which amounts to extra oil use of less than two-tenths of one percent a year.

Others noted that the Commerce Department says that cutting off sales of large cars, which consumers want, could mean the loss of a million sales a year for Ford and GM and the possible loss of 110,000 jobs.

Nonsense, others said; that's an empty threat. GM and Ford have a good thing going. Those old rear-wheel-drive, big-engine, fuel-inefficient cars whose costs were written off long ago are raking in the profits.

Besides, some senators argued, if GM and Ford keep right on selling those cars (and including them as 1986s well into the 1987 model year) and the companies get a rollback on the 1987 model year, then Ford and GM can generate enough carryback credits to wipe out their potential 1984 fines. Keep the good times rolling.

Another senator chimed in cynically: "It's just greed, just pure and simple greed." It's as simple as big cars, big profits; minicars, miniprofits.

Some noted that GM and Ford argue to let the free market operate, but not when it comes to letting the Japanese compete; then what they want is "voluntary" restraints. However, the truth is that

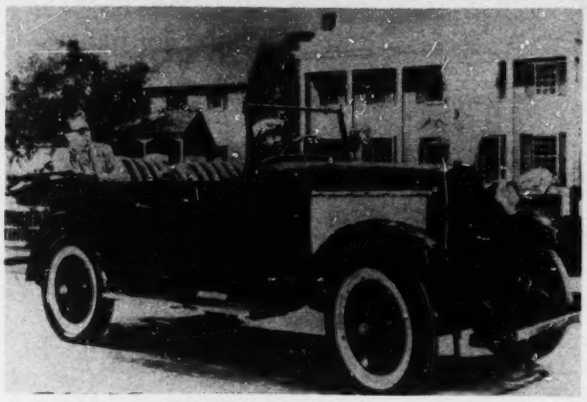
Nissan to bring cars from Taiwan to U.S. market

TOKYO.—Nissan Motor Co. plans to have cars produced by Yue Loong Motor Co. in Taiwan for export to the U.S. and other countries.

A Nissan spokesman said the firm has not determined how many cars will be exported, but it is expected that 50,000 Nissan cars will be produced by Yue Loong annually for export. The decision to build the cars there was made on the expectation that Japan's voluntary restraints on exports to the U.S. will continue indefinitely.

Details for the proposed production, which will not be governed by the Japanese quota system, will be worked out in the near future.

Nissan has acquired 25-percent ownership of Yue Loong, which has an annual production capacity of 150,000 units and now manufactures some 70,000 Nissan-type cars for sales in Taiwan.



Jack Benny's Maxwell heads for auction block

Jack Benny, in back seat, and Rochester ride in a 1911 Maxwell Touring Car which appeared in movies with Benny. The car will join about 200 other cars from the Movieworld and Pacific Auto Rental collections on the auction block Aug. 18 at the Ambassador Hotel, Los Angeles.

Dealers must do better on service—Petersen

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich.—New-car dealers received a series of verbal uppercuts here as factory and supplier brass met for an annual management briefing seminar.

Donald E. Petersen, chairman of Ford Motor Co., was the keynote speaker at the affair sponsored by the University of Michigan.

In a question session, Petersen said that on visits to plants, he invariably is asked what Ford is going to do about getting dealerships more involved in quality-boosting programs such as those in other parts of the company. Each questioner always has a horror story, he said.

"We know we have to change," Petersen said. "We are working very hard on our national dealer councils to get their attention, to impress upon them just how bad the reputation of service really is among our dealers.

"We put together some devastating tapes, just devastating. We found ways, in effect, to get every one of our dealers to sit there and listen to his own customers saying what a miserable job he'd done in selling the car in the first place and then in servicing it," he said.

Petersen said Ford began those tape sessions in 1980 and continues to use the technique. Taped surveys have been financed by the dealers as part of another dealership improvement program, he told Automotive News.

"We have to change everything about the way we do business, including how we treat the customer at the dealer level," Petersen said.

"This is one of the greatest single areas for massive improvement. It has one of the greatest

Owners 95 pct. satisfied; may spark ad campaign

Survey gives AMC high marks

By Edward Lapham
Marketing Editor

American Motors marketing people are deciding how to best use the results of a new independent study which shows more than 95 percent of its 1985 customers are satisfied with their purchases.

The result could be a new national ad campaign touting AMC customer satisfaction.

The study, conducted by Maritz Market Research, Inc., showed an overall satisfaction level of 95.3 percent for Jeep and Renault and 96.8 percent for Eagle.

"We know we had problems with our vehicles in 1983 and 1984, and we wanted to know if the effort we put into improving our cars paid off," said Peter G. Guptil, AMC sales vice president.

"Obviously, it has."

Guptil said the company wanted to "be honest with itself." That meant determining if other, less scientific studies of owner satisfaction, "done in questionable fashion," were as inaccurate as suspected.

So, a Maritz questionnaire was mailed to every buyer of new 1985-model AMC and Renault vehicles. There was no incentive, but the result was still a 37 percent response.

The average number of miles driven by respondents was 5,668, which AMC believes gave the 54,565 respondents "ample opportunity to objectively evaluate the vehicles."

The study factored out fleet buyers and all other purchasers readily identifiable as corporate purchasers. Those commercial buyers who "slipped through" gave the AMC/Renault products the same high rating, the company said.

The important results, as emphasized by AMC, included data which showed 98.7 percent were satisfied with handling ease, 97.6 percent were satisfied with riding comfort and 92 percent were satisfied with fuel economy.

In addition, AMC said, 92.9 percent of the respondents believed "they got good value" in their purchase, and 84.1 percent indicated they would consider buying another Renault, Jeep or Eagle.

The down side was that only 73 percent of the owners who responded were satisifed with their dealers' ability to fix problems, an area AMC conceded needed more work.

Overall, AMC was very pleased with the results.

The company has been particularly critical ofthe Customer Satisfaction Index by West Coast market research firm J.D. Power & Associates, and the auto maker has been sensitive to the publicity the Power study garnered.

Guptil said the "spectacular nature" of newspaper coverage of the Power study, without proper scrutiny of the methods or actual results, "hurt" AMC.

He criticized the Power CSI for a lack of scientific methodology. He blasted everything from sample size, to indexing procedures, to the lack of class-by-class comparisons and even the questions themselves and the manner in which they were weighted.

"Nowhere do they ask 'Are you satisfied,'" he said. "It purports to be an objective study, but it is done in a very sujective matter."

He also said the study is mislabeled. "They call it a '1985' study, but it is about 1984-model cars," he said.

Guptil said the Power CSI lacks validity and reliability, the two attributes by which social scientists judge surveys.

Validity means the study measures what it intends to measure, and reliability means the results are repeatable under the same circumstances.

AMC is not the only auto maker to criticize the Power methodol-

Executives tell why joint ventures gain

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich.—Ford Motor Co. is discussing an alliance with Fiat, the Italian vehicle maker, and that move points up a major developing auto industry trend—joint ventures.

The trend, which has been building slowly until now, was focused upon here at a University of Michigan automotive management briefing seminar.

Donald F. Kopka, Ford's design vice president, did not discuss specifics of any Ford-Fiat amalgamation, but he did go into reasons why such a move might be forthcoming.

"In the future," Kopka said, "We're going to have to replace most of the cars on the road so there are lots of opportunities for new types of vehicles. With rising costs of bringing a new car to market, we are rapidly reaching the point where no company in the world has enough money to do it all alone.

"Whenever you have the same needs and can pool resources and split costs to bring out a car, it makes sense to look for some joint partnerships," he said.

The three-day University of Michigan seminar is attended chiefly by representatives of supplier companies. Kopka's remarks came as he participated in a panel

Trade deficit in June ranks as 2nd highest ever

WASHINGTON.—June's $13.42 billion U.S. trade deficit was the second-highest monthly trade deficit ever, the Commerce Department reported. Record-high imports from Japan helped boost the monthly trade gap.

The U.S. merchandise trade deficit for the first six months of this year was $70.71 billion, compared with $60.8 billion for the first half of 1984.

The U.S. trade deficit with Japan increased to $4.57 billion in June from $4.24 billion in May. The June figure was slightly higher than the previous record for deficit trade with Japan, set in July of last year. The overall monthly trade defict record of $13.8 billion was also set in July, 1984.

Although the U.S. dollar has

On Pontiac 4.9-liter engines

EPA and GM face regulations dilemma

By Jake Kelderman
Washington Reporter

WASHINGTON.—The EPA and General Motors have a problem, a problem one can find only in Washington.

GM built about 700,000 1979 Pontiacs with 4.9-liter engines that do not meet federal emission standards. EPA wants GM to fix those cars, but the cars cannot be fixed without a significant loss of fuel economy and it is uncertain whether the fix will do the job.

The agency thought it had solved the problem several years ago when it agreed with GM on a novel plan to "offset" the excess emissions from the 1979 cars with lower emissions from future GM cars, but the U.S. Court of Appeals for the District of Columbia threw out that idea as illegal.

Consequently, the EPA and GM are back to square one—except for one thing: The parties who sued in the Court of Appeals now want GM to be penalized for building defective cars since there is no "complete" fix for the problem that causes them to emit more oxides of nitrogen emissions than they should.

They don't necessarily want the company to pay a fine per se. They want GM to spend the money to achieve emissions reductions elsewhere equal to at least the excess emissions the 1979 cars are putting out.

But GM doesn't want someone telling it where to spend its money. And it also wants everyone to remember that it has already spent some $2 million to modify some of its 1982 and later-model year cars to offset the excess emissions of the 1979 cars and will spend that much again over the next couple years.

GM also points out once again that only about 15 percent of the 700,000 cars involved would likely be returned to dealers for repairs; that the repair would reduce fuel economy by 0.7 MPG to 2.1 MPG, and that a program like that will do nothing to enhance the public view of the auto emissions control program.

The EPA, GM and the environmental groups have been over this several times since last spring. Last week, they took another shot at it and the results were the same as in the past.

GM is still holding out for continuing its offset program, fixing the cars that owners bring in and running some research programs like a methanol-fueled bus.

The environmentalists think that is not enough and are holding out for a fine of about $10 million or its equivalent in emissions reductions in older vehicles through repairs or catalyst replacements.

And the EPA keeps looking at the court order and thinking it will fine GM about $12 million if the company doesn't come up with something that works.

Senate votes down attempt to overturn '86 CAFE cut

Continued from Page 3

Ford and Chrysler backed quotas for the Japanese but GM did not.

But, the argument goes, had Congress not passed the 1975 CAFE law, the U.S. auto industry would have been totally wiped out by the Japanese who were already here with the fuel-efficient babies.

Besides, while the "free market" can create gasoline lines and raise or lower oil prices overnight, the auto industry cannot turn on a dime.

The oil and economic argument: Although we seem to have an oil glut, there is actually less than there was. We are more dependent on imported oil than 10 years ago; we are still largely dependent on the Middle East or Communist-bloc countries or on developing countries which will start using their energy resources as they modernize.

That argument continues: The government's reserve estimates for domestic oil have dropped by 55 percent, largely because of downward revisions of the Alaskan reserve. Since more than 60 percent of oil is used by the transportation sector, it is especially irresponsible to let vehicles off the hook.

Another point: In order for a car to count as part of CAFE, at least 75 percent of it must be made in the U.S. If the standard is lowered, the makers won't have to build as many small cars in the U.S. to offset the big ones. So they might source small cars and parts overseas, eliminating U.S. jobs.

The debate on the Evans "sense of the Senate" resolution to retain the 27.5-MPG CAFE standard occurred just three days before Congress recessed for a month.

By the time Congress returns, NHTSA will have held its hearing, closed its docket for comments and be busily writing the reasons for the decision which is not expected to surprise anyone. It is obviously too late for Congress to do anything at all for the 1986 model year.

Next operation: How to get at least two more years of reprieve.

breaking news

its affairs under federal bankruptcy laws, hopes to move operations from South Bend to Detroit. Avanti lawyer Robert Weiss said the reorganization plan, which includes a package of private and public funding, "is moving along pretty much on schedule."

Arabs end boycott of Ford

DAMASCUS, Syria.—The Arab Boycott of Israel Office has ended the trade embargo it had placed on Ford Motor Co. and eight other companies. The Arab embargo had been placed on Ford in the 1960s because Ford had invested in a manufacturing plant in Israel.

Nissan Australia's Gazelle

Nissan Australia's new Gazelle features independent rear suspension and four-wheel disk brakes. An improved noise-control package, featuring a new exhaust system, also has been added. A new option package available for the Gazelle liftback includes alloy wheels, power steering and a sunroof.

$350 million expansion set for Chrysler Kokomo plant

KOKOMO, Ind.—Chrysler Corp. announced it will invest more than $350 million in a major expansion of its transmission and die casting facilities here.

The project will include building additions as well as adding machinery and equipment to produce a new four-speed automatic transaxle the company will introduce in its 1989-model passenger cars.

"Our rapidly changing automotive technology is revolutionizing the way we build cars," said Richard E. Dauch, executive vice president for manufacturing, in making the announcement. "These same technological advancements we are applying right here will enable our Kokomo plants and our Kokomo people to compete with the best in the industry."

Dauch said there will be a total of 275 new machines. A completely new assembly line will feature laser welders, vision inspection systems, numerical control equipment for automatic tool adjustment and the latest technology for automatic assembly.

"Our Kokomo plants also will have computer-integrated manufacturing, factory information systems and automatically guided vehicles for parts delivery," he added.

Dauch said construction would begin later in July on additions that will total 495,000 square feet, a 20 percent increase in the manufacturing area. An important addition will be 60,000 square feet of floor space in the die cast plant that will increase storage capacity for castings, which now must be stored at the transmission plant.

"The expansions will be completed by year-end 1986, and machinery and equipment installations will continue throughout 1987," Dauch said.

Dauch said the production launch for the new transmission is scheduled for February, 1988. The Kokomo plants will continue building three-speed automatic transmissions, but in lower volumes. Total output is expected to increase from the present capacity of 1.3 million units to 1.5 million by the 1990 model year.

New incentives on books for AMC, Chrysler

American Motors last week jumped back on the finance-rate bandwagon with a renewed 8.5 annual percentage rate program.

It includes all 1985 Renault cars delivered between Aug. 1 and Sept. 30, and the finance program has a 48-month cap.

AMC started the program the day after it ended the rebate program which refunded to purchasers the equiavlent of the price of 10,000 gallons of gasoline.

The auto maker has used a similar APR program for much of the model year.

Chrysler Corp. also launched a new incentive last week, called the LeBaron GTS/Lancer Saver's Choice. It is similar to a program already in place for K-cars.

The program began Aug. 1 and has no announced end date.

Retail purchasers of new 1985 Chrysler LeBaron GTS or Dodge Lancer models can choose either a $500 savings allowance or an 8.8 APR finance rate with a 60-month cap.

Service Index retreats after 5 monthly gains

Continued from Page 1

increase in the first half, with the customer-paid and warranty total up 11.5 percent over a year ago. Sales of all parts and accessories ranked No. 2 with a gain of 9.5 percent.

Six-month gross profit was up 8.8 percent from the like period in 1984, and total repair orders written increased 7.8 percent. Sales of parts and accessories to outside customers were 6.6 percent higher than a year ago, while total P&A volume through June was up 5.8 percent.

April was the best month in the first six with an increase of 18.6 percent over the same month in 1984, and the May gain of 13.5 percent was the second-highest in the first half.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's franchised new-car dealers.

SERVICE INDEX
100.8★

	June, '85 vs June, '84	6 mos., '85 vs 6 mos., '84
Gross Profit on All Labor and P&A Sales	+1.2%	+ 8.8%
Repair Orders Written	−0.3%	+ 7.8%
Total Labor Sales (Customer & Warranty)	+1.9%	+11.5%
Shop Parts Sales (Customer & Warranty)	+3.6%	+ 9.5%
Sales of All P&A	+0.1%	+ 5.8%

★—Survey by Automotive News shows that dealers' service and parts business in June, 1985, was 100.8 percent of business in June, 1984. Service business in the first six months of 1985 was 108.8 percent of business in the corresponding period in 1984.

Big 4 profits down 28 pct.

Continued from Page 2

quarter in which Chrysler paid no taxes.

Chrysler sales hit an alltime high for any quarter of $6.0 billion, up 14 percent from $5.4 billion in the second quarter of 1984 and surpassing the previous record set in the first quarter this year.

For the six months, Chrysler had net income of $1.1 billion compared with $1.5 billion in the first six months of 1984. Sales set a new six-month record of $11.4 billion, compared with $10.2 billion in 1984.

Sales for the quarter were Chrysler's best for any quarter and the best for any half. Chrysler's profit performance was its second-best for the quarter and half, behind 1984.

AMC suffered a $70.4 million loss in the second quarter, compared with a profit of $4.7 million last year. Sales this year were $961.0 million, down 9 percent from 1984's $1.1 billion.

For the half, AMC's loss was $99.4 million, compared with a profit of $9.8 million in 1984. First-half sales dipped 12 percent to $1.9 billion, compared with 1984's $2.1 billion.

Dawkins quits AMC for post with Chrysler

Continued from Page 2

had been reporting directly to Dawkins will now report to Gerard Gastaut, AMC vice president—business planning and corporate affairs.

As vice president—environmental and safety affairs at AMC, Dawkins was in charge of vehicle environmental and safety matters, product analysis, corporate energy management and industrial safety and hygiene.

Dawkins joined AMC in 1971 after 14 years with Chrysler and Chevrolet. From 1971 to 1977, he served as AMC director of product cost control, director of product planning, general marketing manager and general manager of the Parts Division.

He was elected vice president of AMC's Marketing Group in 1977 and became vice president--Product Group in 1979.

Trade deficit in June ranks as 2nd highest ever

Continued from Page 3

dropped 12 percent on foreign exchange markets since February, it remains almost 40 percent above its 1980 average. Some economists believe that import prices will rise as the dollar falls in value, further escalating the U.S. trade deficit.

Increased U.S. exports late in the year may bring limited relief because exporters are not expected to feel the effects of the weakening dollar for some months yet.

Market-opening measures announced last week by Japan were met with skepticism from chief congressional sponsors of protectionist trade legislation. Most of the measures are aimed at reducing the U.S. trade deficit with Japan. The White House said it would not judge the Japanese moves until their effect on U.S. exports are known.

Report card time for Europe's auto makers

Financial results drop GM and Ford near the bottom of the class

By Richard Feast
European Editor

School's out and it's time for anxious parents to take a look at reports from the European class of 1984. The star automotive pupils showed little modesty in rushing home with the good news — early. Just how good could not be determined until the laggards reluctantly turned up with their results — late.

Now that most reports are in, it is possible to put some into perspective. In global terms, in competition with rivals from the U.S. and Japan, the overall European sales performance is only average. True, there are some outstanding world-class results, but they tend to be from the better-off neighborhoods of West Germany and Sweden.

But far too many reports from the middle-class suburbs and community-housing estates of France, Italy and Britain carry the legendary rider, "Must try harder." One particular French pupil, a model of diligence and good citizenship until recently, is now wearing the dunce's cap.

The Americans in Europe have moved in the same downward direction. They now occupy positions in the bottom half of the class, though in the past both have done much better; one American was for some time school champion. But the way in which they now are overshadowed by the showings of their big brothers and sisters in the U.S. has caused speculation that the parents will start a regime of cutting pocket money or even disowning their offspring.

More seriously, 1984 financial reports presented by Europe's vehicle makers indicate two main factors. First, no matter how small a company's production volume, if the company has a good enough image, it will grow and earn a solid financial return. Second, for mass-market manufacturers, having bright new models the public wants can do wonders for the bottom line.

Examples of the first category range from Porsche and Jaguar to Daimler-Benz and BMW, by way of Volvo and Saab. In the second case, cars like Uno and Golf have paved the way for the recoveries at Fiat and Volkswagen; the 205 would do the same for Peugeot group were it not for the distinctly average nature of the company's other products.

Underlying the mass-market scene in Europe is the unprecedented promotional war. Profit margins are being hacked back at manufacturer and dealer levels to secure customer orders. The consumer is getting better value for money than at any time in recent history, but the bargains are being paid for in corporate revenues.

The pressure is on to cut costs. Ford of Europe talks openly of the need to tackle that task. Renault's job-cutting is part of the same process. Fiat, which has gone a long way down that road already, is keenly talking of collaboration with Ford in order to cut costs. "Only a company as big as General Motors could afford to carry these (European) losses," comments Fiat group chairman Giovanni Agnelli.

GM's European operations reported a deficit of $291 million on sales of $6.98 billion in 1984. They were led by an Adam Opel postwar record loss of $236 million. Elsewhere, GM's Vauxhall and Bedford in the UK and the new Spanish company were in similar positions.

There is widespread belief in Europe that GM is prepared to carry such losses until it has overtaken arch-rival Ford in the European new-car sales race. The two are now neck-and-neck, GM having trailed Ford by a considerable margin until recently.

The chase is having its effect on Ford. Its profits have tumbled ($147 million on sales of $9.08 billion in 1984), and it is expected to turn in a deficit this year. Not so long ago — before the advent of GM as a serious competitor — Ford Europe's annual profit line exceeded $1 billion.

Ironically, while the two U.S. multinationals are charging after each other, they have fallen behind two resident Europeans who put their houses in relative order. In sales so far this year, Volkswagen group and Fiat Auto have pulled into a slight lead. On top of last year, when their financial posture improved noticeably, this can only augur well for their future.

Of the other two big-volume manufacturers, Renault's much-publicized $1 billion deficit is being vigorously tackled by new president Georges Besse, while Peugeot president Jacques Calvet

Exchange rate conversions were made at the following mid-July values for the dollar: 9.01 French francs, 2.95 Deutschmarks, 1,900 Italian lira, 0.73 UK pound, 8.56 Swedish crowns, 3.33 Dutch guilders, 166 Spanish pesetas.
+ BMW profit entry is for parent BMW AG only, as worldwide results are not consolidated.

European sales scramble

Major upsets in Scandinavian market

Leading positions in the four Scandinavian new-car markets are topsy-turvy this year. Upsets include General Motors Opel taking over as leading seller from Ford in Norway and Denmark.

Preliminary returns for the first five months of 1985 also show Toyota has overtaken Nissan to become No. 1 in Finland. In Sweden, Saab has lost its traditional second place (behind Volvo), and is fifth behind VW-Audi, Ford and Opel.

Elsewhere in Europe, VW-Audi has eased ahead of Peugeot group (PSA) in Belgium. In West Germany, Ford's familiar No. 3 slot (behind VW and Opel) has been claimed in dramatic fashion by seemingly unstoppable Mercedes-Benz.

These are among the highlights of unofficial pan-European registration figures circulating within the European auto industry. Total industry sales for five-months 1985 showed a 1.8 percent fall to 4.77 million units from the same period a year earlier.

Opel successes in Norway and Denmark are representative of the chase across all of Europe, where GM wants to be ahead of Ford. In Norway, where sales rose 34 percent to 59,300 in the five months, Opel's market share was 14.5 percent compared with 12.1 percent a year earlier. Ford fell from 14.9 to 13.5 percent, and is in danger of being overtaken by VW (13 percent).

In Denmark, Ford's 16.5 percent in the first five months of 1984 dropped to 16 percent this year, as Opel soared from 15.3 to 17.8 percent on the wings of the reception given its new Kadett. Total sales in Denmark increased 4.2 percent to 70,400.

Car buying in Finland was up almost 11 percent at 63,900 units. During the five-month period, Toyota moved to 12.3 percent market share from 10 percent last year. That was enough to move above Nissan, whose 1984 share of 11.9 percent slipped to 11.5 percent the first five months of this year.

An unexpected boom in Swedish demand — up 15 percent to 115,300 in the five months — caught Saab flat-footed. Underestimating domestic demand, the company was unable to redirect promised export orders to Swedish customers.

Thus, from being a distant second to Volvo last year and for many years past, Saab fell to fifth this year with 10.8 percent, behind Volvo (27.2), VW-Audi (11.9), Ford (11.7) and GM Opel (11.1).

In Belgium, PSA's combined Citroen and Peugeot/Talbot networks have been market leaders for some time. In the first five months of 1984 their share was 13.1 percent compared with VW-Audi's 12.6 percent. This year the five-month shares are 14.2 percent VW and 14.1 percent PSA. Industry sales in Belgium were down 3 percent at 192,100.

A serious sales slide in West Germany resulted in market share losses by BMW, Audi, Ford and Opel. Only VW, Mercedes-Benz and Porsche increased. The most dramatic shift in positions was by Ford and Mercedes.

Ford's share fell from 12.1 to 9.8 percent in the five-month period. Mercedes outsold Ford in Germany in during that time as its share improved to 11.3 percent compared with 9.4 percent a year earlier. The VW nameplate increased to 22.9 percent to retain first place. Second-place Opel's share fell to 15.9 percent.

— Richard Feast

In celebration of the company's 100,000th car, these special Rolls Royce Centenary models are ready for shipment. The U.S. will receive 12, the Middle East and Europe will share five and the UK market will have eight.

Rolls has much to celebrate

A Silver Spur Centenary and rising sales

By Richard Feast
European Editor

General Motors does it every few working days. Rolls-Royce did it for the first time August 2. The British company built its 100,000th car, 81 years after entering the automobile business.

Milestones like that should not go unnoticed. Keys to a special Silver Spur Centenary model officially were handed over — amid much pomp at the Crewe, England, factory — to chief executive Richard Perry by the company's two oldest-serving employes, Margaret Green and Jack Goodwin. The work force of 3,800 watched and clapped.

The royal blue model will stand beside two other valuable properties — a 1904 10-horsepower, two-cylinder open tourer; and the company's original demonstrator, a 1907 Silver Ghost — in a new customer reception center planned for next year.

Over the next few weeks, 25 identical Centenary replicas will be delivered around the world. The U.S. will have 12, the Middle East and Europe will share five, and the UK market will receive eight. With a (UK) price of $109,000, it may be the most exclusive limited-edition car ever made.

Among the Centenary's distinctive features are inlaid monogrammed door-cappings, inlaid picnic tables, engraved door-sills, a commemorative plate in the glove box and matching spirit-flasks in the cocktail cabinet.

The interior is finished in champagne-colored hide, which is also used to trim the contrasting dark blue carpets. Each owner will receive a selection of silver trinkets including key ring and ballpoint pen.

Crewe has been the home of Rolls-Royce and Bentley since 1946. It has accounted for three-fourths of all Rolls production in a factory that at one time manufactured the famous Rolls-Royce Merlin aero engine.

Up to the start of World War II, the cars were made at plants in Derby and Manchester, England, and for 12 years in Springfield, Mass.

The 100,000 include all Bentleys built after Rolls-Royce bought the Bentley Motor Co. assets in 1931. Bentley — now being seriously promoted — was a victim of the Great Depression.

Rolls-Royce has had its ups and downs, including a spell in receivership from troubles caused by its aircraft-engine business in 1971. Following the setback, two separate companies were formed, and today's car-making business is in no way affiliated with the aircraft-engine maker of the same name.

Rolls-Royce Motors was floated as a separate company, later taken over by Vickers, a defense and engineering contractor.

The two companies were well known to each other: the Merlin-engined Spitfire fighter plane was a product of Vickers Supermarine.

The late 1970s were Rolls heydays. The Silver Shadow was in demand, and annual production reached 3,350 units in both 1978 and 1979. Even after Vickers took over in 1980, annual production and sales remained at about 3,100.

The world's second oil-shock did not hit Rolls-Royce until mid-1982. At that time, Rolls management seriously misread the car market and orders vanished. The crisis became evident in autumn 1982, sparking employment reductions and senior management shakeouts.

Production was slashed, dropping below 2,500 units in 1982 and 1,600 in 1983, half the planned level. That fall there was a five-week strike, the company's first in 23 years, and the state of Rolls-Royce caused great concern among Vickers shareholders.

By lowering costs and sales aspirations, Rolls-Royce began to turn around. U.S. demand recovered, an important element for a company that exports half its volume there.

Another break with the past came in mid-1984 when Dick Perry took over as chief executive, following George Fenn's decision to retire early.

Production volume jumped to 2,200 in 1984. In the first four months of 1985 it was up 16 percent, suggesting a full-year total of 2,500. But company officials warn it will be 1990 before output of the late '70s and early '80s is reached again.

Vickers is more relaxed about the auto company these days, Rolls-Royce having contributed the greatest part to the group's financial rise last year.

In 1984 Rolls-Royce earned 14 million pounds ($19.5 million) on sales of 149 million pounds ($208 million).

Polish Fiat deal

Pol-Mot, Poland's state car group, and Fiat Auto have signed a $50 million pact involving modernization of the Fiat 126P model and factory. Pol-Mot's FSM factory produces the 126 for sale in Comecon countries and by Fiat's Western European sales network.

world news briefs

The Citroen BX station wagon is known as the Break in France.

Citroen breaks out

A station wagon version of the Citroen BX is now on sale in Europe. The true benefits of Citroen's unique Hydropneumatic suspension, which automatically adjusts ride stiffness in respose to loadings, comes into its own in the wagon — or Break — as it is known in France.

Brazil's sales slip

Auto industry sales in Brazil were off 8.3 percent at 302,600 the first half of this year. The drop is attributed to the 53-day strike by auto workers from April to June.

Chinese want Mercedes

China will assemble 1,000 of the old-style mid-range Mercedes-Benz, Daimler-Benz chairman Werner Breitschwerdt said at the West Germany firm's annual meeting. No further details were forthcoming, although Daimler-Benz is discussing truck deals with the Chinese.

Tractors for sale

French company Renault wants to sell its loss-making agricultural operations. Fiat group, for one, says it is not interested.

Finding the moment

Officials of Seat are confident Volkswagen will take a 51 percent share in the Spanish company. On the other hand, VW, including chairman Carl Hahn, says unresolved financial negotiations must be completed.

More Jaguars

Jaguar production rose 17 percent the first half of 1985 to a record 20,195 units. Full-year output in Britain is now expected to be about 38,000.

Sunshine supercar

Driver Peter Bauer poses with the Mercedes-Benz Alpha-Real which won the 230-mile rally for solar-powered vehicles in Switzerland at the end of June. The 44-mph vehicle, constructed by Daimler-Benz apprentices at Unterturkheim, is topped by a solar generator with 432 cells. Specifications include all-independent suspension, a tubular chassis, plastic body shell and all-disc braking.

Who will buy Matra?

Matra, the French electronics and auto-making group which is 51 percent government-owned, is reportedly seeking a buyer for its car operations. Among names mentioned are General Motors and Toyota. The Renault Espace minivan is made by Matra, although there is no financial link with Renault.

Improvements in Germany

West Germany's auto outlook is improved following setbacks after last year's strike and recent uncertainty over vehicle-emission levels. VDA, the country's manufacturers association, says employment has increased by 22,000 the past 12 months.

Name change

Volkswagenwerk AG, West Germany, will change its name to Volkswagen AG, following a vote at the company's annual meeting in West Berlin.

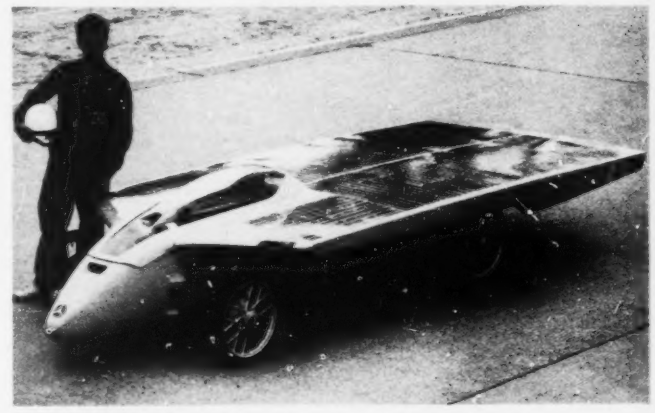
New Jaguar

A V12 version of the Jaguar XJS Cabriolet has been announced. Until now the British-made Cabriolet was available only with the six-cylinder AJ6.

4X4 forum

Britain's Institution of Mechancial Engineers is organizing an all-wheel-drive conference in London next March 5-6.

The BMW M3 cabriolet is destined for the U.S.



The Alpha-Real is topped by a solar generator with 432 cells.

Beefing up BMW

BMW will strengthen its 3-series lineup at September's Frankfurt auto show. Among the developments are a cabriolet (shown above), a diesel-powered version, a 325i to replace the 323i, and a sporty version known as M3. The M3 will be powered by a 200-hp four-cylinder engine derived from the Formula 1 powerplant. The cabriolet is destined for U.S. export, though no date has been set.

Fiat pulls out

Fiat has ceased truck manufacturing in Brazil. Fiat Caminhoes, a financial loss-maker the past five years, faced established competition in the heavy truck market from Daimler-Benz and Scania.

One million Sierras

Ford of Europe built its one millionth Sierra at Dagenham, England, July 9.

Trouble brewing

Hoover, which builds Sir Clive Sinclair's C5 electric vehicle at its South Wales factory, may sue Sir Clive over some $2 million worth of work already completed. The C5 has bombed, despite unprecedented publicity in the UK.

Iran contract resumes

Talbot, the United Kingdom arm of France's Peugeot group, will resume production of CKD kits for Iran in August. No kits have been shipped since last November because of payment delays. The vehicle involved is the Peykan, derived from the Hunter sedan and part of the Chrysler-Europe legacy.

Peugeot cash call

Peugeot group is making its first stock issue in more than 20 years. It is expected to raise more than $100 million, though major shareholders including Peugeot (34.5 percent), Michelin (9 percent) and Chrysler (15 percent) are not expected to subscribe.

Truck men confer

Bendix, Crane Fruehauf, Leyland Trucks and Renault Industrial Vehicles are joining the sponsor list at this year's European Transport Maintenance Council's annual conference in Strasbourg, December 1-4. Daf, Ford, Iveco, Volvo, Eaton, Bandag and Rockwell are sponsors.

Renault down

Renault's market share in France fell again in the first half of 1985 (30.0 percent from 31.8 percent), despite arrival of the new R5. The importers' share fell fractionally (to 34.7 percent), but Peugeot group increased from 33.2 to 35.3 percent. The Peugeot nameplate led the revival.

Besse

Continued from Page 37

felt ready to talk about his new job at Renault. And ready he was, commenting on the French auto industry, the American and Japanese industries — the companies, the people, the products — as easily as if he had spent a lifetime in the car business and knew all the moguls personally. His recovery (not plan) is reminiscent of what was successfully done at Fiat after 1980. That health cure was inspired by the Japanese.

Besse is comfortable with the Japanese, with whom he had good business relations previously. Japan was his best customer for nuclear waste treatment in La Hague.

Two months ago, Besse was in Japan to introduce his successor at Pechiney to some Japanese executives. He seized the opportunity to pay a visit to Nissan and Toyota. "We have friendly relations with Toyota," he says. Although Renault already buys some components from the Toyota group, Besse says there is no plan for any cooperation between the two in car components or manufacturing. But the Japanese business organization is interesting, he says, calling it "a true cultural revolution," and adding: "We'll have to do something in that department."

Besse reckons that by year 2000 the face of the car industry will be completely altered. There will be more cooperation, but it will be between healthy companies, he says. More joint-ventures will be made, involving components, between European manufacturers or with non-Europeans. "Why not with the Japanese?" he asks.

Besse has great admiration for the Japanese whom he knew when heading Cogema. He says that despite the communication problem, "We'll surely end up cooperating with them, but I don't know when."

He admits admiring General Motors, too: "Not only for the profit they made last year, but also for the kind of humility it takes from the world's number one auto maker to join with Toyota (in the NUMMI venture in the U.S.) and learn from the Japanese."

Besse has paid only one, quick visit to Detroit, for an American Motors board meeting, since he took over Renault. He doesn't speak English fluently.

Is he a workaholic? "I work too much," he confesses. He travels to his office behind the wheel of a new black Renault 5, arriving at 7:30 a.m. and leaving at 8 p.m. He takes files home to read at night, while glancing occasionally at the television screen. In the office, he dispatches countless brief notes to his staff, handwritten with a pencil and authenticated by a big stamp reading, "Georges Besse."

Not much is known about Besse's private life. He has an apartment in the center of Paris and a country house in the pastoral province of Touraine where he grows roses and spends weekends with his wife and five children (two boys and three girls). He is interested in a range of subjects including history, geography and architecture, from Gothic cathedrals in which he sees testimony of a formidable impetus of faith to the modern buildings of Niemeyer.

In an interview with Le Matin Magazine six years ago, Besse said, "A city like New York, where I wouldn't like to live, is beautiful."

While building the nuclear plants of Pierrelatte and Tricastin, Besse hired an architect so that the engineering job wouldn't look like a giant shoe box.

According to a profile published in Le Nouvel Observateur, his friends say, "This man is a builder."

Volkswagen

Continued from Page 37

most important European export market.

The UK added 4,300 to take VW to 49,400, while France added 5,300 to reach 46,600. Led by the Italian performance, these gains offset VW's decline in Germany. Overall, VW-Audi sales in Europe increased 3.5 percent compared with an industry decline of 1.8 percent.

The main element behind VW's success was Golf, now being built at a rate of 2,000 a day in Wolfsburg and 700 a day in Brussels. Demand for the model prompted VW to add 4,900 workers and extra shifts.

The series 2 Golf, launched in late-summer 1983, has always been in short supply, a situation heightened by last year's six-week metalworkers strike in Germany. This scenario contrasts with Golf sales in the U.S. where its reception has been lukewarm.

Pouring VWs and Audis into export markets, while German market prospects looked grim, has enabled the group to maintain high production levels. Carl Hahn, VW chairman, told shareholders in West Berlin that capacity likely will be fully utilized to the end of the year.

Last year's profitable VW operation (DM 228 million/$77 million) continued into the first six months of this year, Hahn said. The half-year figure was around DM 280 million/$95 million on revenue that rose 20 percent to DM 27 billion/$9.15 billion.

— Richard Feast

Report card

Continued from Page 38

has gone on record as saying he will quit if his group does not make a profit this year. BL of Britain and Italy's Alfa Romeo, both state-owned, are still in the red, but claim that things are getting better.

The contrast between the volume producers and the smaller-output "image" companies could not be more marked. They are all doing quite well in Europe as a whole, but there is little doubt that the key to their success is exporting cars to the U.S.

The VW group, including Audi, was the largest last year in terms of production and sales revenue. At more than $15 billion, it ranks as about the 10th largest group in any industry in Europe. Daimler-Benz was close behind, followed by Renault and Fiat.

The best net income was earned by Volvo group, followed by Fiat and Daimler-Benz. In relative terms, Jaguar's return was as good as any in the business.

The accompanying table, based on 1984 showings, provides a general impression of the health of European-based auto makers. It should be pointed out that the groups report at different times and in many currencies, so converting the results to dollars at a given time can only be a guide. The statistics refer to group operations rather than parent companies, except in the cases of Fiat and General Motors.

LOF part of joint venture

To produce auto glass in South Korea

TOKYO.—Three major sheet-glass makers from the U.S., Japan and South Korea are forming a joint venture in South Korea to produce glass for automobiles. Production is to start next year.

The new firm will involve LOF Glass, a unit of Libbey-Owens-Ford Co., Toledo; Nippon Sheet Glass Co., Osska, and Hankuk Glass Industry Co. (HGI), Seoul. The forming of the joint venture is subject to approval by each company's board of directors.

Production capacity of a new integrated plant to be built in a suburb of Seoul will be about 800,000 sets of automotive glass annually, according to LOF.

The joint venture will be capitalized at approximately $43 million, of which HGI will have 40 percent ownership, and LOF and Nippon Sheet Glass 30 percent each.

Observers here say the venture is in anticipation of an increase in South Korean auto production when the South Korean Government abolishes legislation on the type of vehicles produced by South Korean manufacturers in 1987.

Seven U.S., Japanese and South Korean auto makers already have plans to produce some 600,000 to 700,000 small cars in South Korea in the next few years.

Mazda Motor Co. recently announced that it will join Kia Industrial Co., of South Korea, to build a small car that will be marketed by Ford Motor Co. in the U.S. sometime in 1988.

Mitsubishi Motors Corp., Tokyo, and Hyundai Motor Co., of South Korea, which have been doing business for some time, recently announced another cooperative effort to build the redesigned Mitsubishi Debonair luxury car. General Motors and South Korea's Daewoo Motor Co. will start full-scale production of a small car in 1987.

Toyota drops

Exports to China

TOYOTA CITY, Japan.—Toyota Motor Corp. expects its exports to China, which have been on the decline since May, to continue at a subdued monthly rate of 1,000 units until at least next June.

Toyota's exports to China, mainly trucks, had been averaging 10,000 units a month since late last year. The January total amounted to 64,035 units, a 17-fold increase over the similar 1984 period.

Wisconsin attorney general slaps FTC-GM settlement

Continued from Page 17

kee reovered 79 percent, those in Dallas 52 percent.)

Another question will be why 17 percent of even the completed cases for the first 10 months of the program took more than 60 days to complete when the settlement agreement called for all settlements to be completed within 60 days of first contact.

A spokesperson for the FTC, noting that the allegations were nothing new, said the FTC intends to review its analysis carefully and that "we think our numbers are an understatement of what is actually happening in the field. We think our numbers are very impressive."

Dean Determan, head of the nationwide BBB arbitration program, said LaFollette was mistaken when he said the BBB was understaffed. "We are taking an average of 39 days to dispose of cases," he said. "Consumers are getting speedy responses.

"Nationwide we have 350 full-time people on this and at least 700 part-time.

"And contrary to Mr. LaFollette's assertions, we do have circuit riders to cover the outlying regions of his state," Determan added.

"There has been some legitimate criticism of this consent order, but tens of thousands of consumers are getting relief they never thought they would get," he said. "This order has had a much greater impact than expected."

Determan said also that Milwaukee and some of the other Northern states may have had higher complaint and settlement ratios because cars there operate in ice and snow conditions, conditions that are much harder on automatic transmissions.

In Detroit, a GM spokesman said the company continues to agree with the FTC that the program is an overall success.

"We did have some early problems in Wisconsin, but those were addressed by us and the BBB," he said. In any program of this magnitude, you can always point to some horror stories, but we maintain it is working very well overall."

Meanwhile, the Center for Auto Safety has issued a report on the GM-BBB arbitration program. Its author, Evan Johnson, concluded that it is "grossly inadequate" in addressing the losses consumers have suffered from failures of GM powertrain components.

According to Johnson, the program suffers from: A lack of notice to consumers, no national toll-free referral line, frequent delays in processing claims caused by completely inadequate BBB staffing and confusion within the BBB about the criteria to be used in accepting and handling claims.

He said there have been abuses by GM, mistakes and abuses by local BBBs and mistakes by BBB national headquarters. Finally, he criticized what he called the FTC's "complete cave-in" to GM on the issue of when the 60-day clock begins to run on the settlement limit.

Capitol Hill sources indicate that Rep. James Florio, New Jersey Democrat and chairman of the House subcommittee that has oversight responsibility for the FTC, may be the next to look into the controversy surrounding the settlement.

Court slaps parts franchisor after complaint by FTC

By Jake Kelderman
Washington Reporter

WASHINGTON.—Royco Automobile Parts, Inc., an auto tuneup parts franchise operation based in Jacksonville, Fla., and its president, Robert W. Sowerby, have been ordered to pay $567,000 in consumer redress and another $400,000 in civil penalties for misrepresenting facts and making false claims about the earnings potential of the franchise.

The U.S. District Court for the Middle District of Florida handed down the order in the wake of charges brought against the firm by the FTC in 1983 and the subsequent filing of a suit by the Justice Department.

In February, 1984, the court granted a peliminary injunction in the case, freezing the firm's assets.

According to the FTC, persons who invested in Royco Automobile Parts franchises lost an average of $14,000 each—some lost more than $50,000—because of false promises by the company and its president.

The FTC said Royco had promised that investors could receive a return on their investment of as much as 300 percent annually and that there was no risk because the company would reimburse unsuccessful distributors.

But, the FTC said, few if any buyers obtained such returns and many lost all they had invested because the company refused to make the promised reimbursements.

In newspaper ads throughout the country, Royco had promised earnings of as high as $150,000 per year full-time or $50,000 per year part-time from a $14,000 inventory investment.

The FTC said the firm also paid individuals to pose as successful Royco franchisees when, in fact, they were either not Royco franchisees or were not succesful.

The court order requires Royco to provide a list of all former and present Royco franchisees, including addresses and phone numbers, and an accounting of all assets Royco now holds or has transferred or sold since Jan. 1, 1983.

The order permanently bars Royco from making any specific claims about its franchise unless the company can substantiate the claims.

It also requires Royco, Sowerby and anyone in business with them to post a bond of at least $500,000 to cover any violations of the permanent injunction or losses by purchasers if they sell business ventures or franchises in the future.

Sowerby is no longer selling franchises through the corporate name Royco.

The FTC said that any buyers of Royco franchises who believe they may be entitled to compensation should send their names and addresses to Barbara Schanker, FTC Atlanta Regional Office, 1718 Peachtree St. N.W., Atlanta, Ga., 30367.

Austin Rover Cars begins dealer selection process

MIAMI.—Austin Rover Cars of North America is traveling to dealerships throughout the country this month to select approximately 100 to sell its new "executive automobile," codenamed Project XX, which it will bring here in the 1987 model year.

"Austin Rover Cars has designed this phase of its dealer selection process to provide the most thorough and equitable dealer application review possible," said Raymond Ketchledge, president.

Dealer applicants will be interviewed at their places of business, he said. The interviews will begin in the West and Southwest, followed in rapid succession by other markets.

The dealer selection trips will be directed by John E. Connelly, general sales manager. They are expected to be completed in late September when letters of intent will begin to be issued to selected dealers.

Ketchledge said Austin Rover Cars has received more than 425 dealer applications, or more than four applications for every available dealership. Austin Rover Cars had to go into a second printing of its dealer application kit to accommodate requests.

Charlesworth named

ATLANTA.—Jack G. Charlesworth has been named to the newly created position of director of fleet program development for Manheim Auctions, Inc.

Signing to succeed his father

115 outlets lost; midyear count is 20,787

U.S. dealer total dips in first half

Continued from Page 1

the light of the not-too-distant past.

In 1980, when the recession was wrapping its tentacles around the auto industry, 930 domestic dealerships faded away in the first half. The decimation was reduced to 325 in 1981, but it climbed back to 556 in 1982.

Then came a slip of only 76 in 1983 (which was countered by a fine second half) and a gain of 54 last year.

Going back a bit farther, 1979 (which was a mighty good year for domestic cars) saw a loss of 133 dealerships in the first half. And in 1978 (which was even better for sales), the dip was 79.

In franchise totals, five makes were up for the first half; seven were down, and two were unchanged.

All three Chrysler Corp. makes were on the plus side. Dodge added 18 outlets; Plymouth, 16, and Chrysler, 15.

Ford Motor Co. had two out of three in the black. Lincoln and Mercury added 16 franchises apiece, and Ford was down 24.

At GM, Cadillac and Oldsmobile were unchanged for the half, and there were dips of 20 for Chevrolet, 10 for Buick and five for Pontiac.

AMC had 17 fewer franchises than on Jan. 1; Renault was off 16, and Volkswagen was down 15.

Chrysler Corp. opened 1985 with 3,988 car dealers. It added one in the first quarter and five in the second for a midyear total of 3,994.

The gains weren't as impressive as last year's quarterly hikes of 30 and 61, but Chrysler was the only domestic maker to increase its dealer body this year. The company's total has risen for 11 consecutive quarters, a period that has added 365 outlets to the company's ranks.

At midyear, Chrysler was just a step away from 4,000, a total it has not achieved since the second quarter of 1980.

Franchise figures on July 1 were Chrysler, 3,038; Plymouth, 2,996, and Dodge, 2,911.

In addition to its 3,994 car dealerships, Chrysler has five that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

Ford Motor Co. was steady in the first half with a dip of 11 outlets in the first quarter and nine in the second. The company had 5,544 car dealerships on July 1, down from 5,564 on Jan. 1.

This year's quarterly dips compared with increases of seven and four locations in the first half of 1984.

The midyear franchise totals were Ford, 4,708; Mercury, 2,754, and Lincoln, 1,594. Lincoln is edging ever closer to Cadillac, which has 1,610.

Ford Motor Co. has 115 dealerships that handle only Ford heavy-duty trucks. They are not included in the company's car-dealership total or in Ford Division's car-franchise total.

At GM, the July 1 car-outlet figure was 9,910, down from 9,965 at the beginning of this year. There were dips of 20 in the first quarter and 35 in the second. In 1984, GM was down 10 in each of the first two quarters.

Midyear franchise counts were Chevrolet, 5,100; Oldsmobile, 3,200; Pontiac, 3,005; Buick, 2,965, and Cadillac, 1,610.

AMC-Renault had 1,439 car dealerships on July 1, a slip of 26 from 1,465 as the year began. There were quarterly dips of 3 and 23. A year ago, the total declined 15 in the first quarter and 13 in the second.

Franchise totals on July 1 were AMC, 1,380; Renault, 1,325.

Of the 1,439 dealerships, 1,266 handle both AMC and Renault cars. There are 739 AMC duals with Big Three makes of cars, and Renault is involved in 90 percent of them. Half of the 70 AMC-Volkswagen stores also have Renault.

Volkswagen opened the year with 899 dealerships and slipped to 884 on July 1. The total was down five in the first quarter and 10 in the second. Last year, the quarterly drops were six and four.

VW has an estimated 150 duals with the Big Three and/or AMC, about the same as at the beginning of this year.

The latest count of 20,787 domestic-car dealerships is down 108 from the 20,895 doing business on July 1, 1984. Chrysler and Ford are up; GM, AMC-Renault and VW are down.

The year-to-year comparison shows gains of 39 outlets for Chrysler and 25 for Ford. There were declines of 110 for GM, 59 for AMC-Renault and 12 for VW. A change in the number of intercorporate duals resulted in a net dip of 108 for the domestic industry.

Park-to-Reverse hassle is still active

Steed called negligent in Ford case

Continued from Page 2

had product liability claims of $1.6 billion from alleged Park-to-Reverse accidents.

After the Wirth hearing, Helen O. Petrauskas, Ford environmental and safety engineering vice president, gave her reading of events: "The facts presented at today's hearing affirmed the correctness of NHTSA's decision not to reopen this investigation.

"The testimony again supported the conclusion that NHTSA has thoroughly investigated, that no mechanical defect exists in Ford automatic transmissions and that driverless vehicle accidents can and do occur with all makes of cars and light trucks."

The current brouhaha occurs because a still incomplete report by GAO found that instead of the death rate decreasing after Ford's warning letters and labels to owners—as NHTSA has claimed—it rose except for the period shortly after the warning.

Moreover, NHTSA's reliance on "incidences data" (which is wellnigh unverifiable) instead of use of fatality data (which has third-party evidence and is considered to be of much better quality) raises questions about NHTSA's denial of the CAS petition—questions that are still expected to be raised in court.

The GAO investigators are about two to three months away from finishing their job. Their task has been complicated because two congressmen with opposing viewpoints have asked for the investigation.

One is Wirth, who owns one of the Ford vehicles and who thinks they are unsafe in that one area. He has asked for answers on NHTSA's use of statistics, its monitoring of the unique Ford settlement agreement and NHTSA's efforts to inform the public of the potential danger.

The other lawmaker is Rep. John Dingell, Michigan Democrat and chairman of the full committee on which Wirth serves. Dingell seems to agree with Ford and Steed that there is no problem with Ford vehicles that does not also occur with other cars, and he is raising legal issues which GAO has not yet addressed.

Wirth wanted to hold his hearing; Dingell noted that the GAO report is not complete and he will be asking more questions, both of GAO and of NHTSA.

Against that backdrop, J. Dexter Peach, a GAO director, reported to Wirth on several aspects of NHTSA performance.

He said NHTSA monitored the agreement by continuing to collect data, but mostly at the urging of the Center for Auto Safety and of the Wirth subcommittee. It did not look at whether the Ford labels (telling drivers to push the shift lever into Park, etc.) were attached since it thought the letters to owners were more important.

GAO also said that NHTSA's reliance on the less-verifiable "incident and accident data" caused it to find a decline in both the number and rate of Ford incidences and accidents. GAO thinks such data is needed to indicate a problem but that it is not good enough to use for conclusions.

Fatality data is much better, GAO said, and it shows that the rate of deaths for the Ford Park-to-Reverse incidents declined in 1981—the first year after letters/labels—but increased every year thereafter. It's the rate which takes into account the number of such vehicles left on the road that is important—not the raw numbers, GAO said.

Meanwhile, GAO said, NHTSA has stopped using its own data base and, after requesting one from Ford, has used the Ford data.

According to GAO, "NHTSA accepted the Ford data as being the most comprehensive available and used these statistics as the principal information to conclude that the absolute number and the rates of reported incidents and accidents have declined in every calendar year since the December, 1980, settlement."

Although GAO refused to make specific recommendations or to criticize NHTSA performance, it nonetheless made its differences known.

In contrast with NHTSA statements of two years ago—"only" 26 deaths attributed to Ford Park-to-Reverse incidents since the settlement and a significant decline in the death rate—GAO found: "As of June, 1985, this data base consists of a total of 446 reports of fatalities that involve Ford vehicle model years 1960-84. Of these 446 fatality reports, 336 involve 1970-79 Ford vehicles.

"The 336 figure includes 110 fatalities reported before the Dec. 30, 1980, settlement agreement and 226 reported after the agreement. Of the fatalities reported after the agreement, 88 occurred before and 139 occurred after the agreement."

Steed insisted that what she told Wirth was true at the time. It was how the data was cut and read. On a per-day incident basis, she said, it is still true—with more data in—that the fatality rate per day pre-settlement is higher than post-settlement. It's not the 300 percent she reported two years ago, but it is 194 percent higher.

The point Wirth makes, however, is that though the deaths may be down, so are the number of large Ford vehicles of those model years left on the road and the death rate was way up in calendar 1984.

NHTSA contended last month and still contends that the rate of accidents/injuries is approximately the same pre-1980 and post 1980—that is, after the design of the gear detente was changed.

But the NHTSA staff report of two weeks ago found fatalities from Park-to-Reverse incidents disproportionately high for Fords compared with non-Fords.

GAO now says that if it were NHTSA, it would consider getting more information to drivers in view of the higher fatality rates and it would think twice about using again such a settlement in view of its limited effectiveness.

GAO added also that in view of the eight-year statute of limitations in the safety law, NHTSA should move quickly if it plans to reach a final determination of defect.

Obviously, NHTSA has no such plans, but the story is not yet over as more congressional hearings and more court action are probably in the works.

New Ford sports model possible, Poling says

Continued from Page 2

design engineering outfits—or be actively involved.

Company insiders have said SVO has been busy in recent months laying the groundwork for a possible all-new sports-car venture.

The planning has reportedly taken precedence over new SVO adaptations of existing production cars—such as the Thunderbird and new front-wheel-drive models—which are reportedly well-defined and lacking only a corporate green light.

When asked whether an SVO Thunderbird or other special performance versions are coming from the group, Poling said, "I think they are making contributions consistently on all our products in terms of the performance aspects.

"But," he added, "if you're talking about a major contribution in terms of a vehicle, I would sort of like to concentrate on a sports car."

The Maya, a concept car built at Giugiaro's ItalDesign studios in Turin, is powered by a Ford 3.0-liter V-6 engine and was displayed earlier this year at the Geneva Auto Show. The car was lent to Ford recently and a photograph of the vehicle, under the heading "What A Car!," turned up in a recent edition of the company's Ford World employe publication.

There has been speculation that the Maya may become Ford's entry in the luxury two-seater wars expected to heat up among the domestics later in the decade. Poling acknowledged a fondness for the front-wheel-drive coupe, but would say little else about the car.

"I'd rather not talk about future plans," he said. "I think we've got a lot of exciting things right now."

Two weeks ahead of last year

'85 car production tops 5 million

By Louise Kertesz
Detroit Reporter

U.S. auto production for 1985 passed the five-million mark last Tuesday (July 30), two weeks ahead of last year.

Year-to-date, 5,075,861 cars have been assembled, 4.59 percent more than the 4,853,027 built last year at this point.

With more plants down for model changeover, last week's scheduled production of 133,095 cars was down 14.12 percent from the previous week's 154,974.

Last week's targeted output was 20.88 percent more than the year-ago week's 110,104.

The manufacturers shared last week's scheduled production as follows: General Motors, 60.83 percent; Ford Motor Co., 24.55 percent; Chrysler Corp., 6.46 percent; Honda of America Mfg. Co., 2.37 percent; American Motors, 2.07 percent; Volkswagen of America, 1.41 percent; New United Motor Mfg. Co., 1.35 percent, and Nissan Motor Mfg. Co., U.S.A., 0.96 percent.

Chrysler's Jefferson (Detroit) plant is scheduled to start production of 1986 models today (Aug. 5) after being down for two weeks for changeover.

The company's Belvidere (Ill.) plant is down for model changeover this week, with production set to resume Aug. 12.

Chrysler's St. Louis Plant No. 2 is also down this week, for a combination of vacation and model changeover. It is scheduled to reopen Aug. 19.

Chrysler's Sterling Heights (Mich.) and Newark (Del.) plants remain closed this week for changeover. They are due to reopen Aug. 19.

The company's St. Louis No. 1 plant remains closed for changeover until Aug. 12.

Ford's Lorain (O.) and Dearborn plants are due to begin production of 1986 models today.

GM's Leeds (Mo.) plant, which was closed for a week for model changeover, is scheduled to resume production today.

The company's plants in Van Nuys, Calif., and Norwood, O., are closed this week for model changeover. They are due to reopen Aug. 12.

Ford plants slated for daily overtime this week are: Chicago; Dearborn; Edison, N.J.; Kansas City; Wayne, Mich., and Wixom, Mich.

The company's Chicago plant is scheduled to work overtime Saturday (Aug. 10).

IRS issues tax guidelines for use of company cars

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—New, less-stringent, guidelines for the reporting and withholding of taxes on employes' personal use of company-owned cars, and other fringe benefits, have been proposed by the IRS.

The new rules replace the "contemporaneous" record-keeping requirements issued last winter by the IRS. Those rules were overturned this spring by congressional action.

Until IRS issues final rules, the proposed rules will be treated as being in force. Final rules will not have a retroactive effect however, so taxpayers will not be subject to penalties if the rules are changed in the future.

Under the new guidelines, employers may choose to withhold tax for the personal use of business vehicles for some employes, all employes or no employes.

If employers decide not to withhold taxes for personal vehicle use, employes are allowed to increase the amount of income tax withheld by filing a new W-4 form. However, if an employe has too little withheld, he or she may make estimated tax payments in order to avoid penalties for underpayment.

Employers must notify employes of a decision not to withhold by Sept. 1, 1985.

Employers who decide to withhold for the use of company cars may withhold at any time during the year in which the vehicle is provided. That allows for the flexibility of withholding money from paychecks on a per-pay-period or quarterly basis.

Although the value of the fringe benefit must be reported to IRS, the tax agency has decided that employers do not have to notify the IRS how they withhold the tax or determine the date on which the benefit is paid to the worker.

However, if the IRS determines that the value of the fringe benefit is underestimated, the employer may be subject to penalties for failure to deposit fully.

The value of fringe benefits provided during a calendar year must be calculated and reported by Jan. 31 of the following year. By the same date, employes must be given a W-2 form reflecting that valuation.

Truck production climbs above 2 million for '85

Domestic truck manufacturers built this year's two-millionth truck last Tuesday (July 30), three weeks ahead of 1984.

So far this year, 2,051,573 trucks have been assembled, 9.78 percent more than the 1,868,798 completed last year at this time.

The makers expected to assemble 63,716 units last week, 6.90 percent fewer than the previous week's 68,439, but 19.68 percent more than the year-ago week's 53,238.

Chrysler's Warren (Mich.) plant is scheduled to reopen today (Aug. 5) after being closed for a week for model changeover.

General Motors' Lordstown (O.) plant is closed to repair damage caused by a fire in the paint system on July 26. The plant will not resume production until after Labor Day, according to a company spokesman.

GM's Pontiac Plant No. 5 was slated for two overtime shifts Saturday (Aug. 3).

Ford Motor Co. has scheduled daily overtime this week at the following plants: Lorain, O.; Twin Cities; Wayne, Mich., and Norfolk.

Canadian trucks hit bottom with Chrysler down

With Chrysler Corp. plants closed for vacation and changeover for the past two weeks, truck production in Canada fell to its lowest point this year.

Last week's estimated truck build of 8,292 units was about the same as (down 0.42 percent) the previous week's 8,327.

Year-to-date, 515,153 trucks have been built, 6.37 percent more than the 484,323 completed last year at this point.

Chrysler plants are scheduled to reopen today (Aug. 5).

Canadian auto makers scheduled assembly of 15,580 units last week, 21.03 percent fewer than the previous week's 19,730, and about the same (up 1.23 percent) as the year-ago week's 15,390.

So far this year, 620,637 cars have been assembled, 6.35 percent fewer than the 662,686 completed last year at this point.

General Motors' Oshawa (Ont.) plant closed last week for vacation and changeover. It is scheduled to resume production Aug. 12.

American Motors' Brampton (Ont.) plant is due to resume operations today after being closed since June 24 for vacation and changeover.

Soft sales, hauler strike boost stocks to 65 days

By Kathleen Hamilton
Assistant Managing Editor

August opened with a 65-day supply of new domestic cars in dealer and factory hands, the highest level in nearly 2½ years.

Some of the oversupply could be blamed on the Teamsters' strike against the car-hauling companies, but not much. The strike was on only one week of July, and sales didn't go soft in that week alone. They were down throughout the month.

No doubt the strike and threat of strike kept cost-conscious buyers at bay, knowing they could get better prices later, when dealers are overstocked.

Some of the oversupply could be attributed to dealers stockpiling in anticipation of the strike and factory downtime for model changeover. But again, not much, because Aug. 1 inventories usually decline as factories shut down and offer cleanup incentives.

This time, the domestic stockpile of 1,579,595 was up a hair from the July 1 stockpile of 1,576,762. The Aug. 1 supply wasn't so large—just a three-month record. Slow sales made it look large.

On July 1, the similar (July 1) stockpile would have sold in 58 days. At current sales rates, it will take 65 days to get rid of the Aug. 1 inventory.

The last time there was a 65-day supply of cars was on Feb. 1; the last time the days-supply figure was higher was on March 1, 1983, when it was 68.

For comparison, on Aug. 1, 1984, there were 1,297,864 cars in stock, a 47-day supply.

Although a 50-day supply is considered ideal, 65 days isn't far off base—especially since it means that most of those units were in dealer hands before the transporters' strike began. About 10 days' worth of cars are usually in transit at any given moment, so dealers in many parts of the country have the option of picking up their cars at railroad yards close to home.

• A Ford Motor Co. spokesperson said such deliveries have numbered as many as 1,000 on some days during the strike.

With downtime, incentives and the strike, some funny-looking days-supply numbers emerged this month. Mostly, the increases were due to slower sales, especially at Buick. American Motors, on the other hand, sliced its Alliance stockpile mostly by increasing sales sharply.

General Motors, Chrysler Corp., and Nissan increased their domestic-car stockpiles compared with July 1; the rest of the domestic auto makers trimmed theirs.

Domestic inventories were split this way on Aug. 1: GM, 56.49 percent; Ford, 21.14 percent; Chrysler, 18.32 percent; American Motors, 2.54 percent; VW, 1.05 percent; Honda, 0.24 percent, and Nissan, 0.22 percent.

One month earlier, the split was GM, 52.68 percent; Ford, 25.28 percent; Chrysler, 17.76 percent;

Examining the Excel

Hidden Image

Hyundai model set for '86 U.S. debut

Hyundai's new Pony Excel subcompact is undergoing tests in the U.S. before the car's debut here in early 1986. The front-wheel-drive Excel is pictured with wiring used for hot weather testing. The Excel will have a 1.5-liter engine and 4-speed manual transmission as standard equipment. The engine and running gear are from Mitsubishi and styling is by ItalDesign. Hyundai plans to sell 100,000 cars here next year.

Transport talks halt; cars, trucks stranded

By Richard Johnson
Detroit Reporter

The nation's auto dealers watched inventories dwindle last week while new cars and trucks stranded by the two-week-old nationwide haulers strike continued to pile up in factory storage yards, railheads and ports.

Production schedules remained unaffected by the strike as of late last week.

Bargainers for the more than 20,000 Teamsters-represented new-car haulers and the National Automobile Transporters Labor Division resumed talks last Wednesday (Aug. 7) for the first time since the walkout began on July 25. But negotiations broke off with the two sides making "no progress," according to a spokesman for the management association.

Bargaining is set to resume Tuesday (Aug. 13) in Washington. The auto haulers and a bargaining unit representing the transporter industry remain at odds over working conditions and economic issues.

Most domestic dealers carried sufficient stock late last week, although supplies were falling fast and many retailers weren't expecting inventory to hold out much longer.

Meanwhile, import franchiseholders, especially those handling Japanese cars, were in dire straits by the end of the week.

"Our dealers don't have any cars," said a spokesman for American Honda. "They're toughing it out."

Some dealers were driving cars away from distribution centers,

More Audi autonomy in VW restructuring

By Michelle Krebs
Financial Editor

TROY, Mich.—Volkswagen of America, Inc., has confirmed that it will restructure its management to further split Volkswagen and Audi, giving each more independence.

Audi will remain an operating division of Volkwagen of America. However, it will do business as Audi of America, Inc.

Volkswagen will do business as Volkswagen United States, Inc.

Peter Fischer and James Fuller will continue to head Audi and Volkswagen, respectively. They will retain their vice president titles.

In addition, Peter Weiher, VWoA executive vice president of sales and marketing, will return to Germany and his position here will be eliminated.

A number of corporate responsibilities will be split between the two divisions, most notably the service operation.

Audi and Volkswagen will have separate service divisions under the new plan. Otto Sonnenschmidt will head the Volkswagen service department, reporting directly to Fuller. Kurt Bauer will head the Audi service division, reporting directly to Fischer.

Sonnenschmidt now is VWoA general service manager, and Bauer is VWoA manager of technical services.

A memo to employes said the details of the plan and timing will be finalized in upcoming weeks and is to be implemented by the fourth quarter of this year.

The corporate parts division will continue as it has with Ulrich Fahrun, vice president, reporting directly to VWoA President Noel Phillips.

Controller functions will be es-

Nissan to send diesels to Spanish firm

TOKYO.—Nissan Diesel Motor Co. will export 500 diesels of the 6,925-cc, 170-HP FE engine family annually to Motor Iberica, of Spain, beginning this year. The shipments to Motor Iberica, a subsidiary of Nissan Motor Co., will increase to 1,000 units annually in a few years.

2,500 Nissan vehicles on burning ship

WASHINGTON.—Nissan officials are assessing damage to vehicles aboard a ship that caught fire last week en route from Yokohama to Los Angeles. The Coral Ace was carrying 800 light trucks and 1,700 Sentras and Maximas for California.

Honda signs deal in India

NEW DELHI, India.—Tata Engineering and Locomotive Co. has agreed with Honda Motor Co. to manufacture cars in India. Tata, India's largest vehicle maker, previously built only trucks. Production of Hondas is expected to begin in 1987 at 10,000 cars a year, rising to 40,000 in five years. Honda is expected to buy a 10-percent interest in Tata.

Joint venture, perhaps to build trucks, is discussed

Ford explores deal with China

By Richard Johnson
Detroit Reporter

Ford Motor Co. is conducting "exploratory talks" with representatives of the Chinese Government about a joint manufacturing venture in China, possibly for production of light trucks.

A Ford spokesman in Dearborn last week confirmed discussions with the Chinese following word from the Peoples' Republic's official Xinhua News Agency that a company vice president met with a top government official early last week.

Xinhua reported that Lindsay Halstead, Ford vice president for Asia Pacific and Latin American Automotive Affairs, visited the country at the invitation of China National Automotive Industry Corp. and consulted with Vice Premier Wan Li.

"We are having discussions with representatives of the Peoples' Republic of China with an eye toward participating in the development of the auto industry in China," the Ford spokesman said.

According to dispatches from Beijing last week, Halstead denied Xinhua's report that a joint venture had reached the planning stages.

"We are talking in general terms about potential ventures," Halstead said. "The talks have not gone beyond that stage."

He added that Ford is trying to get 'background on the Chinese Government's thinking" on the subject of cooperative ventures.

Halstead was also quoted as saying he was on "a very quick exploratory" visit and that there was no time frame for a possible agreement with the Chinese. He also said he "couldn't even imagine a dollar figure" for a venture.

Halstead did say the Chinese were interested in building trucks and that he had invited them to visit Ford operations in Dearborn.

"We have had some discussions for some time," said the Ford representative in Dearborn. Asked what vehicle a joint venture might produce, he said, "There is some thought that it might be light trucks, but there is no program yet, nothing concrete, just exploratory talks."

The spokesman said he didn't know Halstead's itinerary, or how long he planned to remain in China.

Xinhua reported that the proposed joint venture company would turn out "light vehicles" in cooperation with China's second

Rinspeed Design adds to Porsche 911 Turbo

Swiss car customizer Rinspeed Design, of Zurich, has introduced the Rinspeed Porsche 969 Turbo. Rinspeed Design's additions to a Porsche 911 Turbo include a small front wing, extended air ducts, wide side skirts, elevated rear end, rear spoiler and rooftop spoiler.

$49-over dealer takes on GM in court; results are mixed

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The Minnesota General Motors dealer who tried unsuccessfully the $49-over-dealer-invoice selling method has won some and lost some in Minnesota Federal District Court.

John Peterson Motors, Inc. (JPM), of Lake City, Minn., and Donald John Peterson, its president, sued GM and GMAC, charging in part that they conspired to drive the dealership out of business, one way or another, in order to stop the "$49-over" method of selling cars.

The dealership handled all five makes of GM cars. The dealership is not now in operation, according to a Chevrolet zone official.

GM and GMAC moved to convert JPM's October, 1984, voluntary petition in bankruptcy court to a Chapter 7 liquidation proceeding, and the court granted it.

Once, JPM was a conventional dealership selling cars to retail customers at a negotiated price. But early in 1983, JPM started its "$49-over" idea—disclosing the factory invoice to the buyer and adding $49.

After JPM declared voluntary bankruptcy, that court appointed an examiner and found an unsatisfactory state of affairs in the dealership—fraud or dishonesty or incompetence or gross mismanagement.

GMAC, which expects to be paid within about 24 hours after the sale of vehicles on which it provides wholesale financing, moved to make the bankruptcy a Chapter 7 type in federal court.

The JPM and Peterson suit is extremely broad. Count 1 against GM, GMAC, various local GM dealers, local and national dealer associations and General Electric Credit Auto Lease Corp. (GECAL) charges conspiracy under the Sherman Antitrust Act to force JPM to stop its "$49-over" program and to force JPM out of business by cutting off financing and taking other steps.

Count 2, under the Robinson-Patman Act, charges GM with discriminatory treatment in "preferencing" and delivery of new vehicles.

Count 3 charges coercion under the Dealer Day in Court Act.

Count 4 brings similar charges under the Racketeer Influence and Corrupt Organizations Act.

Count 4 makes similar claims of conspiracy under the 1971 Minnesota antitrust law.

Count 5 makes claims under the Minnesota Motor Vehicle Sale and Distribution Act.

Peterson claims his personal and business reputation was damaged as was his ability to get credit. His assets and his stock and his real estate values were affected and he suffered mental pain and anguish, he says.

Judge Diana Murphy has granted some of the GM-GMAC motions and denied others.

She denied a GM move for summary judgment and a request for a more definite statement. She granted a GM move to dismiss Counts 2 and 4 for failure to state a claim, but she did not agree to dismiss counts 1, 3, 5 and 6.

Judge Murphy also denied JPM's move for a preliminary injunction.

In count 1, Judge Murphy will allow the federal conspiracy charges under the Sherman Act, including GM and GMAC along with GECAL, to go forward. But no date for discovery has been set.

Similarly, conspiracy charges under the Minnesota statute will also go forward.

But the judge rejected the Robinson-Patman charges on grounds that a number of courts have held that the section used by JPM does not apply to "initial allocation" of products not yet delivered.

Judge Murphy threw out the count under the Racketeering Act on grounds that GM/GMAC did not have a "pattern of racketeering activity."

GMAC did get a security interest against JPM and Peterson, but this was while JPM was a conventional dealer and long before JPM charged GMAC with illegal acts. While GMAC acquired another security interest in 1984, the judge ruled, this was not enough of a "pattern."

Moreover, Judge Murphy said, JPM cannot claim relief under another section of the Racketeering Act since GM neither "controlled or conducted the common, everyday affairs of JPM" nor did it use the "service and facilities of JPM . . . regularly or repeatedly . . ."

But in Counts 1 and 5, Judge Murphy ruled that Peterson had standing to sue since he is the president, sole director and sole shareholder of JPM and he has given security interests in his personal assets.

Judge Murphy explained: "Under these circumstances where the corporation apparently has been treated as an alter-ego and where it may not survive bankruptcy proceedings, the potential for duplicative recovery or complex apportionment of damages is minimal."

The alleged injuries, the opinion continued, flow directly from the antitrust charges claimed.

"As competitors of other GM dealers, plaintiffs' alleged damages are due to the cutoff of supply and the other alleged activities designed to force them to abandon their '$49-over' plan or entire business," the judge said.

Using similar reasoning, Judge

GM, UAW downplay attack on Saturn pact

By Michelle Krebs
Financial Editor

General Motors and the UAW said last week that charges by an anti-union lobby group that their Saturn contract is illegal are "without merit."

The National Right-to-Work Legal Defense Foundation, the legal arm of the National Right-to-Work Committee, asked the National Labor Relations Board in Detroit to decide if GM's recognition of the UAW as the bargaining unit for Saturn workers is legal.

Since the Saturn workers have yet to be chosen, the group claimed that the contract is in violation of federal law, which allows workers to choose whether they want to be members of a union.

The majority of the initial 6,000 Saturn workers at the plant in Tennessee, which is a right-to-work state, are to come from UAW ranks, both employed and unemployed.

Edmund Dilworth, GM assistant general counsel and general counsel to Saturn Corp., said: "In our view, we have done nothing illegal, and we intend to defend our position before the NLRB."

In a joint statement, UAW President Owen Bieber and UAW Vice President Donald F. Ephlin, director of the union's GM department, said the charges came as no surprise.

"While we have not had an opportunity to study the charge by the so-called 'Right-to-Work' group, it is not unexpected, and we believe it is totally without merit," they said.

"Our agreement with Saturn Corp. will provide that innovative project with the knowledgeable, experienced workforce it needs to succeed, and it will also give thousands of laid-off GM workers the opportunity to return to a job," they said.

The NLRB will appoint a board lawyer to investigate the charges and report to the Detroit regional director. If the charges are found to have merit, the NLRB will issue a complaint in 30 to 45 days.

The entire process could end up before an NLRB administrative law judge who would try the case. The judge's decision could be appealed to the full NLRB in Washington and could eventually end up in the courts.

Detroit's help for Avanti move placed on 'hold'

DETROIT.—Funding help through the City of Detroit for Avanti Motor Corp. has been shelved again.

The Detroit Common Council had rejected, then reconsidered and approved, applying for a $2 million Urban Development Action Grant to help the specialty car company move to Detroit from South Bend.

However, a letter from the Detroit Department of Housing and Urban Development to the city said that since the reconsideration by the Council came after the application deadline, the application had to be returned without review.

The application apparently can be resubmitted if the deadline is waived.

Avanti is operating under Chapter 11, which provides for protection from creditors while the company reorganizes under the supervision of the U.S.Bankruptcy Court.

How to telephone the White House

Ever wanted to give President Reagan a piece of your mind?

The White House telephone number is (202) 456-7639. This won't get the President on the phone, but it is a direct line to the White House staff, and your message will get through.

Japanese makers send parts buyers to U.S.

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—At the request of the Ministry of International Trade and Industry, the Japan Automobile Manufacturers Assn. will send an automobile parts purchasing mission to the U.S.

The visit, according to JAMA, will coincide with the Automotive Parts and Accessories Assn. show in Chicago Aug. 26-28.

A JAMA spokesman said the mission would be made up of purchasing executives from automobile manufacturers, parts manufacturers, parts distributors and trading firms that import parts for the Japanese aftermarket.

The last time JAMA sent a buying mission to the U.S. was in 1980 when Japanese automotive exports became a target, as they are now, because of the huge U.S. trade deficit.

The JAMA spokesman said members of the mission will concentrate on auto components that they feel association members would be interested in importing.

Because the value of Japan's auto parts imports is still far less than the value of its exports of vehicles to the U.S. and since that is a major contributor to the trade deficit, there has been a mushrooming movement within the U.S. for Japan to increase auto parts imports.

A large delegation of APAA members is planning to visit Japan to conduct a parts-sales promotion at the Tokyo Motor Show Oct. 30-Nov. 11.

AC Spark Plug and Delco Remy divisions of General Motors are going to exhibit at the motor show for the first time in an effort to attract sales orders from Japanese automotive firms.

Firestone-equipped Nova

A Chevrolet Nova, produced by New United Motor Mfg., Inc., was part of a display at Firestone Tire & Rubber Co.'s headquarters in Akron. Looking over the new model are, from left: Arthur W. Stuart, Firestone's coordinator of offshore tire accounts; Thomas J. Reese, vice president for original equipment tire sales, and George W. Aucott, president of Firestone's world tire group. Firestone is supplying tires for half the Novas, which are produced in Fremont, Calif.

But sales of domestics slip from year-earlier levels

Imports surge to record month

By Jenny L. King
Detroit Reporter

New-car sales in July were nothing short of spectacular for the imports—they amassed their highest one-month total in history. But domestics were down from strong 1984 levels.

Record import sales translated into 29.52 percent of the month's market which, while not a record, was up more than six percentage points from the 23.15 percent earned a year earlier, and up from 26.87 percent in June.

The loosening of restrictions on Japanese imports earlier this year bolstered midsummer inventories. Another factor: A year ago, the numbers of cars coming from Germany was severely affected by the Metalworkers' strike which paralyzed production for several weeks.

Industrywide sales in the U.S. totaled 898,925 in July, up 1.17 percent from 889,947 the preceding year. Domestic sales of 633,527 were down 7.39 percent from a robust 684,112 in 1984. Import numbers soared to an any-month high of 265,398, up 28.94 percent from 205,835 a year earlier.

The import share of the July market, 29.52 percent, was actually only fourth best for the month. A record 31.68-percent penetration was achieved in 1982.

Seven-month sales for the industry numbered 6,531,200, up 2.56 percent from 6,368,183 in 1984. Domestics were up 0.35 percent, to 4,947,884 from 4,930,455. Imports had a 10.22-percent plus margin over 1984, up to 1,583,316 from 1,437,728.

Chrysler Corp. was the frontrunner among U.S. auto makers with its 6.14-percent July sales increase. Chrysler reported sales of 87,766 new passenger cars this year versus 82,691 in July, 1984.

Ford Motor Co. also managed to come out ahead, up 1.88 percent, to 165,621 from 162,568. General Motors dropped 12.52 percent, to 348,936 from 398,858. American Motors plunged 48.90 percent, to 12,144 from 23,763.

Honda failed to match its year-ago number, dipping 2.97 percent, to 9,338 from 9,624. Volkswagen missed by 6.20 percent, dropping to 6,198 from 6,608. Nissan reported first-year July sales of 3,524 Tennessee-built Sentras.

The domestic market included GM with 55.08 percent, down from 58.30 percent. Ford was up to 26.14 percent from 23.76 percent. Chrysler earned 13.85 percent compared with 12.09 percent a year earlier.

AMC slipped to 1.92 percent from 3.47 percent. Honda sales accounted for 1.47 percent, up from 1.41 percent. VW climbed to 0.98 percent from 0.97 percent, and Nissan held 0.56 percent of the recent market.

Sales of domestic makes in July showed more declines than increases, compared with year-ago totals. Those with plus signs were Plymouth, up 9.42 percent; Dodge, up 15.90 percent; Ford, up 1.64 percent; Mercury, up 1.95 percent, and Lincoln, up 3.60 percent.

Chrysler was down 5.79 percent, Buick was down 20.58 percent, Cadillac dropped 7.14 percent and Chevrolet was off 13.18 percent. Oldsmobile sales slipped 5.64 percent, Pontiac was down 13.16 percent, AMC plunged 44.61 percent and Renault fell 49.17 percent. VW was down 6.20 percent and Honda slipped 2.97 percent.

With 26 selling days in the month this year, the domestic daily rate of 24,366 was down 10.96 percent from 27,364 based on 25 selling days in 1984.

The import sales romp was spurred by big gains for Toyota and Nissan plus generous increases for the German makers whose sales had been crippled by a strike a year earlier. For example, Audi sales were up 84.82 percent, BMW was up 54.50 percent, VW was up 65.06 percent, and Porsche sales and Mercedes-Benz sales tripled.

Toyota reported its second-best month ever, its sales reaching 68,753, up 32.31 percent from 51,962 last year. Nissan was up 26.98 percent, to 53,564 from 42,183.

Other July winners included Jaguar, up 34.24 percent; Isuzu, up 85.92 percent, and Peugeot, up 15.07 percent. Mitsubishi sales doubled, while Subaru was up 3.13 percent. Honda dropped 7.25 percent, Volvo was up 7.65 percent.

The import market share of 29.52 percent was the largest piece of the pie. Next in size were domestic intermediates with 24.82 percent, followed by compacts at 15.42 percent, subcompacts at 12.41 percent, standards at 9.41 percent and luxury models at 8.42 percent.

A year ago, the market spectrum featured imports at 23.15 percent, intermediates at 24.00 percent, compacts at 18.91 percent, subcompacts at 14.53 percent, standards at 11.19 percent and luxuries at 8.22 percent.

For July, 1985, domestic-only market shares included intermediates at 35.21 percent, compacts at 21.88 percent, subcompacts at 17.61 percent, standards at 13.35 percent and luxuries at 11.95 percent.

July 21-31 sales extended the domestic string of losses to five consecutive periods. Down 10.63 percent, to 242,413 from 271,260 last year, the most recent total included drops for every maker except Chrysler and, of course, newcomer Nissan.

Chyrsler was up 7.21 percent. GM dropped 14.92 percent, Ford was down 2.96 percent, AMC plunged 51.56 percent, VW was off 0.79 percent and Honda dropped 32.42 percent.

GM sales accounted for 54.62 percent of the third-period market. Ford cornered 26.03 percent, Chrysler had 14.18 percent and AMC earned 2.21 percent. VW held 1.30 percent, Honda had 1.20 percent and Nissan had 0.46 percent.

With nine selling days in the period both years, the daily rate was off 10.63 percent, to 26,935 from 30,140.

6,000 attend kit-car show; 37 firms exhibit products

Continued from Page 17

kit drew a lot of attention. Tim LoVette owner of Manta Cars, Inc., said, "We are pleased and surprised at the acceptance of this vehicle. The way this Corvette is going, we'll be doubling or tripling our space in the next six months, at least doubling. We can't produce as many as we're selling now."

LoVette said he has a sizeable contract for more than 200 vehicles from Custom Vehicles International, a Texas firm. "We supply the assembled coachworks, they put the engine in. They buy their own chassis and then wholesale them through their dealership network," he explained.

That contract is enough to keep Manta's sole production facility at Santa Ana, Calif., busy for some time. The plant is 18,000 square feet and employs 22 workers.

The kit maker attributes the success of the Corvette kit to the original car's popularity. "There's just a real nostalgic love affair with that car, especially with people over 40," he saids. "They couldn't afford it when they were younger and now there aren't too many around."

Another selling feature is that the kit utilizes new GM parts making the kit much more appealing than trying to restore an original model. "It's like driving a brand new Monte Carlo," he added.

LoVette has added a new feature to the 1950s model. "The car has a soft top—just like the original. We've designed a removable hard top to make it an all-weather car."

Orlando auction breaks records

ORLANDO.—Single-day consignment and sales records were broken at Orlando Auto Auction's 13th Anniversary and Dealer Appreciation Sale, according to a company spokesman.

A total of 3,578 cars was consigned to the auction, making the sale the largest single-day auto auction in Orlando Auto Auction's history. Of that total, 2,289 vehicles were sold, also a new mark.

A record 448 different buyers accounted for those sales, grossing more than $18 million.

Joe Wissens

Mercedes replica is a show stopper

This Mercedes-Benz 540K, built and displayed by private owners Kevin Hamelen and Jack Boehning, received three awards at the show—best of show, best paint and best roadster. The kit was produced by Thoroughbred Motorcars, Inc., Redmond, Wash.

Sales slow down; haulers' strike a factor

U.S. car supply rises to 65 days

Continued from Page 1

AMC, 2.71 percent; VW, 1.08 percent; Honda, 0.29 percent, and Nissan, 0.20 percent.

By size class, the Aug. 1 stockpile was split like this: Subcompact, 18.24 percent; compact, 21.30 percent; intermediate, 33.92 percent; standard, 13.04 percent, and luxury, 13.50 percent.

One month earlier, the shares were: Subcompact, 18.18 percent; compact, 21.60 percent; intermediate, 33.34 percent; standard, 13.93 percent, and luxury, 12.95 percent.

The domestic subcompacts were overstocked on Aug. 1, with an average 67-day supply. The breakout: Encore, 115; Horizon, 102; Chevette, 100; Laser, 96; Omni, 94; Pontiac 1000, 88; Daytona, 85; Nova, 84; Charger, 83; Fiero, 78; Turismo, 73; Golf, 69; Lynx, 66; Alliance, 65; EXP, 52; Escort, 51; Sentra, 25, and Accord, 11.

The 63-day average supply of compacts broke down this way: Eagle, 171; Cimarron, 110; LeBaron, 90; Capri, 86; Firenza, 79; Aries, 72; Camaro, 70; Reliant, 70; Sunbird, 70; Skyhawk, 64; Cavalier, 58; Topaz, 57; Firebird, 52; Tempo, 48, and Mustang, 37.

The 62-day average for intermediates included New Yorker E and E-Class, 122; Regal, 111; Somerset Regal, 105; Caravelle, 103; Dodge 600, 103; Citation, 101; Grand Prix, 95; Lancer, 86; Bonneville, 85; Calais, 81; LeBaron GTS, 68; Pontiac 6000, 65; Cutlass Supreme, 64; Thunderbird, 64; Monte Carlo, 62; Century, 61; Cougar, 56; Celebrity, 51; Marquis, 44; Skylark, 44; Cutlass Ciera, 42; LTD, 38, and Grand Am, 28.

There was an average of 63 days' worth of standard-size cars: Parisienne, 93; Chevrolet, 66; Diplomat, 64; Olds 88, 62; Crown Victoria, 61; Grand Marquis, 60; LeSabre, 52, and Plymouth, 48.

There was an overabundance of luxury cars: 73 days' worth. The breakdown: Fifth Avenue, 110; Seville, 97; Toronado, 91; Corvette, 85; Eldorado, 81; Riviera, 78; Electra, 75; Cadillac, 72; Continental, 62; Olds Ninety-Eight, 55; Lincoln, 51, and Mark VII, 44.

GM-Holden's Camira revamped

The Camira, manufactured by General Motors-Holden's of Australia, has several new features, including restyled headlights and a 1.8-liter fuel-injected engine with digital electronic ignition.

Empire of America has '100 pct. financing'

No-downpayment car loans offered

By John A. Russell
New York Staff Writer

NEW YORK.—Empire of America Federal Savings Bank announced last week that it will offer 100 percent financing on auto loans up to $45,000.

According to Joseph N. Pastwik, senior vice president of the Buffalo-based bank, this new loan offers the customer the opportunity to finance a new car without a downpayment.

The customer can select a term up to 60 months, according to Pastwik. He said this type of loan will be offered only to the consumer, but the bank probably will introduce "indirect" or dealer-offered financing soon.

He said Empire is one of only two banks in the country offering the "no-downpayment" financing to auto buyers.

This is the second innovative type of auto financing the company has offered within two months. Last month, Empire announced its "TURBO" loan, which is a balloon-payment type that reduces buyers' monthly payments but places a predetermined residual value on the vehicle at the end of the 36- or 48-month term.

At that time, the consumer has several options: He can pay the bank the guaranteed value and keep the car; turn the car over to the bank in good condition, satisfying the loan; sell the car privately for as much as possible and keep the difference, or refinance the balance of the loan at the then prevailing interest rate and keep the car.

This system is very similar to leasing.

For Empire, auto business has become a key to the future. Pastwik told the International Motor Press Assn. that the bank entered this field in 1982. The first year, the bank booked $3.7 million in auto loans. By 1984, after offering loans through non-bank outlets, including auto dealers, it wrote $90 million worth of new business.

While doing business only in Michigan and New York, Empire has been pursuing the auto business with a passion. Its first effort, Pastwik said, was to offer 11.5 percent financing in 1983. Then it introduced the TURBO loans and now the no-downpayment concept.

Pastwik said the bank stresses service to its customers.

Consequently, for dealers, the bank guarantees loan approvals in 20 minutes or less. It is open on weekends and holidays when the dealer needs the bank.

Pastwik sees the auto financing industry developing in the future in three critical ways.

He said a secondary market has developed for auto-backed certificates with financial institutions offering securities backed by auto loans. The first such offering was made by Marine Midland Banks, of New York.

"By selling auto loans to secondary market investors," he said, "an institution is able to continually replenish its funding source and receive a servicing fee that represents a steady stream of income over the life of the loan."

In addition, he said, if the secondary market investors will buy the loans, financial institutions will not hestitate to create new wrinkles in the financing. Therefore, variable-rate plans are the second critical area for development.

The third major trend, he said, will be the "relationship banking" concept in which the financial institution offers complete service to the dealership from floorplanning to financing the purchase for the consumer.

He said these are the opportunities that prompted Empire to enter the auto field, since he believes the captive finance companies and big banks will feel heat of the competition.

Mair tells why U.S. makers lag in production changes

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich.—There are historical reasons why U.S. manufacturers are slow in introducing new manufacturing technology, something they often are criticized for, a top General Motors engineer said.

Speaking at a University of Michigan automotive management seminar, Alex C. Mair, vice president and group executive, Technical Staffs Group, sketched those reasons.

Mair used body die changes as an example. Japanese workers can make die changes routinely in five or six minutes. Recently, they have been clocked at 140 seconds, Mair said. In comparison, it takes GM workers seven or eight hours to do the same job, he said.

He said that when practices were being formulated in past years, GM paid more attention to the lowest-cost bidder than to quality. That led to heavy use of relatively old presses such as those in which dies are used.

A second reason, he said, involves success.

"The Chevrolet Impala in its heyday was selling at a rate of 1.5 million units a year with common front fenders," Mair said. "It took two complete press lines running six days a week all year long. There was no way we wanted to change those dies."

Fragmentation of demand today means that 350,000 to 380,000 units is a long run, and die-change speed becomes important.

obituaries

Joseph P. Kelleher

ELLENSBURG, Wash.—Joseph P. Kelleher, owner of Kelleher Motor Co., and president of the Washington State Automobile Dealers Assn. in 1967-68, died July 22. Mr. Kelleher was named a Time Magazine Quality Dealer in 1974.

Manny Weiser

CLEVELAND.—Manny Weiser, 74, one of the founders of the Cleveland Independent Auto Dealers Assn., and its 1985 secretary-treasurer, died July 22. Mr. Weiser had served several terms as president of the dealer group and was a member of the board. His business enterprises included M&M Motors and the Cleveland Auto Auction.

H. Floyd Brown

CORONA DEL MAR, Calif.—H. Floyd Brown, one of the nation's pioneer automobile dealers, died July 19. Mr. Brown was appointed a Nash dealer in 1921 and was active in the auto business until his retirement in 1975 when he sold his American Motors dealerships in San Bernadino and Riverside. Mr. Brown was a former president of the Southern California Motor Car Dealers Assn.

Iacocca program gives scholarships to eight students

DETROIT.—Chrysler Corp. Chairman Lee Iacocca has announced eight winners of the Lee Iacocca Scholars Program.

Funded by the Iacocca Foundation, the program is designed to recognize and reward high school achievement by dependent children of Chrysler employes. It provides four-year scholarships to high school seniors who plan to pursue an undergraduate degree at an accredited four-year college or university.

The Citizens' Scholarship Foundation of America, St. Peter, Minn., processed about 1,400 applications for two programs, the Lee Iacocca Scholars Program and the Chrysler Corp. Fund Scholarship Program. Students not selected for the Iacocca program were automatically considered for the Chrysler scholarship.

Ninety-one students received Chrysler Fund Scholarships, designed for Chrysler employes' children who are enrolled or plan to enroll as full-time students at a two-year or four-year college, university, or approved vocational/technical school.

A total of $125,000 was available for distribution in both programs.

Chinese output up 48 pct.

BEIJING, China.—Chinese makers produced 205,000 motor vehicles in the first half of this year, up 48 percent from the year-ago period, according to the official Xinhua News Agency. The pace is well above the industry's planned production of 363,000 vehicles for 1985.

$49-over dealer sues GM; wins some, loses some

Continued from Page 3

Murphy allowed Peterson standing under the Minnesota antitrust law and under the federal Dealer Day-in-Court Act.

Finaliy, Judge Murphy refused to grant Peterson's request for a preliminary injunction that would have ordered GM to allocate, "preference" and deliver to JPM an allotment of vehicles each month. Peterson also wanted restrictions on wholesale financing by GMAC and an order that GM tell the public the availability of vehicles.

Judge Murphy decided that such an injunction would probably hurt GM and GMAC without necessarily benefiting JPM, already in a precarious position in bankruptcy proceedings.

Said Judge Murphy: "Both sides have raised valid points of public concern. The public does have an interest in increased competition in the automobile industry and resulting lower prices. The public also has a legitimate interest, however, in preserving the bankruptcy regulatory scheme and in preventing further financial loss to consumers and creditors."

Though output for the month was lowest this year

July car production best since '77

By Louise Kertesz
Detroit Reporter

U.S. auto makers assembled 618,583 cars in July—the highest production for that month in eight years.

Last month's total was the best July build since 1977, when 694,436 cars were assembled.

Yet, production for July was the lowest of any month this year, due to plant closings for vacations and model changeovers.

Total output for the month was 10.83 percent below June's 693,688, but was 17.85 percent higher than the 524,872 cars produced in July, 1984.

Last week's estimated build of 115,321 cars fell 12.68 percent from the previous week's 132,063.

The total dropped because all Chrysler plants but one were down for model changeover, and the Jefferson (Detroit) plant, which had just reopened after changeover, was not reporting production.

Last week's scheduled output was about the same (up 0.04 percent) as the year-ago week's 115,275.

So far this year, 5,190,150 cars have been assembled, 4.38 percent more than the 4,972,470 built last year at this point.

Companies shared last week's scheduled production as follows: General Motors, 63.82 percent; Ford Motor Co., 26.81 percent; Honda of America Mfg. Co., 2.65 percent; American Motors, 2.38 percent; Volkswagen of America, 1.63 percent; New United Motor Mfg. Co., 1.60 percent, and Nissan Motor Mfg. Co., U.S.A., 1.11 percent.

Last week, Ford's plant in Lorain, O., began producing 1986 Thunderbirds and Cougars, and the company's Dearborn plant began assembling 1986 Mustangs and Capris.

GM's Leeds (Mo.) plant began producing the 1986 Buick Skyhawk last week.

GM's plants in Bowling Green, O., and Orion Township, Mich., reported no production last week as workers prepared for model changeover.

The company reported production of 85 1986 Buick Rivieras during the past two weeks at its new Detroit-Hamtramck plant. GM's Linden (N.J.) facility continues to build the 1985 Riviera.

The following GM plants closed Aug. 9 for model changeover: Detroit (to Sept. 5); Fairfax, Kans. (to Aug. 20), and Wentzville, Mo. (to Aug. 19).

The company's plants in Norwood, O. (Camaro-Firebird), and Pontiac (Fiero) are scheduled to resume production today (Aug. 12) after being down for changeover.

Honda's Marysville (O.) plant is closed for model changeover and vacation this week. It is due to resume operations Aug. 19.

Chrysler's plants in St. Louis (No. 1) and Belvidere (Ill.) returned to work today after changeover.

GM scheduled two overtime shifts Saturday (Aug. 10) at its Lansing plants (Nos. 1 and 2).

Daily overtime is scheduled this week at the following Ford plants: Chicago; Dearborn; Wayne, Mich.; Edison, N.J.; Wixom, Mich., and Kansas City.

Canada's July truck output is highest ever for month

Canadian truck makers built 51,090 units in July, 19.83 percent more than the 42,635 built in July last year and their best total ever for that month.

Car production in July was the highest for the month since 1973.

So far this year, the truck manufacturers have posted four other best-ever months: January, February, April and May.

With plants down for vacation and changeover, however, July's output was down 33.31 percent from June's 76,606 and was the lowest build of any month this year.

General Motors' Oshawa (Ont.) plant closed for vacation and changeover last week, and Chrysler's Windsor (Ont.) plant resumed production at a reduced pace after being down for changeover. As a result, truck output for the week fell to its lowest point this year.

Last week's build of 8,129 trucks dipped 2.95 percent from the previous week's 8,374 and was 39.56 percent below the year-ago week's 13,449.

So far this year, 523,364 trucks have been assembled, 7.08 percent more than the 488,765 completed last year at this point.

GM's truck plant in Oshawa is due to resume production Aug. 19.

July production of 67,495 cars was up 8.63 percent from July 1984's 62,134 and was the best output for that month since July, 1973, when 75,505 cars were assembled.

But due to vacations and changeovers, car production for July was the lowest build for any month this year, falling 33.36 percent below June's 101,290.

Last week's auto production of 13,413 units was down 6.83 percent from the previous week's 14,397 but 9.31 percent more than the year-ago week's 12,271.

Year-to-date, 632,867 cars have been built, 6.44 percent fewer than the 676,414 completed last year at this point.

Volvo's plant in Halifax (N.S.) closed last week for vacation. It is scheduled to reopen Aug. 26.

GM's auto plant in Oshawa is scheduled to return to work today (Aug. 12) after being closed for two weeks for vacation and changeover.

Auto-engineering plant to be built in Arizona

CASA GRANDE, Ariz.—Calsonic, Inc., of Irvine, Calif., plans to build a $25-million automotive-engineering plant on 3,050 acres near here beginning next year.

Calsonic is a subsidiary of Nihon Radiator Co., Ltd., of Tokyo, which makes air conditioners, heaters, radiators and exhaust systems. Nissan owns 40 percent of Nihon.

July truck build highest for month in seven years

Domestic truck makers assembled 238,434 trucks in July. It was the highest total for that month since the 278,020 trucks built in July, 1978.

But July's output, cut by plant closings for vacations and model changeovers, was the lowest of any month this year.

Last month's total fell 20.66 percent below June's 300,513 but was 11.73 percent better than the year-ago month's 213,408.

With Chrysler Corp.'s Warren (Mich.) plant back in operation after being closed since Aug. 5 for model changeover, last week's scheduled production of 64,323 trucks was up 7.67 percent from the previous week's 59,742.

Last week's output was 18.39 percent higher than the year-ago week's 54,332.

So far this year, 2,111,922 trucks have been assembled, 9.97 percent more than the 1,920,473 completed last year at this time.

Production of 1986 models begins this week (Aug. 12) at the following Ford Motor Co. plants: Kansas City, Norfolk, Twin Cities and Louisville.

General Motors scheduled two overtime shifts Saturday (Aug. 10) at its facilities in Flint (Lines 1 and 2).

Ford has scheduled daily overtime this week at its plants in Wayne, Mich., and Lorain, O.

The same plants are slated for overtime Saturday (Aug. 17).

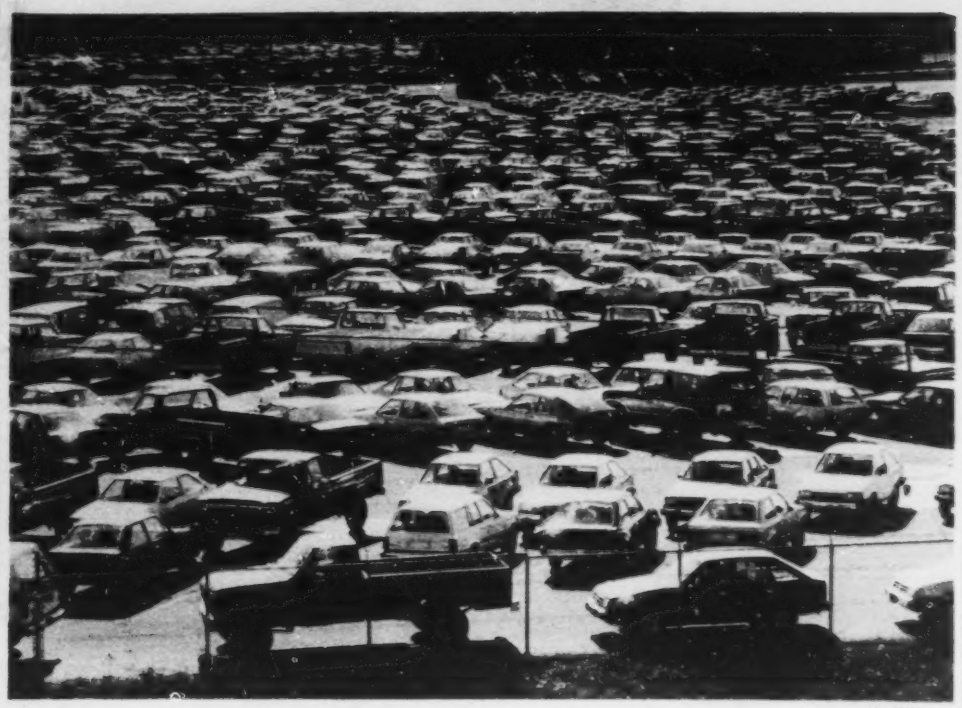
Cars, trucks piling up



Joe Wilssens

Waiting for the end of the strike

Cars and trucks continued to stack up last week in shipping yards waiting for haulers to return to the roads. E&L Transport's lot in Woodhaven, Mich., was jammed with Ford Motor Co. autos and trucks assembled at nearby Dearborn plants.

Dealers watching for hauler trucks as sales plummet

By Richard Johnson
Detroit Reporter

Auto dealers around the country may be receiving shipments of strike-bound 1985 cars and trucks early this week, following a tentative settlement between new-car haulers and transport companies.

Representatives of Teamster locals approved the pact by a vote of 91-1 last Friday (Aug. 16). Union officials said picket signs would come down at noon Sunday (Aug. 18) and stay down until a ratification vote of more than 20,000 striking members is conducted. Those drivers who want to go back to work may do as the signs come down.

Ballots were scheduled to be mailed Thursday (Aug. 22) and were due to be returned by Sept. 12. Terms of the contract settlement were not disclosed.

The union's executive board could order haulers back to work prior to a vote, but it would seem to be a risky move by the leadership. An earlier management proposal which had been endorsed by the union brass was overwhelmingly rejected by the rank and file.

Teamster local representatives convened in Washington to review terms of an agreement reached by bargainers two days earlier. Prior to the meeting, sources said dealers were being told by manufacturers to expect shipments of new cars and trucks to begin arriving as early as midweek.

While neither side would release details of the three-year tentative agreement, a spokesman for the National Automobile Transporters Labor Division said, "There is a substantial improvement compared to the contract in 1982."

Both domestic manufacturers, which have not altered production schedules during the strike, and foreign importers applauded news of the tentative pact.

The walkout, which began July 26, has caused stocks to dwindle at both domestic and import dealerships around the country.

Japanese companies in particular were reporting a slim supply of cars at dealerships. Toyota last week cited a three-day inventory at dealers, dealer prep centers and in transit. Honda's imports stood at 9 days' supply as of Aug. 1, but many Honda dealers around the

Please turn to Page 44, Col. 1

Import stocks fall in strike

By Kathleen Hamilton
Assistant Managing Editor

One look at the Aug. 1 import inventory numbers is all it takes to see why importers wanted a quick end to the haulers' strike. New-car inventories were down, but trucks—a profit mainstay of the Japanese makers—were way down, thanks to booming sales, especially at Toyota.

There were 291,871 new imported cars in dealer and port inventories on Aug. 1, a two-month low. That translated into 29 days' worth, also a two-month low. But it came as import-car sales were on an upswing and stood in sharp contrast to a 65-day supply of domestic cars on hand at dealerships, at factories and in transit.

For both imports and domestics, inventory figures usually include about 10 days' worth of cars that are in transit at any given time.

Just a whisker ahead of Fiat in first-half sales

VW Group snares lead in Europe

By Richard Feast
European Editor

LONDON.—Preliminary new-car sales returns from Western Europe for the first half of this year confirm the lead established by the Volkswagen Group, whose 13 percent market share was a little ahead of Fiat Auto's 12.8 percent.

The 1985 title race looks like a match between those two, which have built up a distinct advantage over Ford, General Motors, the Peugeot group (PSA) and Renault.

If the VW-Audi pairing maintains its position—and there are few signs to the contrary—it will be its first time as number one.

The unofficial early returns indicate that new-car demand in Western Europe is static. The total for the first half was 5,657,500, spread across 16 countries. The difference in comparison with the same period last year is too close to call.

West Germany's performance was the most outstanding factor. The catalyst debate and resulting public uncertainty meant a shortfall of more than 107,000 units for the six months. Five other countries (Belgium, France, Spain, Switzerland and the U.K.) contributed to the deficit, although by smaller amounts.

All other national markets recorded advances, led by Italy's gain of 48,000, Sweden's 28,000 and Norway's 20,000. Thus, but for the German problem, Europe would probably be heading for a record sales year.

What makes the VW performance even more remarkable is that it was achieved despite what is happening in its important domestic market. VW has gone on an export offensive, spearheaded by the second-generation Golf. At the same time, it increased its share in the smaller German market.

Nowhere was this export push more pronounced than in Italy, the one market which recorded solid growth. VW's sales were up 63 percent. Similarly, the Peugeot nameplate sold a third more, and Renault was up nearly a quarter.

As a result, Fiat's market share was squeezed—though at nearly 53 percent of its domestic market, there seems little cause for concern.

But the domestic loss is compounded by a widespread fall in

Chrysler's Gulfstream may buy Canadair

MONTREAL.—Gulfstream Aerospace Corp., the aircraft manufacturer which was purchased by Chrysler Corp., reportedly has expressed interest in buying Canadair, Ltd., the state-owned aircraft maker that competes with Gulfstream, according to Canadian Government officials. Canadair earned $6 million (Canadian) on $376 million in sales in 1984. The government has put the firm on the auction block and has supplied information to Gulfstream. Gulfstream and Chrysler officials reportedly have made visits to Canadair. Chrysler completed the purchase of Gulfstream last week.

GM offering 7.7 pct. to fuel sales upturn

By Richard Johnson
Detroit Reporter

GeneralMotors jumped into the post-haulaway-strike marketing fray last week with an unprecedented 7.7 annual percentage rate offering—the lowest retail financing rate in GMAC history.

Participating GM dealers will offer the special percentage rate on most 1985 cars and light-duty trucks.

The company vowed a seven-week "sales blitz" to make way for the introduction of 1986 models. The incentive program pushes back the company's 1986 public introduction one week, from Sept. 26 to Oct. 3.

With little time remaining in the model year, other domestic auto makers are expected to follow with their own sales incentive programs. The widely anticipated sales push is being spurred by the manufacturers' need to clear out 1985 models that have piled up in storage yards and at railheads during the three-week-long haulers' strike.

But GM was also interested in countering an apparent reluctance among customers to visit dealerships during the strike. A spokesman said publicity about the walkout has caused a falloff in showroom traffic even though he said General Motors dealers still have "a lot of merchandise."

The domestic auto makers last week reported a combined 10 percent drop in car sales for the first 10 days of August. GM sales were off 10 percent for the 10-day period.

GM estimates that the 7.7 percent rate makes available an average saving of $1,550 and as much as a $2,250 saving on the financing of eligible new cars and trucks.

The low financing applies to deliveries from inventory by participating dealers. The special rate

As talks open at Chrysler

Security, profit share high on UAW's list

By Arthur Flax
Automotive News Staff

Negotiators for Chrysler Corp. and the UAW got together last week to open their labor talks, and after a few days of predictable sparring, they recessed the sessions until Aug. 27.

The union presented some of its demands. Chrysler listened, but didn't have too much to say. During the recess, the company will study the UAW's presentation and will put forth a proposal of its own when the talks resume.

Job security is the number one goal of the UAW in its contract negotiations with Chrysler, UAW President Owen Bieber said.

Discussions on job security will be closely tied to the issue of outsourcing of components, Bieber said.

Profit sharing is also high on the union's "want" list. So are increased wages, of course. The UAW won a profit-sharing plan at Chrysler in 1981 but gave it up the following year in favor of a wage hike. Chrysler workers would have picked up about $5,000 each if they had kept the program.

Bieber said, "This is the year that, obviously, Chrysler workers come back to the pattern with their counterparts at GM and Ford, and our proposal is to come back to the pattern relative to future contracts and opening dates as well."

Bieber indicated, but did not specifically say, that the new Chrysler contract should expire on the same date as the Ford and GM contracts. The current Chrysler contract is due to expire Oct. 15 of this year, and the GM and Ford contracts will expire Sept. 15, 1987.

Some of the discussions will also focus on local working conditions and plant investment according to UAW officials.

"There are local unions in the last five or six years that asked to correct working conditions. The money wasn't there then. The money is there now," said UAW Vice President Marc Stepp, director of the union's Chrysler department.

Bieber added that the union believes Chrysler has not made the "proper investment" in some of its plants to stay competitive.

Asked if the Chrysler-UAW agreement will bear any similarity to the GM Saturn pact, Bieber said, "I thought we put to rest the Saturn question because it doesn't apply here . . . I don't want to spend time talking about Saturn where there is no Saturn."

As for Chrysler's proposed Liberty small-car venture and its joint ventures with Mitsubishi in the U.S., he expressed the hope and expectation that the cars will be built by U.S. UAW workers.

Bieber said, "We are happy to come to Chrysler under the cur-

Chrysler talks open

Owen Bieber, right, UAW president, and Thomas Miner, Chrysler industrial relations vice president, met each other halfway across the bargaining table as negotiations for a new Chrysler-UAW contract began in Detroit last week.

Shortage of cars cuts sales in early August

By Jenny L. King
Detroit Reporter

Early August domestic sales were severely hampered by a lack of new cars at dealerships around the country. Dealers couldn't sell transportation because the Teamsters Union strike left factories largely without transportation for their new products.

Surely, aerial photos of storage lots filled to overflowing with new cars didn't make anyone feel better as the Aug. 1-10 total fell 10.13 percent below the comparable 1984 period.

The early-August drought caused 1985 year-to-date sales to fall below 1984's for the first time. The total is 5,107,122, down from 5,107,637 at this point a year ago.

Chrysler Corp. was the only domestic maker to report a gain for the Aug. 1-10 period. Honda, which has been on a long sales honeymoon in the U.S.—particularly since opening its Ohio assembly operation—suffered the largest setback, plummetting 81.40 percent for the period as a result of the car haulers' strike.

August sales often appear slow as customers either are out of town on vacation or have decided to wait until September for the arrival of the next model year cars. This year's early-August total turned out to be the lowest for any 1985 10-day reporting peiod, and it produced the weakest daily selling rate of the calendar year.

The count was 159,238, down 10.13 percent from 177,182 a year earlier. With nine selling days, the daily average was a very modest 17,693, down 10.13 percent from 19,687.

Chrysler's 15.02-percent sales gain would have been good in the best of times. It was remarkable, given the current conditions. Chrysler climbed to 24,640 from 21,423 last year and rose from

Ford faces tough road on CAFE

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Ford Motor Co. has given updated estimates of its 1987-89 domestic CAFE levels to NHTSA in support of its earlier petition asking NHTSA for relief from those standards. The 1987-89 standards are 27.5 MPG.

While Ford has asked for and received confidential treatment for the projections, they are thought to be serious shortfalls since the remedies suggested are costly to Ford and threatening to workers.

NHTSA is not likely to address those future standards until October or thereabouts—after it has decided what to do about the 1986 CAFE standard which Ford, General Motors and the European luxury-car makers want lowered from the current 27.5 MPG to 26 MPG.

Donald Buist, Ford's director of auto emissions and fuel economy, said that an early-1986 decision on 1987-89 CAFE standards is too late for Ford to make decisions that are not wasteful.

In a letter to Barry Felrice, NHTSA associate administrator for rulemaking, Buist repeated earlier positions—that Ford will not be able to sell enough small cars because the Japanese will be selling more and that any incentive Ford may offer on its own subcompacts will be met by its competitors and thus will limit Ford's sales in that market segment.

Buist listed four choices Ford may face if the government does not lower the 1987-89 standards:

1. Restricting sales of the Ford Crown Victoria and Mercury Grand Marquis and station wagons.

2. Canceling production of those cars.

3. Transferring production of those cars "outside North America" (presumably outside the U.S. or Canada, but not necessarily excluding Mexico).

4. Instead of transferring total production, "increase the use of imported components to more than 25 percent of the value of these cars, so as to qualify them for inclusion in Ford's import fleet." (Domestic auto makers have two fleets for CAFE purposes: Those with 75 percent or more U.S.-Canadian content or the import fleet with less than 75 percent U.S.-Canadian content.)

But in a telephone conversation with Automotive News, Buist indicated that the last choice is much more likely than the other three.

For example, Ford said reducing or canceling production would hurt consumer choice and jobs more than transferring production of major components although it would mean "unnecessary extra investment and tooling, workforce dislocations and production start-up complications."

That would be less sweeping than dropping all Crown Victoria and Grand Marquis models from the domestic fleet—a move that would increase Ford's CAFE by about 0.5 MPG per year.

Buist told Automotive News the best choice to make—other than meeting lower CAFE standards rolled back by NHTSA—would be to increase the use of imported components to more than 25 per-

Toyota plant sites to be selected by 'open bidding'

By Frank Gawronski
Tokyo Bureau Chief

TOKYO.—Toyota Motor Corp. will select sites for plants in the U.S. and Canada through a method of so-called "open bidding."

According to reports, the Japanese auto maker has already sent out some 30 questionnaires to states and cities in the U.S. and to some Canadian provinces.

The questionnaire deals with land; industrial infrastructures such as electricity and water; laws and tax systems, and preferential treatment offered in the regions where the plants might be built.

Toyota will select plant sites on the basis of the questionnaires, which will be collected by the end of August. A formal decision will be made around November.

If everything goes according to plan, the company will set up local subsidiaries to purchase plant sites within the year, and car production will begin in 1988.

Toyota plans to construct a plant in the U.S. for annual production of 200,000 cars in the 2,000-cc class and a plant in Canada to build 50,000 units in the 1,600-cc class.

Williams' 200th limo

Williams Motor Works, Gardena, Calif., has built its 200th limousine. Shown are Dan Williams, founder and president, and Robi Sinclair, vice president in charge of marketing. The milestone limousine is a 56-inch extended wheelbase Cadillac Fleetwood.

Edsel Ford explains great expectations

L-M sees Sable matching Taurus

By Richard Johnson
Detroit Reporter

Lincoln-Mercury's new Sable intermediate could match sales of Ford Division's Taurus line when the front-wheel-drive twins debut this fall, according to L-M General Marketing Manager Edsel B. Ford II.

Although production schedules reportedly now call for about 250,000 Taurus units and 150,000 Sables during the 1986 model year, Ford told the Detroit Auto Writers Group "hopefully it will be 50-50."

If Sable keeps pace with Taurus, they would become the only cross-divisional nameplates with an even split between Ford and Mercury nameplates. L-M's best performers against Ford Division are Grand Marquis, which sold the equivalent of 82 percent of Crown Victoria's total for the first six months of 1985, and Cougar, which stood at 70 percent of Thunderbird sales.

For LTD/Marquis, the body style to be replaced by Taurus/Sable, L-M's Marquis sales were 46 percent of its Ford Division counterpart through the first half of the year. As for other models, Topaz was at 28 percent of Tempo, Lynx sales amounted to 20 percent of Escort sales and Capri managed only 9 percent of Mustang sales totals.

But Edsel Ford said he believes Sable has a chance to match Taurus stride for stride once the cars hit showrooms in November. He said his hope springs from "the press reports I am reading."

"Every time I pick up a magazine with a review, the writer has chosen to write about Sable," he said. "I read one just the other day in which the writer said 'Taurus is a nice car, but Sable knocked me out, so I'm going to concentrate this article on Sable.' Now if sales have relationship to that, we ought to blow Taurus away. Hopefully, it will be 50-50."

Asked about projections of a 250,000-150,000 sales mix in favor of Taurus, Ford said "I think that may be what the production schedules are, but it's a function of what each division earns. It's done on an earn basis. We take into account things like days' supply and dealer stock.

"If those are the (production schedule) numbers, those are the numbers and they are probably going to build them that way," he said. "My optimism is based strictly on what the press is saying, and I'm translating the enthusiasm I'm reading in the articles into what I think sales may be. Now, that may not happen."

For months, L-M partisans have been quietly anticipating the friendly, intramural competition between Ford Taurus and Mercury Sable. Indeed, the company has stressed that Sable is something more than a warmed-over version of Ford Division's entry.

At a press preview for the cars in Los Angeles earlier this year, Ford Motor Co. President Harold A. Poling noted that the twins share no common body panels and that Sable is more than two inches longer with a larger trunk, a unique front end, hidden roof pillars and its own instrument panel.

Each line consists of a four-door sedan and a four-door, two-seat wagon.

Ford told the DAWG meeting that he has plans for Capri—Lincoln-Mercury's poorest performer against a Ford Division counterpart. The compact car achieved sales of 7,947 for the first six months of the 1985 calendar year, or 21 percent below those of the same period last year. Meanwhile, Mustang sales were 84,981 from Jan. 1 through June 30, 23 percent higher than in 1984.

"I'm going to try to resurrect Capri this year," Ford said. "I think it's a shame. Mustang had that $6,885 car that we launched at Ford Division last year, and the poor little Capri really got the short end of the stick.

"We have only one body style, we don't have the notchback

AMC needs Toledo space for new Comanche pickup

Canada to produce Jeep CJ-7

By Richard Johnson
Detroit Reporter

American Motors last week announced plans to move CJ-7 production from Jeep assembly operations in Toledo to Brampton, Ont., where AMC currently turns out the four-wheel-drive Eagle.

The shift to Canada will make room for production of the new Comanche compact pickup coming this fall and relieve pressure at Toledo, which a company spokesman said is "bulging at the seams."

He said current production of 1,100 Jeeps daily is over the plant's optimum capacity of about 1,000 vehicles per day. The Toledo plant is producing Cherokee, Wagoneer, Grand Wagoneer, CJ and the J-10/20 pickups.

AMC will discontinue the CJ line at Toledo after Nov. 26 and resume production Jan. 6 in Canada. Relocating the 195 CJs now built daily at Toledo will give the company room to accommodate Comanche. The spokesman said production of the new pickup will be increased incrementally.

AMC will also begin building its all-new Jeep YJ model next year at the Brampton plant—apparently alongside the venerable, open-bodied CJ model that, according to most accounts, will be replaced by the new series.

• The spokesman said Brampton has enough capacity to add a CJ line along with the 80 Eagles a day now built at the plant.

Asked if YJ can be built along with Eagle and CJ at Brampton, he said, "They still have more capacity; they have built as many as 80,000 a year there when they were building Hornet and Gremlins (in the mid-1970s)." He added that there is "no end point" for CJ.

AMC President Jose Dedeurwaerder recently told Automotive News that the new model will be "an addition to the Jeep line; it will not be a replacement because the vehicle is totally different."

Dedeurwaerder said the Jeep YJ will be a 1987-model-year designation, even though production is slated to begin in April. He said there will be an official announcement on the model "very soon."

The CJ production switch is expected to have "minimal impact" on employment at Toledo, where about 700 workers are assigned to the CJ line. Some presumably will be absorbed by Comanche production. Altogether, the Jeep plant employs about 7,700 hourly workers.

Last spring, several incidents of assembly-line vandalism were reported at the Jeep operations after Toledo workers were asked to accept a less-lucrative profits-based payback of employe investments made over the past three years.

UAW members at the profitable Toledo operations preferred a "wheel-tax" option that called for the company to contribute to a reimbursement fund based on production levels.

Both company and union officials last week insisted that the transfer of CJ production is unrelated to the wave of vandalism.

Diplomats in China ride in style

Mainland China has taken delivery of a fleet of 20 Cadillac limousines. Fifteen are rear-drive Fleetwoods converted by O'Gara Coachworks, Simi Valley, Calif.; five are front-drive Fleetwood limousines. All are used for diplomatic service in Beijing.

Toyota to add Japan engine site for U.S. plants

By Frank Gawronski
Tokyo Bureau Chief

NAGOYA, Japan.—Toyota Motor Corp. is building an automobile engine plant at its facility here to prepare for increased car production in its new North American plants.

The company said it will complete the new plant, which will initially produce 20,000 engines a month, in the spring of 1987.

Toyota now manufactures about 300,000 engines a month at its two Nagoya factories, mostly for domestic use.

Additional engine production is required because the company announced last month that it will produce 200,000 cars a year at a new U.S. facility and another 50,000 units annually at a new plant in Canada—both yet to be built.

A total of approximately 500,000 engines a year will be required by the new U.S. plant and by New United Motor Mfg. Co., the company's joint venture with General Motors in Fremont, Calif.

NUMMI will increase production of the subcompact Nova from 60,000 units to 200,000 units in 1986.

There are also plans for the Fremont plant to produce 50,000 units a year of another model for Toyota's U.S. dealers.

Satellite deals, information centers 'where people congregate'

Chevy zeroes in on shopping malls

By Richard Johnson
Detroit Reporter

Chevrolet is studying several alternatives to the traditional method of retailing new cars and trucks and is in the midst of developing and launching pilot programs for satellite dealerships and upgraded electronic videotext centers in shopping malls.

The division recently opened General Motors' first satellite sales office—in Moline, Ill.—and plans to have another outlet functional by mid-September.

Later this year, Chevrolet will begin installing sophisticated new computer-based equipment in malls, according to C.N. (Bud) Moore, Chevrolet assistant general sales manager.

During an interview with Automotive News, Moore said the electronic display center will be more advanced than anything currently in operation.

Secondary locations, which are used extensively by Ford Division, have been described by Chevy as a "revolutionary" new trend in retail marketing.

Robert Starr, Chevrolet general sales and service manager, called the Moline store "a forerunner of several alternatives being studied by Chevrolet to the traditional one-dealer/one-showroom way of selling and servicing cars and trucks."

Starr said the division has "a number of programs already in the development stage that truly could revolutionize the way Chevrolet and its dealers sell and service our products."

• Moore declined to reveal the location of the second satellite store, although he indicated it would also be in a shopping mall.

"We're trying to see how we can reach more customers, and the mall has become a way of life in America," he said. "It is a place where people congregate, especially young people."

While not all of Ford's secondary outlets are situated in shopping centers, Moore said he "can't conceive of one being in a free-standing location."

"We want to put them where people are congregating," he said.

Satellite dealerships are essentially scaled-down sales offices owned and operated by a nearby dealer. The objective is to bring automobile showrooms within reach of more potential customers.

At Ford, they are generally placed in geographic areas that cannot support a complete-line dealership and are situated primarily in rural areas. However, Ford Division, which has about 150 satellite dealerships around the country, also has several secondary stores in large shopping malls.

GM's first satellite is located in the SouthPark Mall in Moline and is an extension of Mills Chevrolet, located about one mile from the mall. During the first two weeks in operation, nearly 4,000 persons went through the store and 10 cars and two trucks were sold, Chevrolet said.

In addition to a display of new cars, the secondary outlet in Moline offers a selection of parts and

Promoter tells glowing tale, but Minnesota dealer is out of business and is suing GM

$49 over: It's a bonanza for some, but a disaster for others

By Roger Rowand
Engineering Editor

The controversial $49-over-invoice method of retailing new cars is far from a forgotten issue. It still is being used and it's being cussed and discussed and taken apart in lengthening legal actions. An FTC investigation is centering on it.

Howard Van Bortel, originator and promoter of the $49-over-invoice selling program, told Automotive News there probably are 100 or so dealers using the technique across the country.

Of those, he said, about 20 are working the Van Bortel plan under his tutelage. Some of the others are what he calls poachers who use the plan without paying him. He boasts of heady successes for his clients.

If what has been unfolding in a federal courtroom in Minneapolis is any indication of what is in store for them, however, $49-over dealers have dark days ahead.

The method calls for car sales to the public through dealerships at $49 over the factory invoice. In essence, it amounts to a high-volume mail-order operation, and Van Bortel said he can document a dealership's grossing $830,000 on the sale of 300 Chevrolets.

A former Chevrolet dealer, he operates with his son, George, as Van Bortel Automotive Consultant.

He tells of stories about $49-over appearing recently in the Wall Street Journal, Consumer Reports, USA Today and of being on the cover of Money.

He talks of conferring with an FTC investigator from Dallas. He says the agency is gathering information about General Motors' reaction to $49-over dealers. Word of an FTC probe also came in a hearing in a court case involving a $49-over point. The FTC man in Dallas would neither confirm nor deny an investigation.

Van Bortel said the investigation is centered on GM reaction to $49-over dealers. He said GM's reaction is retaliation consisting of delayed deliveries of cars to $49-over points. And, he said, delay regularly stretches on for months and can add up to a dealer's going out of business.

Van Bortel mentions John Peterson Motors in Lake City, Minn., as a case in point.

However, the records in Minneapolis tell a different story.

That dealership, which handled all five GM car lines, is bankrupt and has been liquidated.

The dealer, 30-year-old Donald John Peterson who took over the point in 1980, is in federal court in Minneapolis suing GM and General Motors Acceptance Corp. He is asking for $200 million in punitive damages under common law and an undetermined sum in treble damages under federal laws covering business.

A pre-trial conference with Judge Diana Murphy is scheduled for Aug. 21. As he handled the bankruptcy case, separate from Peterson's damage suit, Bankruptcy Judge Robert Kessel noted that a $500 customer deposit was required with each order. The judge said Peterson used $245,000 in customer deposits to run the business.

A Peterson attorney has been reported as saying Peterson plans to repay deposits. He spent the money only after GM had assured him he would get cars, the lawyer said.

Judge Kessel also said he figured Peterson lost about $245 on each sale. He said it makes no sense for Peterson to sell cars.

GM said the deposits totaled $250,000 and at least $110,000 in customer deposits cannot be accounted for. The company claimed that many vehicles were ordered

Isuzu signs 165 dealers, wants 260

ANAHEIM, Calif.—After launching the second phase of its dealer development program three months ago, Isuzu Truck of America has now signed 165 dealers in 39 states.

Steve Allen, vice president and general manager of Isuzu Truck, said the company is more than halfway toward its goal of 260 dealers in 49 states by the end of the year.

He attributed dealer interest in part to the NPR, the turbocharged Class 3 truck which Isuzu introduced in April, 1985.

The NPR diesel one-ton city delivery truck is a successor to the KS22, the first vehicle introduction after Isuzu's American truck unit was formed in 1984 as a subsidiary of Isuzu Motors, Ltd., Tokyo.

Chevrolet and GMC will retail the same vehicle under their Tiltmaster and Forward names. GMC, by comparison with Isuzu, will have 200 dealers handling its medium-duty product line, which includes the low-cab-forward (LCF) W4 and forthcoming W7 forward models from Isuzu (see accompanying story).

Allen said Isuzu is offering dealers prompt truck delivery through its five ports of entry—Baltimore; Jacksonville, Fla.; Tacoma, Wash.; Long Beach, and Honolulu.

Headquartered in South El Monte, Calif., Isuzu Truck's four regional offices are in Dallas, which serves the Central U.S.; Norcross, Ga., Southeast; Allentown, Pa., Northeast, and City of Industry, Calif., West.

Allen said Isuzu's "parts service level," the industry measure of a parts distribution network's effectiveness, has averaged 96.4 percent during the past 18 months.

Targeting small business owners, larger fleet owners and corporate decision-makers, the company has undertaken a substantial advertising and merchandising effort to promote the growth of both Isuzu Truck and its dealers.

Just-in-time delivery

Combining a sophisticated computer-based information management system and state-of-the-art trucks, Skyway Systems, Inc., Santa Cruz, Calif., is offering overnight trucking delivery service with a fleet of 200 short-haul and long-haul trucks. The service helps California manufacturers increase production efficiency, while cutting shipping costs 10 to 15 percent, according to Skyway Systems.

Profitable dealer sells big-ticket rigs off lot

By Arthur Flax
Assistant Truck Editor

Auto dealers work in a consumer market. Customers buy cars because they like the way they look or perform. And they often buy them right off the lot.

But how about heavy-truck dealers? A heavy truck is a specialized piece of merchandise, often special-ordered from the factory by the customer.

But it can be three or four months from the time a new rig is ordered until it is delivered. And some customers need trucks immediately. A truck is a tool, and if the workman—that is, the owner—needs another implement to earn his daily bread, he may not be able to wait.

So how can a truck dealer anticipate the marketplace and order what the customer will demand?

Eastern Michigan Truck Sales, a small Freightliner/Mercedes-Benz truck dealership in Warren, Mich., tries to stock one piece for every market—owner-operator, fleet customer, long-haul, etc.—according to Terry Drosz, general sales manager. The dealership tries to stock about 12 new Freightliners, 10 to 15 used trucks and four or five Mercedes trucks.

Robert M. Blinstrub, president and an owner, claims the dealership has been profitable for the two years it has been in operation.

Owner-operators, because they buy in ones and twos, would seem to be the best bets to buy trucks right off the lot. Fleets, it stands to reason, would be more inclined to special-order a group of trucks.

But EMTS, Drosz said, has also been successful in selling fleet trucks off the lot.

"We stock fleet trucks, sometimes with the type of fleet in

truck industry news

Light groups soar

Truck deliveries set records for July, year

July retail sales of new trucks in the U.S. set alltime records for the month and the year.

During July of this year, 439,729 trucks were sold in the U.S.,

Tables on Page 24

22.4 percent above the previous July record of 359,157 in 1978.

This year through July, a record 2,818,412 trucks were sold, 14.0 percent above the former peak of 2,472,365 through July, 1978.

The sales counts are based on manufacturer's reports for light-duty sales and MVMA preliminary reports of medium and heavy-duty deliveries. The MVMA reports are broken down into class segments.

In the first seven months of this year, 2,651,472 light, Class 1-3, trucks were sold, up 15.7 percent from the 2,291,893 reported a year-earlier.

In the medium-duty, Class 4-6, segment, 32,335 sales were reported in 1985, down 4.61 percent from the 33,896 reported a year-earlier.

The MVMA did not report any sales in Class 4 in either 1985 or 1984.

In Class 5, 2,847 sales were reported in 1985, up 12.5 percent from the 2,531 reported in 1984.

In Class 6, 29,488 sales were tallied in 1985, down 6.0 percent from the 31,365 sales reported a year earlier.

In the heavy segment, Class 7-8, 134,605 sales were counted in 1985, up 9.3 percent from the year-earlier 123,126 sales.

Class 7 sales totaled 53,099 units for the current year, up 16.9 percent from the year-earlier 45,413 sales.

Class 8 sales totaled 81,506 units, up 4.9 percent from the year-earlier 77,713.

During July, 415,664 light-duty sales were tallied, up 29.72 percent from the year-earlier 320,423.

In the medium-duty segment, 5,025 sales were reported in July, down 28.1 percent from the 6,984 reported a year earlier.

In Class 5, 609 sales were tallied in July, 1985, down 31.2 percent from 885 a year earlier.

In Class 6, 4,416 sales were counted in July 1985, down 27.6 percent from 6,099 last year.

In the heavy-duty segment, the July total of 19,040 sales was down 4.46 percent from 19,928 in

Please turn to Page 24, Col. 3

First-half total tops 2.2 million

6-month registrations set record

The industry continued its winning ways as truck registrations through June set an alltime record.

According to R.L. Polk & Co., 2,257,495 trucks were registered

Tables on Page 26

in the January-through-June period, up 15.15 percent from the previous record of 1,960,557 registered in the year-earlier period.

During June, 1985, 399,184 trucks were registered, compared with 363,152 registrations in June, 1984.

In the light group, Classes 1-3, 2,118,582 trucks were registered through June, 1985, up 14.5 percent from the 1,849,594 units tallied a year earlier.

Of the 1985 light-truck total, 409,527 units, or 19.3 percent, were imports. The imported light-truck total was up 28.5 percent from the 318,635 units registered through June, 1984. Last year, through June, imported trucks accounted for 17.2 percent of all light trucks.

In Class 1, a total of 1,460,468 trucks were registered through June, 1985, up 39.4 percent from 1,047,821 a year earlier.

In Class 2, the total was 639,943 through June, 1985, down 18.1 percent from the 781,714 trucks counted in the year-earlier period.

In Class 3, a total of 18,171 units were registered through June, 1985, down 9.4 percent from the year-earlier count of 20,059.

Medium-duty trucks registered through June, 1985, totaled 29,953, up 33.7 percent from the

John D. Withrow, executive vice president, received 15 indirect shares through a company plan, his total indirect holdings. He also had 18,754 direct shares at the end of the reporting period.

Frederick W. Zuckerman, vice president, received 17 indirect shares through a company plan. His holdings total 17,408 direct and 90 indirect shares.

Ford Motor Co.

In a late filing, William Clay Ford, vice chairman, disposed of 3,464 direct shares by giving them as a gift and acquired 1,077 indirect shares. His holdings totaled 1,846,815 direct shares and 59,106 indirect shares at the end of the June.

Allan C. Gilmour, vice president, exercised options on 4,743 direct shares, his total holdings.

Sidney Kelly, corporate secretary, sold 514 direct shares, bringing his total holdings to 1,420 direct and 150 indirect shares.

Henry R. Nolte Jr., vice president, acquired 10,908 direct shares, bringing his total holdings to 15,908 direct shares.

Donald E. Petersen, chairman, exercised options on 2,371 direct shares, bringing his total holdings to 18,042 direct shares.

Lewis C. Veraldi, vice president, disposed of 4,840 direct shares, leaving him with 4,840 direct shares.

The savings and stock investment plan received 11,796 direct shares and sold 22,423 direct shares during the period for total holdings of 118,308 direct shares.

General Motors

John D. Debbink, vice president, acquired 1,342 direct and 514 indirect shares through a company plan, according to amended filings. He disposed of 3,308 shares. His holdings amount to 5,245 direct and 5,060 indirect shares.

Charles T. Fisher III, a director, acquired 28 direct and 361 indirect shares, pushing his total holdings to 568 direct and 7,233 indirect shares.

John O. Grettenberger, vice president, received 2,387 direct shares by exercising options or accruing them through a company plan, according to an amended filing. He also disposed of 704 direct shares. His total holdings were 2,975 direct shares and 459 indirect shares.

Courtney F. Jones, treasurer, sold 1,260 direct shares, leaving his holdings at 272 indirect shares.

Charles Katko, vice president, exercised options on 2,610 direct shares, bringing his total holdings to 17,048 direct and 1,841 indirect shares.

Ludvik F. Koci, vice president, sold 707 direct shares for total holdings of 1,360 direct and 825 indirect shares.

Donald McPherson, vice president, sold 5,000 direct shares, leaving him with 12,785 direct and 5,370 indirect shares.

Robert T. O'Connell, vice president, obtained 33 direct shares through a company plan, his total holdings.

David S. Potter, vice president, sold 1,630 direct shares, bringing his holdings to 3,797 direct and 879 indirect shares, according to a late filing.

In another late filing, John F. Smith Jr., vice president, obtained 707 direct shares through a company plan. His holdings amount to 4,740 direct and 1,106 indirect shares.

In a late filing, Robert B. Stone, vice president, sold 883 direct shares. His holdings amount to 1,353 direct and 171 indirect shares.

James G. Vorhes, vice president, acquired 1,458 direct shares, bringing his total holdings to 2,678 direct and 5,692 indirect shares.

Paul H. Zalecki, vice president, exercised options on 1,570 direct shares and acquired an additional 969 direct shares, bringing his holdings to 2,539 direct and 763 indirect shares.

Truck deliveries set records for July and year

Continued from Page 14

July 1984.

Class 7 sales for July totaled 7,931, up 3.0 percent from the year-earlier 7,703 sales.

Class 8 sales for July totaled 11,109, down 9.1 percent from the year-earlier 12,225 sales.

Chevrolet regained the lead in truck sales from Ford during July. For the month, Chevrolet's 120,449 light and medium-duty truck sales topped Ford's 111,578 sales.

Chevrolet also recaptured the year-to-date truck sales lead it lost last in June. Through July, 1985, Chevrolet sold 777,822 trucks compared with 771,766 for Ford.

Chrysler reported that its sales of 55,071 trucks during July set a record for the month. The previous record was 53,986 in July, 1978.

SHOWROOM PROFITS

Cover illustration by John Regalski.

Cash registers keep jingling at dealerships

Mood is optimistic for the rest of 1985

By Colleen Belli
Assistant Industry Editor

Americans love to shop. And when it comes to buying new cars and trucks, they like to visit dealer showrooms to look over the styles, colors and optional extras — just like shopping for new clothes in a department store.

When the economy is good and car sales are up, Americans tend to load their vehicles to the hilt with comfort and convenience items. Today there is a myriad of choices including fancy radios, high-tech electronic gadgetry, upgraded interiors, sophisticated color schemes, power equipment galore and engines of all shapes and sizes.

For new-car sales people, these option opportunities add up to increased profits for themselves and their dealerships.

With auto sales on the upswing in 1985 for the third consecutive year, a random sampling of dealers by Automotive News indicates that sales of optional equipment are also climbing.

In addition, dealership profitability is up and dealer optimism for the future is high, according to NADA.

Typical of the dealers interviewed, Bill Hager, owner of Des Plaines Chrysler-Plymouth, outside Chicago, stated, "The public is in a buying mood. We very seldom get a party walking in wanting a stripped-down model. The after-sale is a very intricate part of the business."

The Des Plaines, Ill., dealer added, "My outlook for the rest of the year — if the truck (transporters) strike is solved soon and deliveries can be made — is excellent. The truck strike could cause problems; any strike could cause problems." His dealership retails 1,200 to 1,400 new cars a year.

Among his top after-sale items are service contracts and rustproofing. He said service contracts are not only a high-profit item, but are an "insurance policy" for the buyer against increased repair costs in the future.

"We sell only Chrysler warranties on new and used cars. We sell over 60 percent, some months as high as 77 or 80 percent of our sales with warranties. It is a good profit item, but it's also a money saver (for the customer)," Hager said.

"We sell primarily the top-of-the-line custom coverage. It's a little bit higher, but I've had customers come back and thank me," Hager said. At $495 for five-year coverage, the plan costs the customer $100 a year, or just a few

Please turn to Page E-2, Col. 1

Shopping

Continued from Page E-1

cents a day, he explained.

"We're in the rust belt, so we sell a lot of rustproofing and paint sealant. For rustproofing, we sell an amount equal to that of warranties but less than that for paint sealant — probably about 30 percent," he added.

Hager foresees a demand for cellular mobile telephones down the road, but right now his sales amount to only a handful every month. The dealership carries Motorola phones.

"I like my own. I think I receive more calls than I call out. We don't sell that many, but down the road it will sell. It's a convenience. People will demand it. People want things easy, and dealers are in the business of making things easy for people," Hager said.

According to Steve Couey, general sales manager of Northgate Lincoln-Mercury, Tampa, Fla., "Things are excellent. The market in the Tampa area is very strong. We are even breaking last year's performance which was a record. July was our second-best volume month ever for new-car sales and total units."

In 1984 the Tampa dealership sold 3,850 new cars. "We're already at 3,200 through seven months of '85. We're going to break that," Couey said.

For Northgate, the top after-sale items are the Ford Extended Service Plan and Ford Super Seal rustproofing. These items are handled by the dealership's business office rather than the sales staff.

Northgate customers also like optional equipment, buying their cars heavily loaded. "With few exceptions, people don't want stripped-down cars, particularly if they're looking at Lincoln-Mercury cars," he pointed out.

Among the Tampa dealership's top options is the L-M Value Option Program, a group of extras including cruise control, tilt steering-wheel, rear-window defroster and upgraded radio sold at a discount price.

"Ninety percent of our cars are equipped with special value packages. Actually, you create a car that is not very marketable without that value package," Couey explained. "It enables us to position our customers against the competition more effectively and it enhances the marketablity of the car."

Northgate pushes some outside equipment, too. "We sell simulated convertible tops and different roof treatments from American Sunroof. These are good profit boosters for us," Couey added.

The sharp recovery in new-unit sales from the downturn of 1980-82 has allowed dealership profitability to return to more normal levels.

Statistics compiled by NADA's Industry Analysis Division show that for the first five months of 1985, dealer net profit before taxes, as a percent of total sales, was 2.5 percent. This compares with 3.0 percent for the first five months of last year and 2.18 percent for all of 1984. The record high of 3.5 percent was set back in 1952.

Dealership profitability as measured by return on investment has also shown tremendous gains, especially if the cost of money is considered, NADA added. Deducting the average yield on one-year treasury bills from the dealer's net profit before tax, as a percent of net worth, shows that in 1980 the average dealer had a negative return. In 1984 this measure of profitability reached its highest level ever.

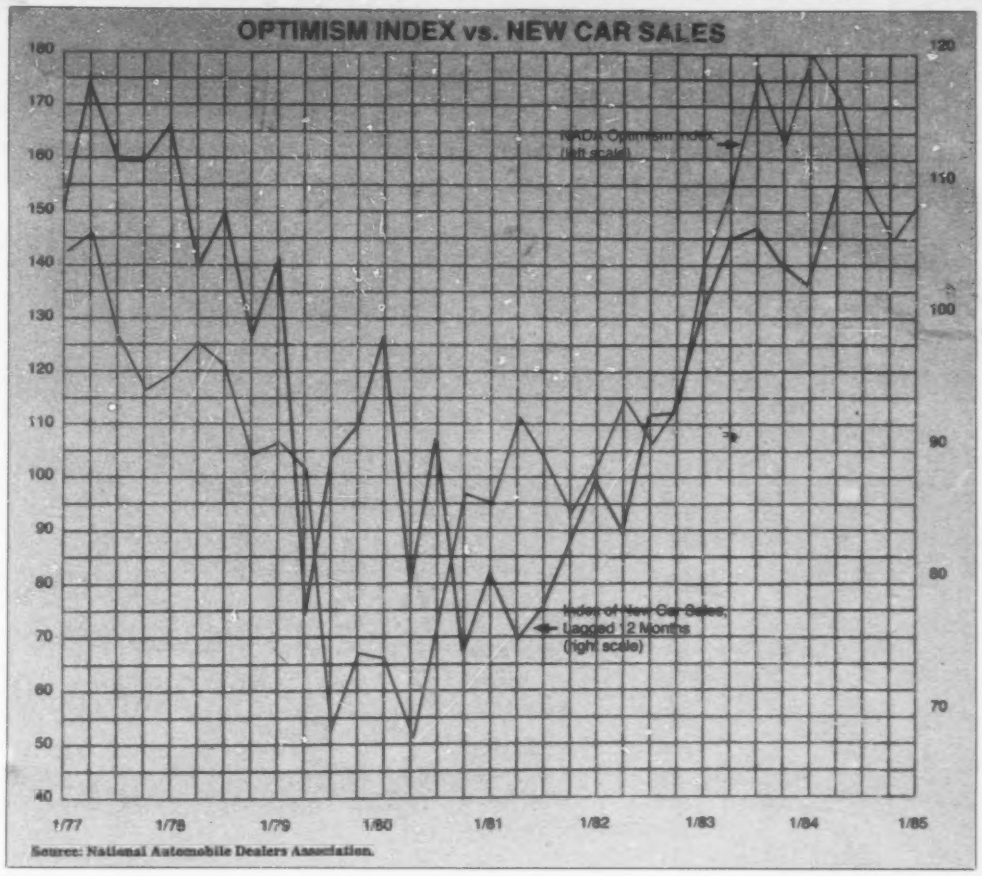
In 1984, both gross and expense as a percent of sales declined for the fourth consecutive year. The trend has been for dealerships to become increasingly large businesses that operate on increasingly thin margins, NADA said.

Representative of major expenses for the average dealership in 1984 were: Total payroll, $623,000; advertising, $88,500; rent and equivalent, $80,200, and floor plan interest, $60,600, according the dealer group.

What may be more important in the outlook is that dealer optimism is bright. For the past eight years, NADA has conducted a quarterly survey of the profit expectations of new car and truck dealers for the succeeding 12 months. The survey results have closely matched dealers' actual profit experience and also serve as a barometer of national economic trends, NADA said.

At the beginning of 1985, the NADA Optimism Index stood at a level of 151 — considerably less than its peak of 180 which was reached in January of last year, but is still high by historical standards.

Throughout 1981 and 1982, when many industry analysts were constantly predicting an imminent turnaround in new vehicle sales, dealers displayed no significant increase in optimism. In retrospect, it can be noted that the low level of dealer optimism was well-founded.



The NADA Optimism Index began its most recent rise in early 1983 and, subsequently, new-car sales began to improve. The current high level of dealer optimism indicates that dealers believe the motor vehicle industry's recovery will continue at a modest pace throughout 1985.

•Factory pre-tax profit margins for the domestic makers climbed to 7.0 percent in 1984, up from 5.97 percent in 1983, marking the best performance since 1978. For the first six months of 1985, factory pre-tax profits were 5.3 percent.

The increased factory profit margin is also a sharp contrast from three loss years — 1980-81-82 — when no profits were made.

While in the strictest sense it is not comparing apples to apples, the difference in factory and dealer pre-tax margins is noteworthy.

Dealers recorded a pre-tax margin of 2.18 percent in 1984, which was less than half of the 7.0 percent made by the factory. A year earlier, the picture was 2.14 percent for dealers and 5.97 percent for the factory.

While low profits were recorded in the three preceding years, the situation was unique in that dealers were ahead of the factory. Dealer pre-tax profits were 0.61 percent in 1980, 1.16 percent in 1981 and 1.30 percent in 1982, while the factory recorded a loss in each of those years.

Presently, the factory margin for the first six months of 1985 is 5.3 percent compared to the dealer pre-tax profit of 2.5 percent for the first five months of the year.

•NADA also reported that the continued recovery in sales in 1984 resulted in an advance in the new-vehicle department's share of total dealership sales. The share was 65.4 percent, up from 63.4 percent in 1983.

Although both the used vehicle and the service and parts departments accounted for smaller shares of total dealership sales in 1984, both had dollar sales increases in excess of 14 percent.

In 1984 the used-vehicle department accounted for 21.3 percent of total dealership sales, down from 22.5 percent in 1983. The service and parts department represented 13.3 percent in 1984 compared with 14.1 percent in 1983.

NADA said all dealership departments had increases in the actual unit volume of work performed last year. The average dealership had a 17 percent increase in new-unit sales.

Used-unit sales increased 11 percent and the total number of repair orders performed by the average dealership increased 7 percent.

Selling cars from the inside out

Radios are the crude oil of the late 1980s

By Arthur Flax
Assistant Truck Editor

A few years ago exotic car audio equipment was almost exclusively the domain of the aftermarket.

The aftermarket offered high power amplifiers, digital tuning, graphic equalizers and better speakers. The car buying public became aware of quality systems.

Auto makers have picked up on consumer demand for quality sound and now offer premium sound systems that compete with aftermarket units. Higher quality radio equipment is now standard in many car lines.

Following the success of the Delco Bose acoustically tuned stereo system in premium General Motors cars, a number of manufacturers are offering units that are tuned to the shape of their car interiors.

This year General Motors is expanding the number of vehicles it offers with the Delco Bose unit; AMC has teamed with Jenson to offer an acoustically tuned system; Ford will continue to offer its multi-speaker premium sound system, and Chrysler will continue to offer its five- and six-speaker Ultimate sound system.

Al Mattaliano, assistant general sales manager for Delco Electronics, said, "This is the year dealers will want to sell cars from the inside out."

Delco, he said, believes dealers can get buyers into cars with impressive electronics. "We like to say electronics are the crude oil of the late 80's."

This year, GM will offer the Delco Bose system in 13 models. New car lines that will have the Delco Bose system in 1986 are the Buick Somerset and LeSabre, Oldsmobile Calais and Delta 88 and Cadillac Cimarron.

Also new on 1986 GM cars are controls for stereo systems. Pontiac, for example, will offer sound system controls on the steering wheels.

Buick Riviera will be offered with a touch sensitive TV screen that controls the radio, climate control, trip computer and diagnostic functions.

The Buick Graphic Control Center could be the wave of the future, Mattaliano said. The screen controls over 90 functions and is arranged like a book. A summary page with a touch sensitive index, or menu, directs the driver to the device he or she wishes to control. A familiar reproduction of the device then appears on the screen (for example a picture of a radio) and controls can be adjusted by touching the appropriate areas.

Another electronic marvel in the future is the compact digital disk system which provides extremely accurate sound reproduction.

Mattaliano said Delco is working on digital disk car systems and "will be ready for the market when it explodes." Delco will not have a system for '86, but has one working in pilot cars.

In the 1986 model year, he predicted 70,000 compact disk units will be sold for cars. That number should increase as will the number of recordings available for the units.

Currently, digital disk is only available from Sony and Pioneer on the aftermarket, but a number of other audio equipment makers are working on systems. At least one auto maker is rumored to have a system ready for introduction in the 1986 model year.

Michael Williams, senior administrator in marketing for Delco said, "Dealers should be aware of and ready to pounce on the demand for digital disk. There is a tremendous opportunity here for shrewd dealers."

Another trend is the demand for upgraded speaker systems. He said 90 percent of GM cars are available with optional upgraded speakers this year.

Don Duncan, manager of planning, marketing and sales of Ford's Electrical and Electronics Division, noted that 1985 is the 60th anniversary of car stereo, but most of the developments in premium units occurred in the last 20 years.

The first AM/FM car radio was installed in 1963. It wasn't until the late '70's that car makers started to design systems specifically for individual car interiors.

He credited the Delco Bose advertising for popularizing high end stereo systems and predicted increased numbers of specialized stereo systems on the market. In fact, he said Ford recently entered into a venture with JBL Inc. to better develop high end sound systems.

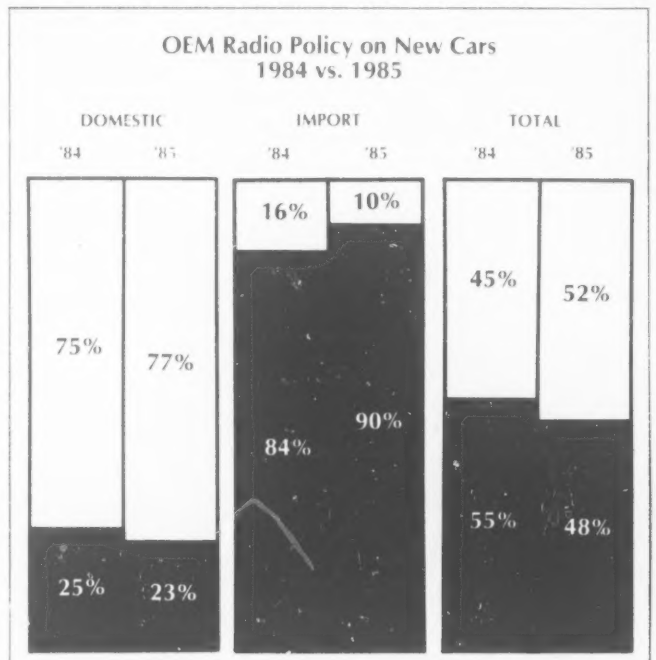
Ford's current top of the line system is its Premium sound package with multiple speakers and a separate power amplifier. Ford also offers a Value Option Package that includes a premium sound system.

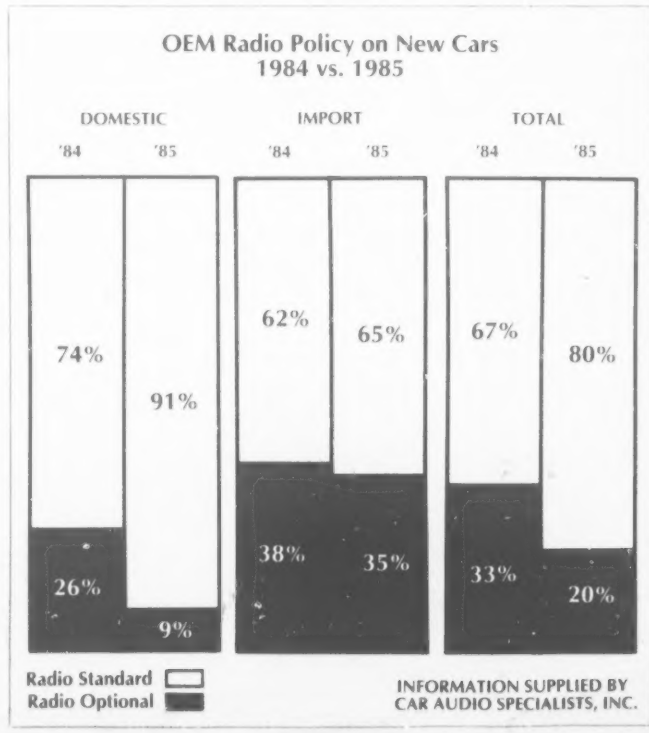
In the 1980 model year, Duncan said, only 32 percent of Ford products had stereo sound units. In 1985, year-to-date, he said 82 percent had stereo units and of those stereos, 42 percent have cassette systems.

Cassette systems, he noted, are more popular with younger customers. Luxury car owners prefer high end stereos without cassette decks. He said 75 percent of LTD's are purchased with AM/FM stereos without cassettes.

AMC's hot sound system for 1986 is its Accusound unit by Jenson. According to an AMC spokesman, Accusound is an electronic search and tune, AM/FM cassette stereo with a graphic equalizer.

Please turn to Page E-12, Col. 1





Radios

Continued from Page E-10

Jenson and AMC worked together to place the speakers in the car for best acoustic performance.

Accusound will be standard on the Grand Wagoneer with four speakers, and will be offered as an option on the Alliance and Encore with six speakers. The Jeep line will also get Accusound.

The premium Accusound system, the spokesman noted, will be featured in print advertising and catalogs. Accusound is not cheap. On an Alliance it costs $614, compared with $357 for an AM/FM cassette with four speakers.

Chrysler will offer its Ultimate sound system for the third year. Available on most models including subcompacts, Ultimate sound is a five- or six-speaker AM stereo/FM stereo, cassette unit. All Chrysler radios feature digital tuning with clocks.

A number of manufacturers, including Ford and GM, offer AM stereo, but that broadcast mode has not gained the popularity once predicted. Several experts in the field reported that much of the material currently broadcast on AM stations (news, sports, talk shows and such) does not benefit much from the added fidelity of stereo.

Volkswagen will carry over most of its 1985 sound equipment into 1986, according to Joseph Turkel, parts merchandising manager. Of domestic VW's, he said 30 to 35 percent are ordered with a factory radio and one half of those include cassettes.

Volkswagen also has an active aftermarket program designed to give the customer a choice of dealer installed Volkswagen or independent aftermarket sound systems. VW's, according to Turkel, can be ordered from the factory with speakers and an antenna, but no radio. The speaker preparation retails for $140 to $185 and VW radios range from $230 to $610. The pricy unit is built for VW by Blaupunkt.

A dealer with a good installation person, Turkel noted, might be able to make more money with aftermarket units (either VW or independent). "It's probably a wash, labor rates being what they are."

"It doesn't hurt to have a factory system to help sell the car," he added.

However, Cheryl Hollins, executive director of the Car Audio Specialists Assn., said dealers can increase profits with aftermarket systems. She said dealers can use aftermarket dealers as a warehouse to stock alternative sound systems.

The aftermarket also continues to provide the latest in new technology—currently the compact digital disk systems.

But on new cars, the aftermarket is losing ground to original equipment radios as more cars are offered with standard radios and fewer cars are available with deletable radios (see graph).

Following up after the sale

A simple thank-you goes a long way

By Matt DeLorenzo
Los Angeles Reporter

What two words do all car buyers like to hear but only half the new car dealers bother to say? According to David Reiss of the Gift Connection in Encino, Calif., it's a simple thank you for spending $10,000.

Simple as it may seem, Reiss feels that saying thank you is not only a common courtesy but a powerful marketing tool that can lock in a loyal customer and generate valuable leads for new customers.

"When you do it, people don't forget. It creates goodwill, generates positive word of mouth and you're creating a satisfied customer," Reiss said. The idea of sending a thank-you gift to a customer is not new. Many dealers already do, but how the thank you is handled and the information that a dealer can obtain from customer responses is the key to Reiss' operation.

The gift itself is very important, but it's not the heart of his business, Reiss stressed. "We're a marketing house, we're not a premium house or a front for some jelly bean manufacturer," he said. "If we send a gift, we send the most effective gift. Some send liquor, flowers or key chains. We give a gift (imported Danish butter cookies) that has high recognition and is classy. It's a gift that can be shared by everyone. They also save the tin and it's a constant reminder."

Along with the cookies, which are delivered via UPS, are a thank-you-card and a response card. The thank-you card is personalized with the dealer's logo and is printed on French linen stock. The response card is addressed and stamped and asks the buyer how he was treated, if the car was delivered to his satisfaction and how he heard about the dealership. It also asks for names of referrals and any comments on how the dealership can improve its service.

Reiss said dealers sending the thank-you gifts have gotten responses from 75 to 85 percent of their buyers. Five months later, a second response-referral card is sent. Reiss said his company is the only one that offers the second mailing. Gift Connection charges the dealer $10 per unit, which includes cookies, thank-you card and return postage on the response cards.

There is no contract and the company guarantees to keep the dealer's mailing list private. Buyers usually get the thank-you within two weeks of their purchase.

Through the response card, dealers, "Learn what they're doing right and what they're doing wrong," Reiss said. Several suggestions have been adopted. One dealer put games and toys for children in the service waiting lounge. Another takes all the credit information for checks when writing the estimate. When the work is completed, the customer simply writes the check and doesn't have to wait for approval.

Reiss has also developed sales training videotapes on post-sale follow-up that he provides to clients at no charge. "I've been in sales training for quite some time and have experience in follow-up product marketing," Reiss said. "Most sales training stops after the sale is made."

The tapes show dealership personnel the value of following up on the sale, how to prospect for referrals, taking care of the customer on his first service visit and other techniques to increase customer satisfaction.

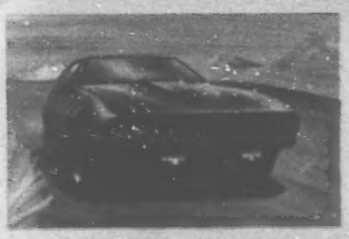
Reiss said that most buyers choose the place they buy for one reason—price. That is how they will buy their next car if the dealer doesn't do any work after the sale. "They are less likely to shop around if they've built an allegiance to a dealership, if they perceive that you are the good guy," he added.

Reiss started his business four and half years ago selling the thank-you gifts to computer stores. Little more than a year ago, he moved into the automotive field and now nearly 95 percent of his business is automotive.

Knowledgeable Customers Are Quick To Recognize A Dealer That Installs The Best Auxiliary Lighting Systems.

KC HiLiTES has a full line of highway approved auxiliary driving & fog lighting systems that are easily & profitably installed on sports coupes, 4X4's, RV's, commercial vehicles and light trucks; and they all feature unbreakable LEXAN® lenses. There are rectangular black space-age nylon composite housings that look like OE on today's performance cars and the popular round chrome KC's that bolt right on light bars. No extras to buy; everything is included and the universal mounting brackets make it easy and quick to install KC HiLiTES right in your new car make-ready department.

Pre-sold with color ads in SPORTS AFIELD, POPULAR MECHANICS, TRAILER LIFE and 4 WHEEL & OFF ROAD, KC HiLiTES are not only a familiar brand name to your customers, but they're the acknowledged leader in auxiliary lighting systems. And, they're so technologically advanced, they carry a factory-direct 5 YEAR WARRANTY.



Call or write today for information on increasing your dealer-installed accessory margin with KC HiLiTES.

But trucks rise 32 pct.

Car sales in Canada decline 1 pct. for July

By Jenny L. King
Detroit Reporter

Sales of new North American-built passenger cars in Canada slipped below the year-ago level in July. The 1.07-percent loss was the first time since February that car sales failed to surpass their 1984 counterpart.

Truck sales painted a more cheerful picture, up for the seventh consecutive month of this year, with a 32.86-percent increase.

Year-to-date sales were up for both cars and trucks.

July new-car sales dipped 1.07 percent, to 58,700 from 59,332. General Motors was the only maker to report a gain, up 8.68 percent to 30,663 from 28,215. Ford sales of 13,169 passenger cars were down 3.84 percent from 13,695. Chrysler was down 6.56 percent, to 12,368 from 13,236.

American Motors tumbled 49.01 percent, to 1,697 from 3,328 (including 588 imported Renaults this year versus 1,399 in 1984). Volvo reported sales of 803 units, off 6.41 percent from 858.

GM's share of the new-car market climbed to 52.24 percent from 47.55 percent. Ford slipped to 22.43 percent from 23.08 percent. Chrysler's 21.07 percent was down from 22.31 percent. AMC dropped to 2.89 percent from 5.61 percent, and Volvo slipped to 1.37 percent from 1.45 percent.

Car sales through July totaled 497,763, up 6.80 percent from 466,071.

Truck sales in July totaled 26,569, up 32.86 percent from 19,997 a year earlier. All four major truck makers enjoyed sales increases for the month, with Chrysler reporting a July record of 5,337, up 57.76 percent from 3,383.

GM truck sales jumped 31.35 percent, to 11,632 from 8,856. Ford was up 23.61 percent, to 8,816 from 7,132, and AMC Jeep sales of 784 were up 20.15 percent from 626.

Chrysler earned 20.09 percent of the July truck market, up from 16.92 percent in 1984. Ford dropped to 33.18 percent from 35.66 percent. GM was down to 43.78 percent from 44.29 percent. Jeeps took 2.95 percent of the market, down from 3.13 percent.

Truck sales, including captive imports, were up 23.44 percent for the first seven months, climbing to 196,822 from 159,445.

Registrations highest ever for first half

Continued from Page 14

year-earlier 22,397.

In Class 4, the count was 468 registrations through June, 1985, up 42.3 percent from the 329 trucks registered a year earlier. All Class 4 trucks were imports.

In Class 5, 3,384 trucks were registered, up 208.5 percent from 1,097 a year earlier.

In Class 6, 26,101 trucks were registered, up 24.5 percent from 20,971 through June, 1984.

Ford, which captured the lead in the heavy segment from International a month earlier, continued to lead that group with 23,210 tallies, compared with International's 22,867.

International, however, has a firm lead in the Class 8 group with 15,047 registrations to Ford's 7,345. Ford leads the Class 7 group with 15,865 to IH's 7,820.

Also, Mack took over third place in the heavy segment from GMC. Mack's 13,834 registrations through June, 1985, marked a gain of 2.21 percentage points in market share over its 9,287 tallies during the year-earlier period.

Overall, 108,960 units were registered in the heavy group through June, 1985, 23.0 percent above the 88,566 counted through June, 1984.

In Class 7, a total of 38,598 units were registered through June, 1985, up 27.8 percent from the year-earlier period.

In Class 8, 70,362 registrations were counted through June, 1985, up 20.5 percent from the 58,370 units tallied through June, 1984.

Chrysler ordered to pay $3 million in Volare crash

WEST PALM BEACH.—A Florida appeals court has ordered Chrysler Corp. to pay $3 million to the husband of a woman who died in a fiery car crash in 1977.

The appeals court said that Broward Circuit Judge Otis Farrington had erred when he overruled a jury's decision to require Chrysler to pay Jack Wolmer the $3 million in punitive damages.

Chrysler lawyers said through a spokesman that they were exploring a possible appeal.

In writing the decision of the Fourth District Court of Appeal, Judge Daniel Hurley said he agreed with the jury that found Chrysler had acted "with wantonness, willfulness or reckless indifference to the rights of others" when it designed the 1977 Plymouth Volare station wagon.

Evidence presented during the 1982 trial showed that Mary Wolmer was driving in her Volare wagon with two friends on Interstate 95 from Miami to Fort Lauderdale when they had to stop in the middle of the highway because of a disabled vehicle.

A pickup truck traveling 50 MPH hit Wolmer's car in the rear, and it burst into flames. Wolmer's two friends, who were in the front seat, escaped by climbing out a window, but Wolmer, engulfed in flames, died instantly.

A witness said he "saw a large ball of flame shoot up in the air, similar to when (he) worked the flamethrower in the Army."

Hurley wrote that two expert witnesses testifying for the family said the car had defects that "imperiled life and limb," defects that Chrysler knew about.

The witnesses said that in rear-end collisions, the car's fuel tank is pushed forward into the shock absorber, causing it to rupture. In addition, the tube leading to the fuel tank is pulled out by the car's outer panels, spraying gasoline around.

The plaintiff presented Chrysler records showing how the vehicle performed in simulated rear-end collisions at 30 MPH—thus indicating that Chrysler knew about the design flaws.

"Test reports revealed contact problems between the fuel tank and shock absorber. Also, there were problems of fuel leakage from the filler tube," Hurley wrote.

"The reports evidenced Chrysler's actual knowledge of both problems," Hurley wrote.

However, Chrysler told the judge that the 1977 Volare station wagon met Federal Government safety standards and that state law cannot preempt federal regulations.

In the decision that was overturned by the appeals court, Judge Farrington agreed with Chrysler, overruling the jury.

Buick dealers to visit Flint for 1986 model preview

FLINT.—More than 4,600 Buick dealers, sales and service personnel and other guests from across the country will take part in Buick's "hometown celebration"—a series of five new-car announcement meetings in Flint between Aug. 19 and Sept. 6.

The dealers and others will arrive in five groups of about 950 people each for three-day meetings to preview Buick's 1986 models. They also will visit Flint's Six Flags AutoWorld and the Sloan Museum.

They will tour the new $300-million-plus Buick City assembly facility where new front-wheel-drive Buick LeSabres are to be built beginning in September.

They will be entertained at a Broadway-style show with a Buick theme at Whiting Auditorium their first evening in Flint. The second night, they will attend a dinner at the Flint Hyatt Regency featuring comedienne Phyllis Diller and comedian Freddie Roman.

The dealers will attend seminars, including one on the women's market and another on a new computerized automotive maintenance system. On one afternoon, they will watch a demonstration of Buick's Anti-lock Braking System, events featuring some Buick-powered drag racing cars and other motorsports demonstrations. All events will be repeated five times to accommodate each group.

The theme of the announcement meetings is "Partners in Innovation," which the division said refers to the "partnership between the factory and the dealers and the Buick tradition in Flint."

Law cracks down on rollbacks

BOSTON.—A new Massachusetts law will emphasize stronger control over odometer rollbacks by auto dealers.

The state Registry of Motor Vehicles said that "odometer spinning" costs consumers $2 billion a year across the U.S. Registry spokesmen said that wholesalers and dealers are the major offenders, rather than individuals selling cars on an informal basis.

Heretofore in Massachusetts, odometer rollback charges have been tried on a civil court level. The new law allows prosecution in criminal court.

Anglo American offers Odometer Protection Plan

BLOOMFIELD HILLS, Mich.—Anglo American's Odometer Protection Plan is now included on all consigned cars sold with declared warranty mileage at 11 of its auto auction subsidiaries in the U.S.

William P. Benton, chairman of Anglo American Auto Auctions, Inc., said the plan is a major step to remove the risk of odometer fraud in auto auctions.

"The auctions have worked with Auction Insurance Agency to develop an innovative approach known as the AccuSafe Odometer Protection Plan," Benton said. "For some time, auction owners have been concerned with automobiles having rolled-back odometers.

"Under the AccuSafe plan, the buyer is protected by specific indemnity agreement from the auction which outlines the terms and conditions and provides protection up to 150 days. Specific terms can be varied to meet the special needs of individual auctions."

The protection issued by the auction is backed by an insurance policy written by Georgia Casualty and Surety Co. through Auction Insurance Agency. For 30 years, Auction Insurance Agency has provided check and title insurance services to the auction industry.

And strike cuts truck supply to 20

Import-car stocks dip to 29 days

Continued from Page 1

This means that on average, import dealers had perhaps only 20 days' worth of cars on their lots when the Teamsters went out on strike at the end of July.

Inventory figures show the shortages were most acute among Japanese-car dealers, although the supply of German-built cars dropped sharply.

In fact, Toyota said its latest report shows it has only a three-day supply of cars at dealers, in dealer prep centers and in transit, down from 12 days on Aug. 1. Like most importers, it doesn't count in its inventory cars that are waiting dockside, until it takes official receipt.

This month's car stockpile of 291,871, is lower than the month-earlier total of 310,221, but well above the year-earlier total of 197,688, when tighter Japanese quotas were in effect. The Aug. 1 days-supply figure of 29 days compares with the month-earlier figure of 31 and the year-earlier figure of 24.

The real shortages, as noted, are in imported trucks (including Nissan's Tennessee trucks). The truck inventory of 74,720 was a 14-month low—lowest since May 1, 1984, when there were 46,511 trucks in stock. In contrast to the Aug. 1, 1985, figure, on July 1, there were 94,705 trucks in inventory. And on Aug. 1, 1984, there were 86,785.

And import-truck dealers were selling like crazy during July, leaving little left for August: The Aug. 1 stockpile was worth only 20 days, compared with 36 days a month earlier and 39 days a year earlier. Truck days-supply figures haven't dropped so low since Automotive News began tracking them in mid-1981. The lowest it ever got was a 30-day supply, on Sept. 1, 1983.

Isuzu sliced its truck days-supply figure by about two-thirds through a combination of increased sales and sharply decreased inventories.

Toyota's inventories were decreased, too, but its truck sales jumped tremendously. Truck sales also were up for Nissan and Chrysler Corp.'s Dodge Ram 50 import. The remaining truck importers—Mazda and Mitsubishi—suffered sales declines because they didn't have enough trucks to sell during the month.

In the car segment, dased days-supply figures for Mitsubishi, BMW and Ford Motor Co.'s Merkur were due more to decreased shipments than to any sales-rate changes. Audi's big decrease in its days-supply figure was due to a combination of increased sales and decreased inventories.

By country of origin, the Aug. 1 car inventory was split this way: Japan, 58.22 percent; Germany, 29.35 percent; other countries, 12.43 percent. Unit counts were off in all three categories compared with a month earlier, when the split was Japan, 54.96 percent; Germany, 33.11 percent; other countries, 11.93 percent.

Combined import car and truck figures showed a 26-day supply on Aug. 1, the lowest since Sept. 1, 1984, when there was a 25-day import-vehicle supply. On July 1, there was a 32-day supply; on Aug. 1, 1984, it was 27.

The vehicle unit count this month amounted to 366,591, a three-month low. On July 1, it was 404,926; on Aug. 1, 1984, it was 284,473.

Japanese-car inventories averaged 21 days on Aug. 1: Isuzu, 92; Nissan, 26; Mazda, 23; Subaru, 22; Mitsubishi, 18; Toyota, 12, and Honda imports, 9. In addition, there was a 74-day supply of Chevrolet captive imports: A 79-day supply of the Isuzu-built Spectrum and a 62-day supply of the Suzuki-built Sprint.

There was a 42-day supply of Chrysler Corp. captives built by Mitsubishi: Dodge Conquest, 113; Plymouth Conquest, 104; Plymouth Colt, 44; Dodge Colt, 38; Dodge Vista, 33, and Plymouth Vista, 33.

The German-car days' supply averaged 57 days: Merkur, 117; VW imports, 66; BMW, 59; Porsche, 56; Audi, 51, and Mercedes-Benz, 40.

The days-supply average for cars from the other European countries averaged 49: Renault imports, 297; Peugeot, 77; Volvo, 41; Saab, 40; Jaguar, 25, and Alfa Romeo, 24.

Japanese light-duty trucks and their days-supply averages: Chrysler, 38; Nissan (including domestics), 35; Isuzu, 29; Mitsubishi, 15; Mazda and Toyota, each 12.

Just a whisker ahead of Fiat in first-half sales

VW Group snares lead in Europe

Continued from Page 1

market shares in practically every Fiat export market. Only the U.K., long a Fiat weakness, contributed any significant share increase.

Ford, the European market leader in 1984, fell by more than 9 percent in sales to finish the first half at 11.7 percent of the market.

That was a result of Ford's declared unpreparedness to defend its European leadership if it meant reducing margins. It also is because of the intensity of the competition, not least from GM's Opel and Vauxhall.

GM was still behind Ford at the end of June, but the difference was only about 5,000 units, or 0.1 percent of total sales. With the new Kadett/Astra at last reaching peak volumes—more than 2,500 a day—the second half of this year could see the long-expected reverse in position between GM and Ford.

Despite weak domestic demand, both French groups increased their overall market shares. PSA, led by Peugeot, was up 2.2 percent in sales and had a market share of 11.5 percent, while Renault recovered by 1.8 percent in overall sales and captured 10.8 percent of the market.

The continuing success of the Peugeot 205 and the arrival of the new Renault 5 were prime factors.

The combined market share of the Japanese makers rose from just under 10 percent to 10.5 percent.

Among the smaller-volume makers, the 19-percent rise in Mercedes-Benz sales was the outstanding feature. Mercedes-Benz made solid gains against the general trend in Germany—the only maker to do so—and pushed more cars into exports as well. The recent extension to its capacity (at Bremen) and the strong demand for all models means it continues to build at record numbers.

Similarly, Volvo made steady progress, but BMW suffered a setback in its market share. A serious fall in BMW's German business was not compensated for by greater European exports, although its U.K. business continued to improve.

However, BMW continues to talk optimistically of record production this year and seems confident of recovering its losses.

Early-August sales drop; shortage of cars hurts

Continued from Page 2

12 09 percent to 15.48 percent of the domestic market.

General Motors was down 10.01 percent, to 92,298 from 102,561. Ford Motor Co. dropped 12.36 percent, to 37,135 from 42,373.

Honda plunged to sales of 771 from 4,145 a year earlier, a drop of 81.40 percent. Volkswagen was down 14.89 percent, to 1,149 from 1,350. American Motors reported sales of 2,700 units, down 49.34 percent from 5,330, while Nissan had sales of 545 this year.

GM's share of the domestic market edged to 57.96 percent from 57.88 percent last year. Ford dipped to 23.32 percent from 23.92 percent. Chrysler catapulted to 15.48 percent from 12.09 percent.

VW was down to 0.72 percent from 0.76 percent. Honda had 0.48 percent, down from 2.34 percent a year earlier. AMC earned 1.70 percent, down from 3.01 percent, and Nissan had 0.34 percent its first early-August on the domestic market.

Plymouth and Dodge were the only U.S. makes with sales increases for the period. Plymouth climbed 37.66 percent, to 6,975 from 5,067. Dodge was up 41.97 percent, to 9,505 from 6,695.

Other results included Chrysler down 15.54 percent; Ford, down 11.46 percent; Mercury, down 12.88 percent; Lincoln, down 17.68 percent; Renault, down 50.00 percent, and AMC, down 39.39 percent.

Edsel Ford sees Sable matching sales of Taurus

Continued from Page 2

which Ford Division has, which is their price unit," he said.

"We don't have the image. We're trying valiantly with the Trans Am series, and we're going to win the series. But we're going to see if we can't do something. I don't know what the details are because we haven't formulated them yet, but I'd like to see if I can't just push Capri a little bit."

Ford said a notchback offering for Capri is not necessarily the answer.

"I've looked into that, and it's a function of cost because of the fenders," he said. "There are some fender issues on the Capri versus Mustang and the shape of the deck that we got ourselves into, but I don't think we need the notchback.

"I think Mustang ought to have the notchback and they ought to have it to themselves and that's fine, but I think we have to get all the marketing wizards together at Lincoln-Mercury Division and come up with a program to launch Capri.

"Everybody abandoned the car," he added. "I came to Lincoln-Mercury Division and said 'well, who is selling Capri?' and everybody kind of looked around and said, 'Capri?' So I've taken it on as my personal task—that along with Merkur—to get going on Capri.

"It's all a function of saying to the dealers, 'here's a nice car, here's a price point where we think you can sell the car' and if there are any marketing actions 'here they are,' and we'll just get going with it."

Special tires

Ron Pink, business manager of Vehicle Fleet Maintenance for Xerox Corp., takes delivery of the first of a group of Chrysler Corp. minivan service vehicles factory equipped with Uniroyal's puncture-sealing Royal Seal tires.

South Carolina allows auto sales on Sundays

COLUMBIA, S.C.—The South Carolina General Assemby approved compromise legislation liberalizing the state's blue laws which prohibited sales of specific merchandise, including autos, on Sundays.

The new law allows Sunday sales of almost everything except alcohol.

Output gains despite changeover downtime

Makers schedule 117,150 cars

By Louise Kertesz
Detroit Reporter

Estimated U.S. production of 117,150 cars last week was up 1.45 percent from the previous week's 115,481, though downtime continues at several plants for vacations and model changeovers.

A jump in expected final assemblies at Chrysler Corp. plants made the difference.

Last week's estimated build was about the same (up 0.22 percent) as the year-ago week's 116,890.

Year-to-date, 5,307,460 cars have been assembled, 4.50 percent more than the 5,078,860 completed last year at this time.

Last week's scheduled production was shared as follows: General Motors, 59.81 percent; Ford Motor Co., 27.00 percent; Chrysler, 6.15 percent; American Motors, 2.35 percent; Volkswagen of America, 2.00 percent; New United Motor Mfg. Co., 1.60 percent, and Nissan Motor Mfg. Co., U.S.A., 1.09 percent.

• Honda of America Mfg. Co.'s plant in Marysville, O., was down last week for vacation and model changeover. It is due to resume operations today (Aug. 19).

GM's Tarrytown (N.Y.) and Oklahoma City plants closed Aug. 16 for model changeover. They are scheduled to resume production Aug. 26 and 28, respectively.

As previously reported, GM's Van Nuys (Calif.) and Detroit plants are closed for changeover until Aug. 26 and Sept. 5, respectively.

GM's Wentzville (Mo.) and Fairfax (Kans.) plants are scheduled to reopen this week after being down for changeover.

Chrysler's Newark (Del.), Sterling Heights (Mich.) and St. Louis (No. 2) plants are scheduled to resume operations today after being down for changeover and vacation.

Volkswagen's Westmoreland (Pa.) plant is closed this week for model changeover. It is due to reopen Sept. 9.

Last week, companies reported production of the following 1986 models for the first time (some of them were built during the previous week): Buick Regal (along with 1985s); Buick LeSabre; Cadillac DeVille; Chevrolet Corvette; Oldsmobile Firenza; Oldsmobile Cutlass Supreme (along with 1985s); Oldsmobile Ninety-Eight; Oldsmobile Toronado (along with 1985s); Pontiac Sunbird (along with 1985s); Pontiac 1000 (along with 1985s); Pontiac Firebird, and Pontiac Fiero.

For the first time last week, Chrysler reported production of 1986 models of all its nameplates except: Plymouth Gran Fury; Chrysler LeBaron, LeBaron GTS and Fifth Avenue, and Dodge Lancer and Diplomat. Some of the 1986 models were built during the previous week.

Ford has scheduled daily overtime at all its car plants this week. Its Chicago facility is also slated for overtime Saturday (Aug. 24).

NHTSA looks at Chevette; Chrysler inquiry upgraded

WASHINGTON.—NHTSA has opened a preliminary inquiry into an alleged throttle-sticking problem on 1979-1980 Chevrolet Chevettes and Pontiac T-1000s. Inquiries involving several other General Motors lines have been closed.

The safety agency has also upgraded and expanded its investigation of reported engine-compartment fires in Chrysler K-cars with four-cylinder engines.

The investigation has been upgraded to an engineering analysis and expanded to include Chrysler K-cars produced from the 1981 to 1984 model years. An earlier preliminary inquiry included only Chrysler 4-cylinder K-cars built in the 1981 model year.

The Center for Auto Safety has been pressing NHTSA for action in both the GM and Chrysler cases.

An upgraded investigation was also announced for Audi 5000s built between 1981 and 1985 for alleged engine-compartment fires.

Investigations that have been closed include a rear-axle-failure investigation of GM's 1977-81 B-body cars—Chevrolet Impala and Caprice Classic, Pontiac Catalina and Bonneville, Oldsmobile Delta 88 and Buick LeSabre.

NHTSA also closed inquiries into an alleged vapor-lock problem with 1980-82 Ford light trucks and a seat-belt anchor-bolt defect investigation of GM A-body and B-body cars for 1979 and 1980.

The safety agency also said it had sent information requests to GM concerning possible rear-brake lockup of 1981-82 Chevettes with diesel engines and to Volkswagen of America regarding possible engine-compartment fires in Volkswagen Vanagons built from 1980 to 1982.

Ford has also been queried in regard to alleged front-wheel-spindle failure on 1984 Ford Ranger pickup trucks.

Blue law in Missouri

JEFFERSON CITY, Mo.—Gov. John Ashcroft has signed into law a bill that prohibits the sale or purchase in Missouri of new and used automobiles and trucks on Sundays. It is effective Sept. 28.

Truck production continues above 60,000 units

Domestic truck production was pegged at 64,004 units last week, 2.17 percent more than the previous week's 62,646.

Last week's output was 9.93 percent more than the year-ago week's 58,224.

So far this year, 2,174,249 trucks have been assembled, 9.98 percent more than the 1,976,931 completed last year at this time.

General Motors scheduled two overtime shifts Saturday (Aug. 17) at its Pontiac plant (No. 5).

Ford Motor Co. plans daily overtime this week (Aug. 19) at its facilities in Wayne, Mich., and Lorain, O.

Oshawa returns; Canada builds 20,846 cars

With General Motors' Oshawa (Ont.) car plant back in production after being idle for vacation and model changeover, scheduled Canadian auto production of 20,846 units last week jumped 67.98 percent over the previous week's 12,410.

Except for Volvo's Halifax (N.S.) plant, which is due to reopen Aug. 26, Canadian assembly facilities have completed their vacations and changeovers, and line speeds are increasing.

Last week's estimated build was 38.49 percent better than the year-ago week's 15,052.

So far this year, 652,710 cars have been assembled, 5.64 percent fewer than the 691,735 completed last year at this point.

American Motors' Brampton (Ont.) plant was down last week for inventory adjustment. It is scheduled to resume production today (Aug. 19).

Truck makers expected to build 10,240 units last week, 5.99 percent more than the previous week's 9,661, but 23.25 percent fewer than the year-ago week's 13,342.

Year-to-date, 535,136 trucks have been completed, 5.54 percent more than the 507,050 assembled last year at this time.

General Motors' Oshawa truck plant is scheduled to resume production this week after being down for vacation and model changeover.

Buick's front-drive LeSabre

LeSabre from Buick has been redesigned from bumper-to-bumper for the 1986 model year. It has front-wheel drive, a base V-6 engine and a lengthy list of standard equipment that includes four-speed automatic transmission, air conditioning and tinted windows. Above is the LeSabre Limited coupe. Story, other pictures are on Page 25.

GM and Chrysler using composites

Molded chassis in works

By Dan McCosh
Detroit Reporter

General Motors and Chrysler Corp. have quietly launched new car-development programs aimed at bringing molded, composite chassis manufacturing systems into production, Automotive News has learned.

Meanwhile, Ford Motor Co. sources confirm that the company is pursuing new technology to build extruded and molded chassis for its early-1990s cars.

The new-car programs—which GM calls its GM-100 and Chrysler its Genesis project—give active status to new technology that promises to revolutionize auto manufacturing.

It would virtually eliminate the assembly line as a means of producing cars, and it would have a tremendous impact on the steel, diemaking and stamping businesses that are the current foundations of high-volume auto manufacturing.

Composite exterior body panels have been in wide use since the 1960s, but the new direction being pursued by auto makers is aimed at replacing the hundreds of pieces in a car chassis and the car interior with large-scale molded structures—a technique that so far has not been attempted in any significant volume.

The chassis and interior are the most labor-intensive parts of auto manufacturing today.

At least one projection of an in-house study ordered by GM estimates that approximately 10,000 employes in stamping, diemaking and final assembly could be replaced by an operation with fewer than 500 workers in a molding operation that uses only four robots, compared with the hundreds currently in use in today's auto plants.

Domestic auto companies have been studying the potential of molding car chassis for decades, but the recent moves at GM and Chrysler indicate a new seriousness about getting the process into volume production.

The GM-100 and Genesis projects are general research programs, rather than aimed at developing a specific car, but they will include development of several prototypes for structural testing.

Both the GM and Chrysler projects also are longer-range programs than the highly publicized Saturn and Liberty projects, both of which will rely on highly automated, but relatively conventional assembly lines.

Ford, GM tie a portion to new finance-rate program

Are carryover rebates in peril?

By Edward Lapham
Marketing Editor

The news that Ford Motor Co., Chrysler Corp. and American Motors had joined General Motors in the latest round of finance incentives was overshadowed in some circles last week by the fear that GM and Ford might be close to ending their traditional 5 percent carryover rebate programs.

Those programs traditionally have been used to help move out old-model-year cars still in stock on introduction day.

The carryover allowance, or rebate, effectively reduces the dealer's cost and allows him to reduce his retail price in order sell out the old inventory and make room for the new.

The fear that those programs were ending was the result of the requirement that Ford and GM dealers have to give up one half of the carryover rebate to participate in the new finance-rate programs.

NADA President William J. Symes sent a letter to both auto makers, protesting the requirement. He said dealers depend on "the annual allowance as a planning tool" in developing their own marketing strategies.

"The requirement that dealers sacrifice half of this allowance, after buildout commitments have been made, is unfair for this year and will certainly undermine the confidence of dealers in their future buildout ordering," Symes wrote.

James G. Vorhes, vice president in charge of the GM Customer Sales and Service Staff, told Automotive News the NADA fears were unfounded.

"We did it this way this year because there are unusual circumstances, primarily because of the carrier strike, which means there is a net of two weeks less to get the cleanup job done," Vorhes said.

He also said there is a cash bonus program which allows dealers to reduce their cost of participation. Each division established a "middle of the road," or national average, objective for the period of the incentive, he said.

"Dealers who do better than the average will earn cash bonuses," Vorhes said.

"And dealers with no carryover stock on Oct. 3 will have no participation costs and will still earn the cash bonuses."

GM also pushed back its intro date one week which gives dealer the opportunity to cleanup more 1985 models before introduction.

All of the dealers contacted by Automotive News last week liked the new APR incentive programs and none seemed to think the participation cost was too stiff or that his objective was too high.

"I think it's fair," said one

Change faces UAW on 50th anniversary

By Marjorie Sorge
Labor Editor

News Analysis

There is a Chinese proverb that says the other side of change is opportunity.

If that is true, the UAW has more opportunities now, as it celebrates its Golden anniversary today (Aug. 26), than it has ever had. The question then becomes, "Can the union take proper advantage of the changes and turn them into opportunities?"

To do so, the UAW must move quickly. It cannot afford to plod along or make mistakes.

Changes in today's industrial world are global, rapid, efficient and unforgiving, and if the union cannot keep up, it may not be around in its current form by the year 2000. It could easily find itself a watered-down version of its old vibrant self.

The UAW must undergo a reincarnation of enthusiastic unionism while, at the same time, it negotiates visionary contracts that may not be popular with the members.

It must also deal with an anti-union sentiment in the U.S., expensive and often unrewarding organizing drives and the changing makeup of the rank and file.

In addition, the union must deal with industry's move to the

10th World Congress keynoted by Hahn

The 10th annual Automotive News World Congress is in full swing today (Aug. 26) at Detroit's Westin Hotel with a flavor that is more international than ever before.

It began with a keynote address Sunday night by Carl H. Hahn, chairman of Volkswagen AG, who presented a European view of the state of the industry.

Among other international presentations will be those of faculty members representing two nations new to the American automotive scene—Korea and Yugoslavia.

American presentations at the podium will be delivered by a number of executives on the 34-member faculty. They will cover automobile manufacturing, parts supply, robotics, labor, China trade, design, trucks, custom cars, R&D, financing, advertising and human resources.

Each presentation is geared toward helping provide a glimpse of the future of the industry and its various facets.

World Congress participants will gather at the Westin Hotel's Renaissance Ballroom for the Tuesday Evening Gala. Scheduled are presentations by Donald F. Kopka, vice president design, Ford Motor Co., and Chung Se Yung, president, Hyundai Motor Co.

The title of Kopka's presentation is Have You Driven a Probe Lately? Yung will discuss Hyundai's plans for the U.S. market.

Including the Ford Probe V, which will be featured in Kopka's presentaton, there are six vehicles on display outside the main hall during the World Congress, including a Hyundai and a Yugo.

Tickets to the Tuesday Evening Gala are still available from the World Congress registration desk on the 4th Level. Price is $40 per ticket.

Ford Probes outer limits of aerodynamics

Ford Motor Co. last week took the wraps off a fiberglass model of Probe V, an advanced aerodynamic concept car with a coefficient of drag of 0.137. The minimal wind resistance of the new car betters the record of the Probe IV, and apparently will make it the slipperiest driveable car in the world. The car features a clear glass vertical stabilizer, or "dorsal fin," at the rear. Story on Page 2.

breaking news

Samurai is $6,200

BREA, Calif.—Suzuki of America Automotive Corp. has placed a price of $6,200 on its Samurai sport/utility vehicle, which goes on sale Nov. 1 (Automotive News, July 1). The company expects to sell 10,000 of the vehicles annually through an initial network of 45 dealers in California, Flordia and Georgia.

Search narrowed

TOKYO.—Mitsubishi reportedly has narrowed its search for a U.S. plant site to four states. Illinois is rated first, Michigan second, Indiana third and Ohio fourth. The Illinois site is said to be

Is deficit out of control?

Trade policy debate as sticky as weather

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—In August, Washington is hot and humid. And this year, the discussion of the Administration's trade policy is just as sticky as the weather.

An "end of tour" report by Lionel Olmer, former undersecretary of Commerce for international trade, is a hot item around town. Olmer was a top Reagan Administration trade negotiator who never was reluctant to express his frustration in dealing with the Japanese.

A second trade report, from the wide-ranging House Energy and Commerce Subcommittee on Oversight and Investigations, has also been released by Committee Chairman John Dingell, Michigan Democrat, who is a frequent critic of the Administration's trade policy.

The documents should heat up the debate on what some are coming to view as the nation's out-of-control foreign-trade deficit.

Current bad news from the government's economic indicators is expected to heighten the sense of urgency over the trade deficit issue because many economists are pointing to imports as the source of stagnating economic growth in the country.

Congressional focus in this fall's trade-policy debate is sure to be on a bill which would threaten a 25-percent tariff on imports from Japan and other nations that have trade surpluses deemed excessive by U.S. lawmakers.

It is backed by top Democrats, who seem bent on making the trade topic an issue in next year's congressional elections.

Perhaps more important, the leader of the slim Republican majority in the Senate, Robert Dole, of Kansas, told Japanese lawmakers last week that a presidential veto of the bill might be overridden if Japan doesn't act fast to cut its trade surplus with the U.S.

Dole said trade deficit measures recently announced by the Japanese "ignored the urgency of the problem."

The Olmer report focuses principally on the devastating impact the strong dollar has had on U.S. manufacturers. He said that "much of U.S. industry now is poised between what may be a significant further weakening or what could be a a major resurgence in our international competiveness."

Olmer claimed that the strength of the dollar is the key to which direction American industry will take and that this "potential for erosion of our domestic base of manufacturing . . . should be of overriding concern" for the U.S. Government. He warned that such

To be shown in Frankfurt

Halley, a four-seat coupe, will be exhibited at the Frankfurt Motor Show, Sept. 12-22, by Carrozzeria Maggiora. The designer is Paolo Martin. The car has the mechanics and chassis of the Fiat Uno.

With design differences, exclusive offerings, a coming 'lower-end' car

L-M seeking a clearer identity

By Richard Johnson
Detroit Reporter

In an effort to better distinguish Lincoln-Mercury from Ford Division, L-M executives are planning a string of design differences and a growing line of exclusive L-M offerings, including an unannounced "lower end" car due sometime next year.

In an interview with Automotive News last week, L-M General Manager Thomas Wagner said the division wants to be recognized as "more than a high-priced Ford Division."

Wagner also said the division is targeting 7 percent of the U.S. industry in 1986 and has Pontiac in its sights.

L-M has been one of the hottest domestic car divisions since 1980, growing at a pace beyond the industry rate. Had it not been for the haulaway strike, the division would have scored its best August in history, according to Wagner. It may still break the August record, and next month is almost certain to be L-M's best September ever, he said.

Through the first seven months of 1985, L-M sales were 409,763, or 6.3 percent of the industry (domestic and import combined), compared with 465,520, or 7.1 percent, for Pontiac.

But Mercury's new Sable intermediate, described by Wagner as "probably the most important car this division has ever introduced," could tighten the gap between the two domestic divisions after hitting showrooms in mid-November.

"We're taking dead aim on Pontiac," said Wagner. "We think that we'll be in the 7-percent range next year. It is a very real target for us, assuming the industry stays high."

L-M, of course, has two makes of cars in its divisional lineup, while Pontiac has only one.

Although Wagner said "our primary competition is in Lansing, Flint and Pontiac, not on the 37th Floor of this building," he acknowledged that the division is working to set itself apart from Ford Division.

"Product is the greatest differentiator of them all and we are continuing to separate the two as much as we can," he said. "Thun-

And Chrysler applauds his stand

Petersen backs 25-pct. tariff plan

MACKINAC ISLAND, Mich.—Donald E. Petersen, Ford Motor Co. chairman, endorsed a bill that would threaten a 25-percent tariff on imports from Japan and other nations which have excessive trade surpluses.

Petersen backed the 25-percent tariff bill while speaking at the Midwestern Governors' Conference here. The bill has been introduced in the Senate and the House of Representatives.

A Chrysler Corp. spokesman in Washington said, "Chrysler believes the comments made by the chairman of Ford Motor Co. are an honest exposition of the problem and we could not agree more."

The spokesman also said Chrysler would be willing to testify in favor of either the 25-percent tariff bill or the Danforth/Packwood bill in the Senate which calls for an immediate reduction in the U.S.-Japan trade deficit.

At the Governor's Conference, Petersen also called the U.S. trade deficit a "national crisis" and said U.S. vehicles may have to become less American in order to be competitive.

He said the overpriced dollar is a key element contributing to the decline of American manufacturing.

"At least until recently," he said, "our domestic automobile industry has held onto its homegrown aura. Through the 1984 model year, most of the vehicles offered in the U.S. by the major domestic auto makers have been predominately North American."

Petersen pointed out that in spite of intensive efforts and significant productivity improvements, overall cost levels required for world-class competitiveness have not been achieved. He blamed increases in the strength of the dollar relative to the Japanese yen and European currencies.

"It is Ford's goal to remain strong here at home, in concert with remaining a strong worldwide business overall," he said. "But as things stand today, our U.S. vehicles may have to become less American in order to compete."

The U.S. is bearing the brunt of massive imbalances in world trade and capital flows, Petersen said. He recommended that top priority be given to solving the problem. To get the solution under way, he said, the Federal Government should raise to the highest priority the four steps that would help alleviate the problem:

1. Reduce the federal deficit, which would lower pressure on interest rates, quell demand for foreign capital and make the dollar less attractive abroad.

2. Press America's trading partners for complementary policies so that European and Japanese economic policies are targeted to foster growth at home.

3. Urge Japan to reduce sharply the enormous imbalance in its trade and capital accounts that is causing a real threat to world trade.

4. Take a federal leadership role in a multilateral effort to deal with exchange rate distortions and huge international capital flows.

Taiwan planning to sell cars in U.S. through Nissan

TOKYO.—Yue Loong Motor Co., Taiwan's largest automobile manufacturer, plans to sell cars in North America through Nissan Motor Co.'s distribution network, according to Nihon Keizai, a Japanese business journal.

Nissan recently bought a 25 percent interest in Yue Loong which is now producing Nissan's subcompact Sunny and Bluebird with Nissan's technological assistance and with some imported Nissan parts. The cars carry the Yue Loong name.

Nihon Keizai said Yue Loong and Nissan have yet to work out details of the plan, but exports are "likely to start in 1987 with an annual volume of 500,000 units."

Although denying that the two companies have reached an export agreement, a Nissan spokesman acknowledged that the Japanese firm plans to ship cars from Taiwan sometime in the future. However, he said, the region to which the cars will be exported has not been selected.

The published report noted that by linking with Yue Loong, Nissan will be able to circumvent Japan's voluntary restraints on car exports to the U.S. since exports of cars from Taiwan are outside the quota.

Bieber's invited, but will he show?

DETROIT.—One of the biggest secrets in the UAW today is whether UAW President Owen Bieber will appear at the Canadian UAW's Founding Convention the first week in September.

Last week, Bieber told Automotive News he had been invited but would discuss it only with Robert White, who heads the Canadian region and who will be the likely president of the Canadian union. At presstime, the word had not gone out.

Pininfarina Spider leaving U.S. market

By John A. Russell
New York Staff Writer

NEW YORK.—Pininfarina is pulling out of the U.S. retail market and will no longer sell its Spider convertible in this country.

The decision marks the end of a 16-year span in which the car was sold first by Fiat and then by International Automobile Importers, Inc.

George Ryder, U.S. representative for the Italian coachbuilder, said last week that this was the "end of the Spider" in the U.S. He said there are 200 cars in dealers' hands and that the company "is not bringing any more cars into the U.S."

While not highly critical of Malcolm Bricklin, whose IAI took up the banner from Fiat when that company decided to pull out of the market, Ryder termed the withdrawal a "sad situation" and said "a better job could have been done all the way around."

Now, he said, Pininfarina's main task is to assure owners that there is warranty and parts support for the cars. He said he is arranging that through various sources.

This is the second announcement in a month about the former product line of IAI. Bertone announced a major revamping of the distribution of its X 1/9 and will continue to market its two-seater mid-engined sports cars here.

But for Pininfarina, with its lines running at full capacity, the need is not there to continue.

The marketing of both companies' cars was taken over by IAI nearly three years ago when Fiat announced its withdrawal from the U.S. market. Malcolm Bricklin, whose Yugo America, Inc., is bringing in the subcompact Yugo, arranged to import and market the cars.

Prices were established at $15,000 under IAI with such luxury items as air conditioning and leather interiors. Fiat, when it last sold the cars in 1982, priced them at $10,990.

Bricklin said IAI would continue to honor its contractual obligations, which Ryder confirmed, saying IAI was still fulfilling its responsibilities under the sales agreement.

Early in February, Pininfarina and Bertone contracted with General Warranty to handle the warranty administration of the cars.

Ryder said he was not getting "a lot" of support from IAI on the parts issue though the company is working with Pininfarina on that.

Pininfarina has sourced parts from the Fiat North America operation in the U.S., which is basically a parts and warranty business now.

Ryder said there are about 200 dealers handling Pininfarina in the U.S. He said about 2,500 cars have been imported in the last 2½ years.

Ryder said Pininfarina did not reach its break-even point on the cars though he would not reveal the exact loss.

As for the reasons for failure in the market, Ryder said perhaps someday a study will be made and he would "sure like to know why it didn't go."

Nissan hike averages $91 on '86 cars

CARSON, Calif.—Nissan kept it simple as it priced its 1986 cars for the U.S. market.

The company said the average increase is $91, or one percent, on the Sentra, Pulsar, Stanza and Maxima lines. And the increases are uniform within each series of cars—no $146 on one model and $78, or whatever, on another.

Increases are $50 on the Sentra Deluxe, XE and SE; $100 on the Pulsar and Stanza and $200 on the Maxima.

Prices of the 200-SX and 300-ZX will be announced later.

Nissan's price leader, the Sentra Standard two-door sedan, is $5,499, unchanged from 1985.

The $50 increase on other Sentras resulted in the following 1986 prices: Deluxe two-door, $6,699; MPG Diesel two-door, $7,149; XE two-door, $7,349; Deluxe four-door, $6,899; XE four-door, $7,549; Deluxe wagon, $7,399; XE wagon, $8,049; XE hatchback coupe, $7,849, and SE hatchback coupe, $8,749. Prices are for 5-speed models.

Hikes of $100 were applied to the Pulsar NX coupe, now $8,349, and the Stanza GL notchback four-door sedan, now $9,649. The Stanza automatic rose an extra $30 (a total of $130) to $10,179. The Stanza wagon, introduced last April as a 1986 model, is $9,949.

Missing from the Stanza series is the XE four-door hatchback which was $8,949 for 1985. Thus, buyers will be paying considerably more than before to get into a Stanza.

Maxima prices are $13,699 for the SE (5-speed) and GL (automatic) four-door sedans and $14,599 for the wagon. All are up $200 for 1986.

Van converters must comply with stricter rules

Continued from Page 16

firm, it will accept its share of responsibility for assuring that products being certified are indeed produced according to the guidelines of its program.

The NVCA also said it is using impartial representatives to conduct inspections, verify documents and coordinate testing.

The certification program will be the highlight of NVCA's Expo '85, a van conversion and specialty vehicle show, that will be held Oct. 9-10 at the Indiana State Fairgrounds, Indianapolis.

The two-day event for auto dealers, fleet and leasing firms and RV dealers will feature displays by Chevrolet, Ford, Dodge and Toyota and several certified van manufacturers.

Dealers from an 11-state area are expected to attend, along with factory and administrative personnel from the major auto companies.

There will be daily seminars on various topics related to the standards.

Thailand lifts import ban

BANGKOK, Thailand.—To curb smuggling, the Minister of Commerce has approved the lifting of a ban on the import of completely assembled cars with engines larger than 2,300 cc. Under new regulations, import duty on such cars will be 600 percent or higher.

Japanese firm to build plant in Missouri

JEFFERSON CITY, Mo.—Missouri's trade office in Tokyo is paying dividends. Toyoda Gosei Co., Ltd., an auto parts manufacturer, announced plans to build a $2 million to $3 million plant in Perryville, about 75 miles southeast of St. Louis.

This will be the company's first venture in the U.S. Gov. John D. Ashcroft said Toyoda Gosei has an option to purchase land in the Perryville Industrial Park.

Ashcroft declined to answer questions about whether this announcement has any bearing on reports that Toyota is considering Kansas City as an assembly plant site.

Another Japanese firm, Maka Japan, Inc., will merge with Midland Marketing in Hillsboro, Mo. Midland sells and services coin mechanisms for vending machines; Maka Japan makes those products.

From American Custom Coachworks

American Custom Coachworks, Ltd., Beverly Hills, Calif., plans to build about 350 Van Cleef Series 1985 Cadillac limousines. The vehicles, which are stretched 56 inches, are equipped with color TV, intercom system, cellular telephone, separate climate control systems and dark tinted windows.

Price increase approved for new cars in Mexico

MEXICO CITY.—Mexican new-car prices have been boosted between 8 to 16 percent. Total increases for new models this year amount to 34 percent.

The Ministry of Commerce granted the sliding increases, less for compacts and more for deluxe models. Ford's Cougar now has a price tag of more than 5 million pesos and a Volkwagen sedan, standard with no added equipment, costs 996,985 pesos.

Dollar equivalent for the Ford Cougar at the government's "free" peso rate is $20,500 and for the Volkswagen, $4,086. But citizens able to buy pesos at quotations of around 350 to the dollar get the Cougar for approximately $15,000 and the VW for under $3,500. All other car models are priced in proportion.

A limited spot check in Mexico City, Monterrey, Guadalajara and Puebla revealed that despite high tabs, deluxe cars have been selling well. But models in the 1-to 3-million-peso price range have not been moving as well.

That is because members of Mexico's hard-hit middle class, feeling the effects of inflation and minor salary adjustments, just do not have sufficient resources to change cars each year. If the peso continues to weaken, and inflation resumes an upward trend, it could seriously affect car sales in the medium-price ranges.

Domestics down, imports up for June

Month's registrations close to 1984

By Jenny L. King
Detroit Reporter

June new-car registrations moved up 11,000 units from May's total but failed to achieve their year-earlier level as the domestic-market sales curve flattened.

First-half registrations were up 4.86 percent over 1984, according to figures compiled by R.L. Polk & Co. Domestics were up 3.46 percent, imports climbed 9.29 percent and gained 1.01 percentage points in share of the market.

Table on Page 51

The June total of 922,910 marked a 1.20-percent improvement over May's 911,932, but it was down 0.53 percent from 927,849 recorded for June, 1984.

Domestic registrations in June were off 4.86 percent from May, slipping to 666,863 from 700,907. They were down 5.26 percent from 703,901 a year earlier.

Import registrations were up more than 30,000 units June to June, to 256,047 from 223,948. Their share of the market expanded to 27.74 percent from 24.14 percent.

Ford Motor Co.'s modest 0.12 percentage-point increase in June was the only gain among the domestics in market share. That, coupled with the 3.60 percentage-point gain for imports, balanced losses at General Motors, Chrysler Corp. and American Motors.

GM dropped 2.73 percentage points to 42.92 percent from 45.65 percent. Chrysler slipped 0.25 percentage points, to 9.63 percent from 9.88 percent and AMC was off 0.74 percentage points, to 1.06 percent from 1.80 percent.

Ford was up 0.12 percentage points to 18.65 percent from 18.53 percent.

The domestic-only market in June was divided in this manner: GM had 59.39 percent, Ford had 25.81 percent, Chrysler had 13.33 percent and AMC had 1.47 percent.

A year earlier, GM earned 60.17 percent, Ford had 24.42 percent, Chrysler had 13.03 percent, AMC had 2.37 percent and miscellaneous domestics, 32 in number, accounted for 0.01 percent of the domestic total.

Domestic intermediates, with 28.27 percent of the market, represented the largest single market class share in June. Imports were a close second with 27.74 percent, followed by compacts at 15.91 percent, subcompacts at 11.45 percent, standards at 9.09 percent and luxury cars at 7.54 percent.

A year earlier, intermediates had 26.15 percent, imports had 24.14 percent, compacts had 19.12 percent, subcompacts had 11.74 percent, standards had 10.71 percent and luxury models had 8.14 percent.

Excluding the imports, the June market revealed intermediates soaring to 39.12 percent from 34.47 percent; compacts slipped to 22.02 percent from 25.20 percent; subcompacts edged up to 15.84 percent from 15.48 percent; standards dipped to 12.59 percent from 14.12 percent, and luxuries stopped at 10.43 percent compared with 10.73 percent a year earlier.

First-half registrations of 5,258,967 showed an increase of 4.86 percent over 5,015,409 for the first six months of 1984. They were up 23.48 percent from the 1983 sum of 4,258,857.

Domestics numbered 3,949,156 at the end of the first half, up 3.46 percent from 3,816,981 a year earlier, and up 28.69 percent from 3,068,670 two years ago.

Imports enjoyed a higher 9.29-percent increase over 1984, growing to 1,309,811 from 1,198,428. It should be noted that R.L. Polk & Co. counts Volkswagen Golfs, Honda Accords and Nissan Sentras assembled in the U.S. as imports.

Chrysler, Ford and the imports posted first-half market-share market gains. Chrysler was up 1.73 percentage points, to 11.14 percent from 9.41 percent; Ford was up 0.89 percentage points, to 19.84 percent from 18.95 percent, and imports gained 1.01 percentage points on their way up to 24.91 percent from 23.90 percent of the market.

GM was down 3.07 percentage points to 42.83 percent from 45.90 percent, and AMC dipped 0.56 percentage points to 1.28 percent from 1.84 percent.

Domestic makes with first-half market gains included Chrysler, Plymouth, Dodge, Ford, Lincoln and Pontiac. GM's remaining four were down as were Mercury and American Motors.

Chrysler Financial profits at peak for quarter, half

TROY, Mich.—Chrysler Financial Corp. reported record profits for the second quarter and the first half of 1985, setting the company on the path for a record year.

For the quarter, Chrysler Financial had net earnings of $35.6 million, up 66 percent from 1984's $21.4 million and surpassing the previous record of $31.8 million set in the first quarter of this year.

Sales volume rose 56 percent to $6.7 billion from 1984's $4.3 billion. Chrysler Financial provided financing for 32.7 percent of Chrysler's new-car and truck sales, compared with 15.9 percent in the second quarter of 1984.

In the first six months of this year, the financing subsidiary's earnings amounted to $67.4 million, increasing 68 percent and breaking the previous record of $40.1 million set in the first six months of 1984.

Sales volume for the six-month period was $12.0 billion, up 46 percent from $8.2 billion in the first half of 1984.

The company attributed its strong performance to an all-time high volume of financing and a significant increase in the number of Chrysler vehicles financed at the retail level. Finance incentives were offered on various models throughout the first half.

"For the first time in any quarter of the company's history, Chrysler Financial reached $6.7 billion in sales volume and financed 32.7 percent of Chrysler's new-car and truck sales," said Robert S. Miller, Chrysler Financial chairman.

New and used vehicles financed by Chrysler Financial during the first six months of 1985 amounted to 1,104,208 units, compared with 849,951 financed in the comparable period of 1984.

NADA names Knopp to post of DEAC rep

McLEAN, Va.—Gregory Knopp has been appointed to the position of Dealers Election Action Committee representative.

Knopp, 27, will report to Bob Daly, NADA's executive director of communications and industry relations. Knopp's primary responsibilities will be to develop and implement DEAC's fund-raising plans as well as to assist the dealers on the DEAC teams.

Knopp served for three years as political director for the Ripon Society, a Washington-based policy group, before becoming PAC coordinator for the annual Republican Senate-House Dinner.

DEAC, organized in 1975, is the political-action arm of NADA.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

movers and shakers

Chevrolet

Chevrolet has reassigned three zone managers and has appointed another man to the post of zone manager.

John C. Burrow was named manager of the Los Angeles zone.

John D. Helser succeeded Burrow as manager of the Boston zone.

David A. Walsh was appointed manager of the Charleston (W.Va.) zone, replacing Helser.

Lance E. Westerlund succeeded Walsh as manager of the Washington zone. Westerlund formerly was manager of marketing special projects in the Chevrolet Central Office.

Burrow joined Chevrolet in 1955 and has served in El Paso, Omaha, New York, Louisville and the Central Office.

Helser joined the division in Wichita in 1955 and also has held posts in Oakland, Calif., and Salt Lake City.

Walsh has been with Chevrolet since 1963. His assignments have included posts in Seattle, Salt Lake City, San Diego and the Central Office.

Westerlund, with Chevrolet since 1967, has served in Boston, Syracuse, the Midwest regional office and the Central Office.

John C. Burrow

John D. Helser

David A. Walsh

Lance E. Westerlund

Volkswagen of America

Sean Brennan has been named dealer enterprise manager for Volkswagen of America. He succeeds **Charles Cook,** who now is assistant manager of VWoA's Chicago region.

Sean Brennan

Brennan has been VWoA used-vehicle merchandising manager since June, 1984.

He began his Volkswagen career in 1973 with World-Wide Volkswagen Corp., Orangeburg, N.Y., an independent VW distributor. He later was vice president and general manager of Colonie Motors, Inc. (VW), Schenectady, N.Y., and joined the VWoA corporate staff in 1982 as fleet accounts manager.

Chrysler Corp.

Chrysler Corp. has appointed **John McDonald** regional manager—Central, U.S. Automotive Sales. He will direct the zone offices in Detroit, Chicago, St. Louis, Cincinnati and Pittsburgh.

McDonald, 40, has been Southern regional manager since 1983 and was Chicago zone sales manager for three years before that. He joined Chrysler in 1971.

Chrysler also announced appointments in its new Special Vehicle Management Operations group.

David E. Hyre, 41, was named chief—engineering and program management. He is responsible for the engineering, design and development of special vehicle powertrains and electronic, body and chassis components. He also is responsible for the production of the cars the new unit will manufacture. Hyre formerly was chief—engineering and program development in the Program Development Office.

John E. Fernandez, 36, was named manager—Chrysler Shelby Development Center in Santa Fe Springs, Calif. He is responsible for development work at the center and for coordinating its activities with Chrysler's Product Development Office in Highland Park, Mich., and with the Chrysler Pacifica Design Studios in Carlsbad, Calif.

Fernandez formerly was manager—advance planning in the Advance Planning Office, working on Chrysler's joint venture with Mitsubishi Motors Corp.

Robert L. Davis, 45, continues as Maserati program planning chief—Italy with the added responsibility for Maserati product development activities in the U.S.

Henry F. Carlini, 58, continues as Special Vehicle program executive, and **John L. VanDien,** 56, continues as Special Vehicle business development executive.

Porsche appoints

RENO.—James L. McDowell has been named director of planning and analysis for Porsche Cars of North America. He formerly was a corporate planner for Optical Coating Laboratory, Inc., Santa Rosa, Calif.

25-year Volkswagen dealer

Dale Schuppan, second from left, Schuppan's Sales and Service, Inc., Grand Island, Neb., receives a Volkswagen 25-year-dealer award. Also shown are James R. Fuller, left, vice president of Volkswagen of America's Volkswagen Division; Mrs. Schuppan, and John Capps, executive vice president of Volkswagen Mid-America, distributor for Arkansas, Kansas, Missouri and Nebraska.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Manufacturers' sales records used for compiling Oklahoma in 1985 and New York and Oklahoma in 1984.

Maybe a compact—or bigger or smaller

Ford Alpha: No year, no size

By Richard Johnson
Detroit Reporter

Ford Motor Co.'s Alpha car has been conceived as a compact—in the range of Tempo/Topaz—but could ultimately stretch or shrink, according to John Betti, Ford executive vice president—Technical Affairs and Operating Staffs.

The clean-sheet project which, like GM's Saturn and Chrysler's Liberty, is aimed at making the company cost-competitive with Japanese auto makers. It could involve a new corporation, a greenfield plant site and a highly integrated manufacturing complex.

Betti talked about Ford's allout effort to build small cars profitably during an informal question and answer session following presentation last week of the company's Probe V concept car.

He said the Alpha remains a "no-year" car. The Saturn project is geared for a 1989 introduction and Chrysler has vowed to beat Saturn to the marketplace with Liberty. But Ford officials have indicated in the past that an Alpha model won't appear before the end of the decade.

Indeed, Betti said there may not even be an Alpha car if cost objectives can be spun off the project and applied satisfactorily to existing vehicles.

"If it turns out you don't have to do the vehicle to get the cost, that would be great," he said. "But our current thought is that we're proceeding with a vehicle that will meet that cost target."

Betti said Alpha is "basically" a compact car, but could go up or down in size by the time it is ready for production.

"It will have the ability to stretch or shrink in terms of the basic car concept," he said. "But when we lock into a particular car, it may be only Tempo/Topaz."

To become cost competitive with overseas producers, Betti said, the company is reviewing a number of approaches to the Alpha project.

"Conceivably, it could be a whole new plant; conceivably, it could be a whole different company," he said. "The important thing is to be able to get the cost-competitive position, that's the bottom line."

GM has organized Saturn as a separate corporation and will built a highly integrated manufacturing complex in Spring Hill, Tenn., for Saturn operations.

"One of the problems with a big investment is that also provides cost to the product, so we wouldn't put extra investment in if it wasn't necessary," said Betti. "But the one thing that augurs in favor of trying to get the supply facilities close to the assembly facilities is control of inventory, the shipping costs, etc."

Asked whether a fully integrated Rouge-type works will produce Alpha, Betti said, "I don't think being the Rouge is the answer, but having isolated feeder plants scattered all over the country also isn't the answer. Somewhere in between has got to be the optimum."

Betti said the Alpha team has not been formulated as a "distinct, separate group." He said a core group of less 100 persons is providing leadership, but drawing from the operations for implementation studies.

"If a guy is working on an Alpha idea, he may all of a sudden see an application in something that he is doing in his day-to-day business and therefore he'll apply it directly," he said.

Makers turn out 133,035 cars for 16 percent gain

Estimated U.S. production of 133,035 cars last week was up 15.97 percent from the previous week's 114,716, though downtime continues at several plants for vacations and model changeovers.

Last week's estimated build was down 2.87 percent from the year-ago week's 136,959.

Year-to-date, 5,428,061 cars have been assembled, 4.11 percent more than the 5,219,623 completed last year at this time.

Last week's scheduled production was shared as follows: General Motors, 55.35 percent; Ford Motor Co., 26.04 percent; Chrysler Corp., 12.10 percent; American Motors, 2.07 percent; Honda of America Mfg. Co., 2.05 percent; New United Motor Mfg., Inc., 1.43 percent, and Nissan Motor Mfg. Co., U.S.A., 0.96 percent.

Volkswagen of America's plant in Westmoreland, Pa., is down through Sept. 6 for model changeover.

Ford scheduled overtime for Saturday (Aug. 24) and during this week at its plant in Chicago. The company also scheduled overtime this week at the following plants: Dearborn; Wixom, Mich.; Edison, N.J., and Kansas City.

General Motors scheduled overtime for Saturday (Aug. 24) at its Pontiac plant, which builds Buick Regal and Oldsmobile Cutlass Supreme.

Truck production climbs 2 pct.; 66,711 assembled

Domestic truck production was scheduled at 66,711 units last week, 2.76 percent more than the previous week's 64,921.

Last week's output was 13.45 percent more than the year-ago week's 58,800.

So far this year, 2,241,877 trucks have been assembled, 10.02 percent more than the 2,037,719 completed last year at this time.

Ford Motor Co. scheduled overtime Saturday (Aug. 24) at its plant in Lorain, O., and this week at its plants in Lorain; Wayne, Mich.; Kansas City, and Norfolk, Va.

Ford also announced it will add a second shift at its Norfolk plant in March, 1986. Approximately 800 employes will be added to the workforce. Positions will be filled by recalling laid-off workers at Norfolk and other Ford locations.

The Norfolk facility was chosen for an added shift because more pickup trucks are needed in the East and Southeast where the plant's products are distributed.

Chrysler Corp. scheduled two overtime shifts at its Warren (Mich.) plant last Saturday (Aug. 24). The plant will work two daily nine-hour shifts this week.

Canadian makers hike output to 24,627 for week

Canadian auto production was scheduled at 24,627 units last week, up 22.64 percent over the previous week's 20,080.

Last week's estimated build was 46.66 percent better than the year-ago week's 16,792.

So far this year, 676,571 cars have been assembled, 4.42 percent fewer than the 707,824 completed last year at this point.

Truck makers expected to build 15,152 units last week, 26.66 percent more than the previous week's 11,963, but 7.15 percent fewer than the year-ago week's 16,318.

Year-to-date, 552,011 trucks have been completed, 5.59 percent more than the 522,763 completed at this time last year.

International Harvester's Canadian plant was down for vacation last week.

AAA doubles death benefit for seat-belt wearers

WASHINGTON.—The American Automobile Assn. has added a safety-belt endorsement doubling the death benefit to its travel and accident policies sold by AAA Life Insurance Co.

Under terms of the endorsement, the benefit amount is doubled if a covered driver or passenger is killed in an automobile accident and proof is submitted indicating the insured wore a safety belt at the time of the accident.

At World Congress

Jon Wiseman

First-night speakers

Dr. Carl H. Hahn, left, and W.R. Timken Jr., right, opening-night speakers at the Automotive News World Congress, visit with Keith E. Crain, Automotive News publisher and editorial director. Hahn is chairman of Volkswagen AG, and Timken is chairman of Timken Co.

Big Fords may become 'imports' to meet CAFE

By Richard Johnson
Detroit Reporter

Though acknowledging it would be "a dumb move," Ford Motor Co. may decide this month to shift more than 25 percent of Crown Victoria/Grand Marquis parts production to Mexico and thereby avoid U.S. fuel-economy penalties.

"Re-sourcing" is the frontrunner among four options Ford presented to NHTSA last month as part of a request for relief from 1987-89 CAFE standards, according to Louis Ross, executive vice president, Ford North American Automotive Operations.

By increasing foreign content on big cars, the company would improve its domestic CAFE average and sidestep cash penalties otherwise expected in future model years. The relatively low-mileage Crown Victoria/Grand Marquis would be figured into the company's imported fleet, for which Ford enjoys CAFE credits.

In its filing with the government last month, Ford said it might have to cancel or sharply curtail U.S. manufacture of large cars or shift much of its production abroad.

But the company seems to have settled on a fourth option: Increasing the imported components used in big cars to more than 25 percent of the value so they would be counted as imports.

"We would utilize a lesson already demonstrated by the Japanese and that is to keep assembly here and increase foreign content," said Ross. "We are on a very serious study to do that. It will come up in September, and my prognosis is it seems to be the most efficient route to still build a large car, still maintain your fuel economy, still try to keep . . . jobs in the U.S. and Canada.

"So, we're looking at procurement of parts in Mexico and whether we can get a sufficient quantity has yet to be determined," he said. "Preliminary analysis says yes, and so we will be acting between now and the end of the year to re-source large cars."

The outsourcing maneuver would involve only Crown Victoria and Grand Marquis at first and could eventually extend to Lincoln Town Car and Continental. Crown Victoria and Grand Marquis are assembled in St. Thomas, Ont., although Ross said 80-90 percent of parts production is in the U.S.

Final assembly of the 5-liter, V-8 power plant now built at Ford's Cleveland engine plant would be transferred to Mexico, although the Ohio facility would continue to produce some parts for the engine. Other plants affected—involving production of more than 100 components—"are too numerous to mention," Ross said.

Ross said engine production could go to company facilities in Cuatitlan or Chihuaha, Mexico.

While taking production of the entire vehicle overseas would result in the loss of more than 8,000 jobs, Ross said "a move to make it over 25 percent foreign content would get it down to . . . a couple of hundred jobs (lost), I expect."

Ross said UAW officials have already been advised about the outsourcing plans.

"I have met with the UAW several times and asked their support and they're fully knowledgeable," he said. "Before we went to the government, we talked to the UAW about it.

"This is a dumb move," Ross added. "It's dumb for the U.S., dumb for the union, for Ford, for everybody else. It will cost us over $100 million in investment and cost us a lot per car and it doesn't do anything but lose jobs for the U.S.

"We went to the union and said 'isn't that dumb' and they said 'yeah it is.' And so we're both trying to get it changed, but we're not sure if we can get it changed in time."

Ross said the company is close to being forced to make a decision on the big-car issue.

"By the end of the year, I think the ship will have sailed," he said. "If we start today, it's the 1988

VW chief is World Congress keynoter

Hahn says U.S. must lead world

By Richard Feast
Automotive News Staff

Stimulation of the world's economies—which would lead to an improvement in auto industry prospects—can come only from the U.S., Dr Carl H. Hahn, chairman of the Volkswagen Group, told the Automotive News World Congress.

"Quite simply, no one else has the resources, the strength, the self-confidence, the bold courage and the strong, broad-enough platform, all of which are required for success in this task," he declared in his keynote address.

European countries are beset by political and economic stagnation, which embraces protectionism and contraction, Hahn said. Japan's system will not work forever if trade flows only in one direction, he added.

An American-led initiative in the development of areas such as Latin America is long overdue, Hahn said. There, the burdens of debt are beyond their economic capacity and human strength to solve.

"I believe there must be some sort of Marshall Plan to get that area moving again," Hahn said. Hopefully, we will remember that the Castros are in the wings, ready to reap the harvest of poverty, hunger and disorder."

The VW chief's speech was a European view of the state of the auto industry. It emphasized the more international tone adopted for this, the 10th World Congress.

Hahn reported that America's free trade position enabled Volkswagen to become one of the world's largest auto makers. Today, the company is the most international of the European makers, with major assets in North and South America, in Japan and in the People's Republic of China.

That free trade continued until the Japanese were finally successful in the market, following significant failures in the 1950s and 1960s. Those grave consequences led to the Voluntary Re-

Hyundai plans to build Canada assembly plant

By Dan McCosh
Detroit Reporter

Korea's Hyundai Motor Co., Ltd., plans to build a plant in Canada that will assemble 100,000 cars a year for the Canadian and U.S. markets.

Hyundai officials in Seoul, Korea, said last week the company plans to spend some $200 million (Canadian) to build the plant, which will open in 1988.

The site has not yet been determined, according to Hyundai, but Canadian sources anticipate it will be near Montreal. The plant will employ 1,200 persons.

The Canadian plant is expected to assemble a new subcompact, likely a new generation of the current Pony model. Hyundai also is building a parts plant in Canada that will make electrical components.

Hyundai's impact on the Canadian auto scene has been explosive. The Korean auto maker entered the Canadian market early in 1984 and now is first in import sales with 39,977 deliveries for the first seven months of 1985.

Korea began buying Canadian auto parts and now accounts for nearly 10 percent of Canada's $190 million export business in parts—three times the trade going to Japan.

Hyundai's rapid growth in Canada quickly cost the company its favored status as an exporter from an underdeveloped country. It will begin paying the Canadian tarrif on car imports in 1987 and is already paying Canadian duty on imported parts.

Under terms of the joint U.S.-

Renault to fold Formula 1 team

PARIS.—The Renault board of directors decided last week to discontinue its factory Formula 1 auto racing team at the end of this year. It will continue to supply turbo V-6 engines to Lotus, Tyrrell and Ligier, however. The cost-cutting is part of a broad economy drive at Renault in the wake of huge losses. Renault entered Grand Prix racing in 1977 and has won 15 events. Lotus won two using Renault engines.

Alfa grooms Spider for America

MILAN, Italy.—Alfa Romeo soon will introduce a facelifted version of the Pininfarina-built Spider. The 1986 model has been restyled with the American market in mind. The U.S.

Chrysler, UAW split over profit sharing

By Marjorie Sorge
Labor Editor

Chrysler Corp. did not include profit sharing, the continuation of cost-of-living-adjustments or annual wage increases in its first contract proposal, which it presented to the UAW last week, said Thomas A. Miner, Chrysler labor relations vice president.

Miner also said the company has asked the UAW to cut the number of job classifications throughout the company from about 500 to six to 12.

The UAW has already demanded profit sharing, pattern bargaining and job security along with parity with workers at General Motors and Ford Motor Co. With the latest COLA increase, Chrysler assemblers make $13.23 an hour while those at GM and Ford make $13.29.

While that is very close to wage parity, a UAW spokesman said the Chrysler workers are behind in many other benefit areas and the union wants to get back to parity on those.

The first proposals are very general, and although Chrysler did not offer profit sharing, it does not mean the company is not interested in negotiating some formula.

Miner said he believes Chrysler and the UAW will spend a lot of time discussing it during the talks aimed at reaching a new agreement by the Oct. 15 deadline.

20,000-40,000 a year, starting in 1988

Ford to import cars from Taiwan affiliate

By Richard Johnson
Detroit Reporter

Ford Motor Co. will import 20,000 to 40,000 small cars annually from its Taiwan affiliate, possibly beginning in 1988, according to Louis Ross, executive vice president, Ford North American Automotive operations.

Ross confirmed the Taiwan plans during a question and answer session following his address to the Automotive News World Congress in Detroit last week.

While citing Ford's announced intentions to import vehicles from Kia Industries of Korea and a new Ford assembly plant under construction in Hermosillo, Mexico, Ross also noted that "we are bringing a nominal amount of cars into North America from Taiwan Ford."

Ford Lio Ho Motor Co., the company's Taiwanese affiliate, applied for government approval last year to expand its automotive manufacturing and assembly facilities in Chung Li, Taiwan, by 1986.

The $35-million expansion will increase Ford Lio Ho production capacity from the current 40,000 cars annually to 90,000.

In announcing the expansion last fall, the company said it planned to export 30,000 to other markets. Ford officials have not previously said where the cars will go, but Ross last week said a decision has been made to bring the Ford Lio Ho vehicle into the U.S.

"The volume is like 20,000-40,000, something like that," he said. Asked when the car would debut here, he said "probably 1988, but I don't remember."

The additional capacity at Chung Li will be used to build a vehicle based on the Ford Laser, a Mazda-designed subcompact now being produced by various Ford affiliates and associated companies for sales in 65 world markets. Ross put the size of the new vehicle "between Yugo and Escort."

Ford Lio Ho's $35-million expansion brought the company's total investment to about $135 million. The Taiwanese firm was organized in 1972 by Ford and Lio Ho Automobile Industrial Corp., of Taiwan, and began producing the Laser in January, 1981. Seventy percent of the company is owned by Ford Motor Co.

Plans to expand Ford Lio Ho facilities last year followed mutual termination of a proposed joint car-production venture involving Toyota and the Taiwanese Government. That venture originally called for Toyota to produce annually 300,000 Corolla-type cars with 1.3 and 1.5-liter engines.

At the insistence of the Taiwanese Government, 50 percent of the units would have been exported.

Ford opposed the Taiwan-Toyota marriage, asserting that the country should take a more conservative approach to the auto export market. Taiwan's six auto manufacturers now produce only for the domestic market. Ford executives maintain that the more gradual Ford Lio Ho export plan is a better way to increase auto exports in the country.

Alcohol project for Swedish firm

WASHINGTON.—The Department of Energy has selected Swedish Motor Fuel Technology Co. (SMFTC) to collect, classify and comment on international data on generating and using alcohol and alcohol blends as motor fuels.

The International Energy Agency (IEA) will share information and cost with SMFTC, which is partly owned by the Swedish Government. Since 1975, the firm has been the lead organization in Sweden on alcohol processing and use and research and development.

The IEA agreement is supported by Canada, New Zealand, Sweden and the U.S.

Chrysler's Sperlich foresees dogfight

Chrysler Corp. President Harold A. Sperlich predicted the Japanese factories moving into the U.S. will create excess capacity that will slice small-car prices and industrywide profit margins. Sperlich addressed a general session of the Automotive News World Congress Monday morning.

Ephlin sounds the call for an auto summit

By Marjorie Sorge
Labor Editor

The revolutionary changes in recent UAW agreements such as Saturn are not enough to help the auto industry in the long-term, and an auto summit should be called soon to examine the industry's worldwide future, according to a top UAW official.

The summit would include discussions on tax policy, world trade, labor practices and managerial perogatives, UAW Vice President Donald F. Ephlin told the Automotive News World Congress.

Representatives of labor, government and industry would attend the meeting.

Ephlin said the recent agreements between the UAW and New United Motor Mfg., Inc.; Mazda and, Saturn, which offer more flexibilty in work rules and economics, are a clue to where the UAW is going in the future.

Chrysler Corp. and the UAW are currently conducting contract talks, and the company has said it is very interested in portions of the Saturn deal.

"Saturn has no influence on the 1985 talks at Chrysler," he said.

According to Ephlin, the Saturn contract is designed to keep small-car production in the U.S. and "if another company wants part of Saturn, they'll have to take all of it."

However, at a press conference following his speech, Ephlin said the UAW would be willing to talk about a Saturn-type agreement with Chrysler for its Liberty project, provided that the project produces a complete car in the U.S.

Ephlin also told the World Congress that if an auto summit cannot be arranged in the near future, the trade issue must be acted upon since the U.S. trade deficit is expected to eclipse $150 billion this year. Last year, it was $123

Sperlich sees problem in new plants

By Dan McCosh
Detroit Reporter

"Excess capacity isn't going to go away," Chrysler President Harold A. Sperlich told reporters following an address to the Automotive News World Congress.

The new small-car assembly capacity coming from U.S.-based Japanese plants that will open in the near future is going to continue the pressure on small-car prices, Sperlich said, and cut margins for the whole industry.

"It's going to be a real dogfight," he added.

Questioned about the cost and potential life of current incentive programs, he said, "They cost us a lot. In the short term, the market will grow, but it's going to be tough for a long time."

He declared, "They aren't making the tough decisions in Washington," referring to Chrysler's position that the growing national debt and the end of the Voluntary Restraint Agreement with the Japanese is leading toward a deep recession in the next few years.

Sperlich also confirmed the existence of Chrysler's Genesis program. He , called it a "skunkworks" program looking at future technology, but declined to elaborate. Automotive News reported Aug. 26 that Genesis is a mid-1990s program aimed at bringing molded composite chassis to volume production, a process that promises to eliminate most of the conventional assembly line.

Sperlich said Chrysler's future products will broaden its current lineup to include upscale markets and more specialized niches.

In his speech to the World Congress, Sperlich called for a broad initiative to reduce the current trade deficit with Japan. He suggested that the Japanese be given an ultimatum to cut the dollar deficit "instead of arguing with the Japanese over plywood one day and walnuts the next."

" If we do nothing substantial to attack these deficits, the crash, if it comes, will be steep and hard," Sperlich said.

The economic scenario outlined by Sperlich was for a continuing deficit in the federal budget, escalating from $200 billion to $300 billion in the next few years. The resulting demand for credit, in turn, would weaken the U.S. economy and provoke a steep recession.

EPA proposal with 3 options could overturn gray market

By Jake Kelderman
Washington Reporter

WASHINGTON.—The EPA last week proposed new regulations that could overturn the applecart of the importers of gray-market automobiles.

Gray-market importers typically sell modified high-performance European luxury sedans and sports cars here for significantly less than the original manufacturers.

The gray market has grown in the last five years from a small collection of individuals moving approximately 5,000 units each year to more than 600 professional modifiers who will move as many as 70,000 units in 1985.

Mercedes-Benz, BMW and—to a lesser extent—Porsche and others have been pressing for stringent curbs on or elimination of the importers who, they say, are costing them money and goodwill.

Indeed, EPA was the first place they tried, but since 1980 the agency has steadfastly refused to address the situation other than in a piecemeal fashion.

Last week, all that changed as EPA proposed three options it has under consideration to deal with the gray-market importers.

One would put them out of business altogether and the other two would likely eliminate the small "fly-by-night" operations by subjecting all the importers to nearly the same rigorous and costly demands EPA makes of the original builders.

"What we are trying to do is either put all this behind us completely or keep in business only the responsible and professional modifiers who know what they are doing," an EPA source said.

EPA will hold hearings on the proposals Oct. 9 in Washington and Oct. 24 in San Diego. The EPA proposals are:

1. Ban gray market imports altogether.

2. Require anyone who wants to import a car to go through full small-volume manufacturer emission certification and complete compliance with all other EPA regulations including Selective Enforcement Audits, recall, maintenance instructions, emissions warranties, emissions labeling and fuel-economy requirements, including a full highway fuel economy test, gas-guzzler tax and Corporate Average Fuel Economy requirements.

3. Require of the gray marketers the same things that are required of the original makers and provide only a very limited exception whereby a truly rare automobile could be brought in by an individual as long as it was modified by an EPA-certified modifier.

EPA said that someone who imports fewer than 60 cars per year would qualify for that less-strin-

Auto makers must learn to adapt, McCormack says

In South America, change is norm

By Matt De Lorenzo
Automotive News Staff

Despite economic and political uncertainty, South America remains an important market for all auto makers, and learning to adapt to the changes is the key to survival in that region, John P. McCormack, General Motors vice president for Latin American Operations, told the Automotive News World Congress.

Struggling with high inflation, a heavy debt load and a rising population, South American countries seek to foster and protect industry. Those changing economic and political winds often mean rapid changes in the way auto companies conduct their business, McCormack said.

"How fast do things change?" McCormack asked rhetorically. "Well, one of our people who's spent considerable time in South America likes to say that 'stability' means no major changes for the last three months. And that's not much of an exaggeration.

"It's not easy to put in a major investment with the very real possibility that in two or three years, or even tomorrow, conditions may turn 180 degrees."

He said that policy changes can occur not only following a change in government, but also in "stable" governments reacting to shifting conditions.

"Throughout GM's long history in South America, we've seen chronic shifts in the rules and re-

Personal touch just right for dealers, Orkin says

Radio Ranch boss calls for humor

By Mary Beth Mayer
News Editor

The head honcho of the Radio Ranch and Home for Wayward Cowboys rode into town last week with a message: Humor in advertising works; it works well in radio, and radio works.

Dick Orkin, self-styled head honcho of the Los Angeles "ranch" which produces humor advertising, told the Automotive News World Congress that automobile dealers currently spend 25 percent more of their budget on radio advertising than the average retailer.

"Radio is right not just for dealers but the automotive industry as well, which should take a tip from the importance dealers attach to it," Orkin said.

In describing the transition from the days of *our* radio in the 1950s to *my* radio in the 1980s, Orkin said, "In the 1950s, people sat in the living room as a family listening to network programs on one big radio. Then network block programming was gone and the transistor radio came along. Now everyone has a radio to take along wherever we go."

According to the Radio Advertising Bureau, Orkin said, radio listenership is up 47 percent since 1970.

"Since the *our* medium has become the *my* medium, radio has become the most potentially effective medium for one-to-one personal communication," Orkin said. "The next best thing would be having a salesman at every consumer's side."

However, according to Orkin, most advertisers do not like to get personal. They think the audience just wants the facts about a product or service.

"But if the agency or whomever insists, the advertiser will go along with the 'personal stuff' but in ways that reveal they misunderstand the idea," he said. "They think if they come up with an ad slogan like 'We're the friendly car dealer,' or 'Our service department *cares* about *you*,' that's plenty personal."

Another problem is "ad ego," from which Orkin said many advertisers are suffering.

"The advertiser believes because it's their investment, no matter what they have to say the consumer will drop everything and turn up the volume," Orkin said. "After all, the thinking goes, 'we're talking to them, it's costing us money . . . aren't they supposed to be out there listening to us and hanging on our every word?'"

Listeners did "hang on to every word" in the days of *our* radio, but listening habits have changed.

"Now, I don't just listen to *the* radio, I listen to *my* radio *station* or several of them," said Orkin. "Boring advertising forces station switching. Zap, zap and there goes the consumer the advertiser thought was hanging onto every word."

An early tenet of advertising was "Find the meaningful product point of difference and drive it home." But things have become more complicated, Orkin said.

Today, radio's assets grow out of the way listeners relate to radio as a personal medium. Those assets are radio's ability to appeal to the imagination and its ability to involve the listener by inviting participation, he said.

"By stimulating an emotional response, humor breaks through the clutter. It grabs attention; draws interest to the product or service and rewards the listener for the time spent because there's a payoff at the end. Humorous advertising entices the advertiser to stay with the spot and hear its conclusion."

Orkin stressed that radio humor can be used to connect a product or service with the human condition. In that way, humor creates awareness and establishes an image, he said.

Since people tune in to radio to be entertained, not to listen to commercials, "if you can inform *and* entertain, you are saying something special about your product or service, about your company. It says that you connect with your potential customer's life in a very real way. It says you understand how things really are out there—sometimes tough, sometimes funny and hardly ever perfect."

Orkin concluded, "Advertising that stays in touch with the human condition—that solidly connects—is advertising that can work."

As lines speed up after changeover

Car production pegged at 141,924

By Louise Kertesz
Detroit Reporter

Domestic auto production was expected to jump 4.77 percent to 141,924 units last week from the previous week's 135,467, as line speeds increased after model changeover.

Last week's scheduled output was 13.44 percent more than the year-ago week's 125,112.

So far this year, 5,582,417 cars have been assembled, 4.24 percent more than the 5,355,536 built last year at this point.

Last week's estimated production was shared as follows: General Motors, 55.38 percent; Ford Motor Co., 22.75 percent; Chrysler Corp., 15.64 percent; Honda of America Mfg. Co., 2.05 percent; American Motors, 1.94 percent; New United Motor Mfg. Inc., 1.34 percent, and Nissan Motor Mfg. Co., U.S.A., 0.90 percent. Volkswagen of America's Westmoreland (Pa.) plant is closed for changeover until Sept. 6.

No Saturday overtime was scheduled during the Labor Day weekend.

All U.S. assembly plants are closed today (Sept. 2) in observance of Labor Day.

GM's Linden (N.J.) plant closed Aug. 30 for modernization, with the new 1986-model E and K cars now being produced in the Detroit-Hamtramck facility.

The Linden plant is expected to begin building new GM products on Sept. 2, 1986.

GM's Janesville (Wis.) plant, which produces the Cimarron, is down for model changeover. The company has not specified a reopening date.

The 1986 Buick Electra and Pontiac Parisienne and 6000 have been in production for two weeks.

All Chrysler plants have reported production of 1986 models for the past two weeks.

Honda's Marysville (O.) plant has also been building the 1986 Accord for the past two weeks.

Ford's Wixom (Mich.) plant is scheduled to begin building the 1986 Lincoln Continental, Town Car and Mark VII tomorrow (Sept. 3).

Production of the 1986 Ford Escort and Mercury Lynx is also expected to begin tomorrow.

Ford has scheduled daily overtime this week at its plants in Chicago; Dearborn; Edison, N.J.; Kansas City, and Lorain, O.

Ford's plants in Chicago, Dearborn and Lorain are slated for overtime Saturday, Sept. 7.

Bondurant notes advances in handling of U.S. cars

By Arthur Flax
Assistant Truck Editor

American car makers, spurred on by a new awareness of performance driving techniques and competition from the Japanese, are on their way to building automobiles that handle as well as any in the world, racing school proprietor Robert L. Bondurant told the Automotive News World Congress.

Three years ago, Donald Petersen, Ford Motor Co. chairman, took a three-day course at the Bob Bondurant School of High Performance Driving at Sears Point Raceway, north of San Francisco.

Since that time, more than 125 Ford engineers and executives have taken Bondurant's course. So have a number of Goodyear and Firestone engineers.

"What Petersen wanted to learn," Bondurant said, "was how he and the engineers should evaluate a car."

As a result of the training, Bondurant said, the Ford people have "a lot more confidence and understanding about driving the car; maybe a better touch. They're able to do a better test job with it, and they have a lot more enthusiasm about the product."

He also said that the handling of the majority of American cars has improved over the past several years (although Ford is the only company to send its engineers to the Bondurant school).

"Five years ago, there was a huge difference in handling between U.S. and European cars," he said. "Now, all the (U.S.) manufacturers are doing a much better job."

Bondurant said competition from Japanese car makers, also builders of good-handling cars, forced the U.S. makers to improve.

But he added, "Some American cars are still a little soft. I've seen it from being around the Ford people. There are still a lot of people who have been there for a long time, and it's old thinking not catching up to the new thinking.

"I remember being asked to evaluate a new car with three suspensions. The one that I thought was the worst was the one they wanted for the base car . . . They said the mom and pop people don't know the difference and want a smoother ride.

"I said if you give them a better suspension, they get in less trouble and the car works better. They went with the better suspension."

The old-school thinking still must change, "but, boy, we're on the right line," he added.

Truck makers boost output to 68,501 for week

Domestic manufacturers estimated production of 68,501 trucks last week, 15.24 more than the previous week's 59,442 and 16.71 percent more than the year-ago week's 58,691.

So far this year, 2,303,109 trucks have been assembled, 10.01 percent more than the 2,093,470 completed last year at this time.

No Saturday overtime was scheduled over the Labor Day weekend.

All assembly plants are closed today (Sept. 2), Labor Day.

Ford Motor Co. has scheduled daily overtime this week at its plants in Lorain, O.; Louisville; Wayne, Mich., and Norfolk.

Overtime is scheduled Saturday (Sept. 7) at Ford plants in Kansas City, Lorain and Wayne.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to operate two nine-hour daily shifts this week.

Canadian cars jump to 25,586; near 1985 high

Scheduled output of 25,586 cars in Canada last week was 5.62 percent more than the previous week's 24,224 and was right in line with the top production of any week this year: 25,789 for the week ended June 22.

Because of downtime and slowdowns for vacations and model changeovers, production had not topped 25,000 in 10 weeks.

Last week's expected production was 52.70 percent more than the year-ago week's 16,756.

So far this year, 701,754 cars have been assembled, a pace that is now just 3.21 percent behind the 725,045 built last year at this time.

Truck makers pegged production at 16,390 units last week, about the same as (up 1.19 percent) the 16,197 for the previous week.

Last week's output was 11.07 percent more than the year-ago week's 14,756.

Year-to-date, 569,446 trucks have been assembled, 5.88 percent more than the 537,814 completed last year at this point.

Assembly plants are closed today for the Labor Day holiday.

New at Frankfurt

Daihatsu Charade convertible unveiled

ASC, Inc., Southgate, Mich., has added a soft top to the Daihatsu Charade. The concept car will be on display at the Frankfurt Motor Show this week. ASC has also enhanced the Charade's appearance with sculptured bodyside appliques, wheel flares, front and rear fascias, rear decklid wing and front driving lamps.

VW to show Golf Syncro

Volkswagen's Golf Syncro will be at Frankfurt. The vehicle goes into production early next year and will be the first in its class with four-wheel drive.

Opel Kadett sedan

Opel will feature a four-door sedan version of its Kadett at the Frankfurt show. Opel also will present two other new versions of the Kadett line. By expanding the lineup, Opel hopes to increase the Kadett's appeal.

Ford Scorpio gets all-wheel drive

Ford is extending its all-wheel-drive system to the new Scorpio sedan, which will be on display at Frankfurt.

NEWSPAPER

Profits steady; trade-in mix improves

Last of '85s fading away

By Richard Johnson
Detroit Reporter

Though a nationwide hauler strike had U.S. dealers fearing a disastrous carryover less than a month ago, a round of finance incentives is apparently making fast work of the last of the 1985 models.

A tentative carrier settlement followed by a wave of factory-sponsored buyer come-ons have created a surge of showroom traffic around the country.

Dealers say profit margins are generally holding up in the waning days of the model year and many cite a better mix of trade-ins. There are even occasional reports of 1985 models being traded on 1985 models.

The incentives are attracting cash buyers as well as customers looking to finance their purchases. Some buyers who normally pay cash are financing at low rates and investing their money.

"Everyone we talk to is selling them as fast as they can get them," said a NADA spokesman.

But prospects for another haul-away walkout has some dealers worried. Ratification ballots from more than 21,000 Teamsters car haulers are due back later this week and there were rumors of another work stoppage circulating.

General Motors and Ford Motor Co. rankled some dealers by requiring retailers to give up half their traditional 5 percent carryover rebate to participate in the new finance programs. But a survey of dealers around the country, including several NADA board members, indicated that incentives are enabling a smooth transition into the new model year.

"We anticipate very few problems," said Joe O'Daniel, an Oldsmobile dealer in Evansville, Ind., and a NADA director. "As a matter of fact, we're short on inventory. The 7.7 (annual percentage rate offered by GM) has just about cleaned us out in spite of the backlog of vehicles we had from the trucker strike."

"I don't think there is going to be much of a problem with carryovers this year," said James Woulfe, a Ford and Chrysler-Plymouth dealer in Dublin, Calif., and a member of the NADA board. "At maximum, we'll have 10 or 15 Fords left when we get finished. I can't complain."

Ernie Bates, a Pontiac and GMC dealer in Elizabethtown, Ky., said the low finance rate "really did a number for us."

"We had a pretty large inventory in the middle of July," said Bates, a NADA director. "But after the strike and the interest (incentive), we got some heavy traffic."

Jim Kelel, vice president of Greenfield AMC-Jeep-Renault, Detroit, one of the largest AMC outlets in the country, said a combination of incentives and prudent ordering will make for a smooth carryover.

"With what I have in inventory, we should be in good shape," said Kelel. "It is probably the cleanest I've been in a long time."

GM fired the first shot in the current incentives wars in mid-August by offering the unprecedented 7.7-percent rate on most 1985 cars and light-duty trucks. Ford followed with its "7.7 Plus" program that included a "cash assistance alternative" for buyers arranging their own financing and for lease customers.

Spotlight falls on new 4WDs at Frankfurt

By Richard Feast
European Editor

LONDON.—The Frankfurt Motor Show, which opens to the public Thursday (Sept. 12), will underline the German manufacturers' commitment to four-wheel drive.

BMW and General Motors' Adam Opel are making their first forays into the field with 4x4 versions of the 3-Series and Kadett Rally, respectively. Ford will be extending its all-wheel-drive offering to the new Scorpio sedan, and Volkswagen's Golf Syncro will be the first of that type in its class.

While 4x4 is nothing new, even for passenger cars, its adoption by the world's auto makers has increased substantially over the past few years. The catalyst was the Audi Quattro, introduced in the spring of 1980. Now, just over five years later, every Audi series is available with four-wheel drive.

Just as it does on every occasion, Frankfurt will bristle with technical novelties and innovations. But there will be few of the imminent all-new cars which rumors have suggested will debut at the show. They will be announced over the next few weeks and months.

Among the notable non-starters are the long-awaited replacement for the Dutch-built Volvo 300 series, the mid-range Peugeot which is still known only by the C28 code name, the Fiat Type 4 sedan, the new-generation Mazda RX-7 sports car and the upper-medium-range Renault 21 sedan.

The Peugeot will appear at the end of September. The Mazda will debut at November's Tokyo Auto Show, and the Fiat will be introduced in mid-December. The Volvo and Renault are not expected until early next year.

The 4x4 BMW 3-Series is but one of several variations on the model that will appear at Frankfurt. There will be a diesel version —to counter the success of the Mercedes-Benz 190-D—a cabriolet and a very-high-performance

Boom time for sales: 405,080 in 10 days

By Jenny L. King
Detroit Reporter

Who said late-summer car sales have to be dull? Responding to eager customer acceptance of low-interest-rate financing, U.S. auto makers delivered more than 400,000 new cars in the late-August period alone and, with adequate supplies, promised a strong September.

August 21-31 domestic sales of 405,080 set a record for the period and were the highest for any reporting period since the last 10 days in March, 1977 (416,872).

The third-period number, up 70.86 percent from 237,078 in 1984, was greater than the sum of the first two reporting periods when sales were dampened by the car haulers' strike and a market lull prior to the introduction of major incentives by the major auto makers.

The domestic sales tally for the entire month was 744,764, up 23.42 percent from 603,463 a year earlier.

Imports, moving with a momentum based on popularity rather than financing or rebate programs, were up 21.04 percent for the month to an August record of 255,931 from 211,449. The industry total moved ahead 22.80 percent, to 1,000,695 from 814,912.

The import share of the market dropped to 25.58 percent in August from 29.52 percent a month earlier, and was down slightly from 25.97 percent of the total in August, 1984.

Total industry sales January through August were up 4.87 percent, to 7,532,244 from 7,182,575. Domestics were up 2.87 percent, to 5,692,956 from 5,533,924; imports totaled 1,839,288, up 11.56 percent from 1,648,657 in 1984.

August domestic sales returns showed losses for American Motors and Honda, with sizeable increases for the other companies.

GM prices up $400 for '86; 12-month hike near $1,000

By John K. Teahen Jr.
Managing Editor

General Motors has announced its 1986 car prices—almost.

The corporation said its new models will be increased an average of 3 percent over comparably equipped 1985 cars. But GM refused to say how much that 3 percent amounts to in dollars.

Automotive News has computed the average increase at about $400.

When the 1985 models arrived, GM said its average-equipped car was $12,931. Then the company raised prices an average of $296 on Jan. 2, bringing the average-equipped price to $13,227.

Three percent of $13,227 is $396.81—call it $400. And the average-equipped GM car now carries an estimated sticker price of $13,624.

GM car prices have gone up an average of nearly $1,000 in the 12 months since the end of the 1984 model year.

There were no changes in dealer discounts or destination charges on the 1986 models.

This is believed to be the first time since the 1960s that GM has failed to place a dollar figure on its price hike.

The next question is what will Ford Motor Co. and Chrysler Corp. do. Neither company announced any price action last week and there is no assurance that they will follow GM's lead.

GM is still nominally the pacesetter for prices in the domestic auto industry, but now GM seems to set the limit of how far its rivals *can* go, not necessarily how far they *will* go.

At introduction time last year, GM prices rose an average of $292, but Ford settled for $153 and Chrysler for $125. Early in 1985, GM tacked on another $296, while Ford's hike was $200 and Chrysler's was $106. One reason for the difference is that GM offers so many more big cars than its rivals.

As noted, GM car prices have gone up nearly $1,000 in the last 12 months—$292 last fall, $296 in January and an estimated $400 now.

And the 3 percent—or $400—average may be even higher when GM prices its full lineup. The current jump does not include a number of popular lines that will be stickered shortly before they go on sale in November.

Those cars are the redesigned

Cavalier tops 'em all

Chevrolet's sales leader

The nation's best-selling car during the 1985 model year was the Cavalier from Chevrolet. For 1986, versions range from the base Cavalier through CS and RS to a new sporty model, the Cavalier Z24. The 2.0-liter, four-cylinder engine with electronic fuel injection is standard. Story, other pictures are on Page 44.

Service Index shows gains in most areas

By Jack Walsh
Service Editor

After an unimpressive showing in June, service and parts volume in the nation's franchised car-truck dealerships rebounded in July with good gains in most key shop areas.

According to the Automotive News Service Index, shop business during the month was 8.2 percent higher than results reported for July, 1984. In June, service and parts volume was only 0.8 percent greater than the same month a year earlier.

For the first seven months of 1985, shop volume was up 8.7 percent over the corresponding period a year ago, with impressive increases in all six indicators used in the survey.

The biggest gain in July was in the number of repair orders written, customer-paid and warranty. The total was 15.8 percent higher than the number written in the same month last year.

Gross profit on all labor, parts and accessory sales, the most important indicator from a dealer's viewpoint, was up 8.5 percent. Total labor sales, customer-paid and warranty, showed an increase of 8 percent.

July sales of parts and accessories to off-premises customers were 6.6 percent higher than last year, while the total P&A volume for the month was up 4.6 percent.

Sales of shop parts, those used on customer-paid and warranty repairs, advanced the least during the month, and were only 1.9 percent higher than last year's total.

Through July, the leading indicator was total labor sales, which were up 11 percent over the like period in 1984. Customer-paid and warranty repair orders written showed a gain of 9 percent.

Gross profit on all labor and P&A sales for the seven-month period was 8.7 percent higher than a year ago, while sales of parts used in the shop on customer-paid and warranty work was up 8.4 percent.

P&A sales to outside sources through July were 6.6 higher than last year, while total P&A sales showed a gain of 5.7 percent.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's franchised new-car/truck dealerships.

SERVICE INDEX
108.2★

	July, '85 vs. July, '84	7 mos., '85 vs. 7 mos., '84
Gross Profit on All Labor and P&A Sales	+8.5%	+ 8.7%
Repair Orders Written	+15.8%	+ 9.0%
Total Labor Sales (Customer & Warranty)	+8.0%	+11.0%
Shop Parts Sales (Customer & Warranty)	+1.9%	+ 8.4%
Sales of All P&A	+4.6%	+ 5.7%

★—Survey by Automotive News shows that dealers' service and parts business in July, 1985, was 108.2 percent of business in July, 1984. Service business in the first seven months of 1985 was 108.7 percent of business in the corresponding period in 1984.

DOT refuses to kill passive-restraint rule

By Jake Kelderman
Washington Reporter

WASHINGTON.—The Department of Transportation last week told Rep. John Dingell, Michigan Democrat, it would not rescind its controversial passive-restraint requirements as he had asked.

Dingell had maintained that air-bag technology has not been proven and that the detachable automatic belts DOT has suggested as one alternative would be no more effective in increasing belt usage than manual belts.

Rejecting his assertions, DOT Secretary Elizabeth Dole said that far from being ineffective, her decision to require either passive belts or bags if states with two-thirds of the U.S. population do not pass mandatory seat-belt-use laws was a well-balanced approach to occupant protection.

In rejecting Dingell's request, Dole also denied petitions brought by consumer groups and insurance companies to require passive restraints even if states with two-thirds of the U.S. population pass mandatory seat-belt-use laws.

She also refused once again to say whether existing mandatory belt-use laws in states like New Jersey, New York and others are sufficiently strong to fall within the criteria spelled out by DOT under its initial Standard 208 ruling.

That ruling held that the minimum criteria for such laws would be that:

1. Each front-seat occupant must be belted at all times; waivers would be granted for medical reasons only.
2. The minimum penalty for violating the law would be $25 per occupant (this may include court costs).
3. Non-use of a belt may mitigate damages.
4. There must be a program to encourage compliance with the belt-use laws.
5. The effective date of any belt-use law must be no later than Sept. 1, 1989.

Critics of the department's stance on passive safety systems believe that if the pass/fail threshold for use laws is "lax," the net effect might be to have no more protection than there is today.

Dole said she wanted to think about the minimum criteria requirements some more and that she would respond to requests to reconsider them "at a later date."

Meanwhile, DOT said it is proposing to grant manufacturers the right to count any automatic-restraint vehicles produced in the year before the rule goes into effect toward the first year's requirements and would also allow manufacturers to count excess vehicles from one year as a credit in the next. It denied a request for "carry-back" credits.

Will make it in second half of 1985, Dedeurwaerder says

AMC close to break-even point

By Edward Lapham
Marketing Editor

GROSSE POINTE SHORES, Mich.—American Motors, with plans to sell 50,000 of its new 1986 Comanche compact pickup trucks, should "break even," in the second half of this year, President Jose Dedeurwaerder said last week.

"That means not losing any money," Dedeurwaerder said at a press preview of the company's 1986 models. "And that's all right." AMC posted a net loss of $99.4 million for the first half of 1985, but earned $15.5 million for all of 1984.

The Comanche, AMC's only all-new offering for 1986, will be available in 2WD and 4WD configurations. Base sticker price for the 2WD version is $7,049, making it the lowest-priced Jeep, according to John W. Mowrey, product planning and design vice president. Base sticker for the 4WD version is $8,699.

The truck will be available with three engines: Standard 2.5-liter L-4, plus 2.8-liter V-6 and 2.1-liter L-4 turbodiesel. The 4-speed manual transmission with floor shift is standard; 5-speed overdrive manual and 3-speed automatic are optional.

Dedeurwaerder said he expected total U.S. new car sales in the 1986 calendar year to total 10.3 million. AMC will sell 130,000 cars next year, he said.

At a press conference following the presentations, Dedeurwaerder said AMC "needs an efficient plant" to remain competitive.

Prodcution at the company's Kenosha plant is scheduled to end in 1988 and AMC must decide by "spring of next year" if it will build a new plant or modernize an existing one if the efficient plant is to be on-stream by 1989, he said.

Dedeurwaerder said AMC needs "government assistance," meaning tax abatements and other usual inducements, to build a new plant.

He also confirmed that AMC is talking to Taiwanese auto makers about the possibility of further collaboration.

Mowrey said AMC is "studying" the minivan market and that it represents "just one of several opportunities" for the company.

Deuderwaerder also confirmed that part of AMC's national ad campaign for 1986 will involve independent product performance comparisons between the Renault Alliance and Toyota Corolla plus the Renault Encore and the Ford Escort.

A Renault official in attendance confirmed that AMC will introduce a 2.9-liter L-6 engine next year to replace the V-6 engine, which AMC currently buys from General Motors.

A sleeker Alliance

New front end for AMC-Renault leader

The Alliance L is back for 1986 with a new front-end treatment that gives it a sleeker appearance. The black grille, which is surrounded by chrome, and new low-profile rectangular headlamps all contribute to the new look. Inside, the Alliance L sports the restyled instrument panel that is common to all Alliance and Encore models this year. Story, other picture are on Page 47.

Toyota sociable

DETROIT.—Toyota has not ruled out states with other Japanese car plants in its quest for a U.S. plant site. Automotive News incorrectly reported otherwise last week.

Yugo has not applied for CARB certification

SACRAMENTO.—No application for certification has been made to the California Air Resources Board on behalf of the Yugo—the $3,990 Yugoslavian-built subcompact. Such certification is required for a car to be sold within the state.

A consumer who purchases a Yugo in another state, however, could bring it to California and have it registered if it passed California's used-car emission tests. Those tests are less stringent than the tests for new cars.

White rules out any contract of that type

Canadian UAW harpoons Saturn

By Marjorie Sorge
Labor Editor

TORONTO.—The UAW-Canada will not accept a Saturn-type agreement in its bargaining with any corporation, according to Robert White, president of the new organization.

He told the 800 delegates to the group's founding convention here last week, "I want to say to the corporations in Canada that we are not opposed to change, we are not opposed to innovation—we have shown that in collective bargaining—but we have absolutely no intention of breaking up our collective agreements or setting up separate enterprises and starting down the road to enterprise unionism in Canada."

The formal name of the new labor organization is National Union, United Automobile, Aerospace and Agricultural Implement Workers of Canada. It will be known as UAW-Canada. White was elected president at the convention.

He said the Saturn agreement should be put in perspective as an agreement between two executive groups—the UAW International Executive Board and General Motors—that has not been ratified by the workers. The agreement was negotiated before any workers were hired.

While White did not say whether he believed the agreement would work, he did say problems could arise from taking those workers out of the GM master agreement and placing them under a separate, very different pact.

The international UAW has also negotiated other agreements with flexible work rules and different wage rates at Mazda and New United Motor Mfg., Inc., and those pacts have been critized by some international members.

White also told the founding convention that the Canadian UAW may not get its $24 million ($36 million Canadian) divorce settlement from the international union until the UAW's constitutional convention next May.

If that is the case, the Canadian UAW may seek a loan from the international for "not much less than $36 million," White said at a press conference following his remarks.

He said the problem does not stem from a clash with the international leadership; it is simply a constitutional, legal question.

Since March, the international UAW has been putting Canadian dues into a separate fund which currently amounts to about $5 million. That fund also contains the $24 million.

White also told the delegates that the days of concessions are gone and the Canadian UAW wants to put Chrysler back on track with General Motors and Ford.

After 50 years of marriage, the Canadian UAW voted to split from the International UAW last December after the two sections disagreed vehemently on the future philosophies of the union and on how collective bargaining should be handled in Canada.

UAW President Owen Bieber was invited to last week's convention, but he did not attend. Bieber and UAW Secretary-Treasurer Raymond Majerus sent a message.

"As you embark on this course of independent action, we hope that the needs and desires of your members will be well served," they said."While we wish you Godspeed, our greeting is tempered by intense sadness. For nearly 50 years we shared a common struggle and together built a strong union.

"Although we disagree with your decision to separate we, of course, respect it and, as with

Desta APV headed for U.S.

Automotive Imports & Marketing, Phoenix, announced a $100 million contract to import the Desta APV beginning this year. The vehicles, built in Greece under license from a German firm, are to be priced from $5,000 to $6,500.

Price targeted below $5,000

Greek Desta to be sold in U.S.

By Kathleen Hamilton
Assistant Managing Editor

Another under-$5,000 vehicle from an unlikely exporting nation is headed for the U.S.

It's the Desta APV, assembled in Greece, using mostly Ford of Europe mechanical componentry.

Its importer says it will be naming an East Coast distributor within weeks, and the first dealers will be operating within four months after that appointment. It expects to sell 20,000 vehicles in the region during the first 12 months of operation, and to have dealers operating across the country within 18 months of startup.

If things go according to plan, Desta's importer will be the third company from a small-car-volume nation within a year to introduce a low-cost vehicle to the American market. Yugo, built in Yugoslavia, went on sale last month at a base price of $3,990. Hyundai, from the emerging car-building nation Korea, is scheduled to be introduced later this model year, priced between $5,000 and $6,500.

Japan's Suzuki—already selling cars here through General Motors—also is planning to introduce a low-cost multipurpose vehicle to the U.S. this fall.

• Desta's importer is Automotive Imports & Marketing, 2600 North Central Ave., Phoenix, AZ 85004, telephone (602) 263-1990. President Ronald Barreto said AIM is a new, privately held company formed to import the vehicles. He declined to name his partners.

The vehicle is built under license from Inthelco, based in Munich and headed by Managing Director Peter Kondogouris, Barreto said. Inthelco is building a plant in Bavaria, and it expects to soon be building most of its U.S.-bound cars there.

Kondogouris and his brother are the principal owners of Namco, the Greek producer of the vehicles. Before forming AIM, Barreto said he was director of Namco export sales, based in Panama.

The companies have until now produced an earlier-generation all-purpose vehicle based on Citroen and, before that, Chrysler Europe, componentry. Other four-wheel-drive and six-wheel-drive civilian and military vehicles also are built for Inthelco by Farmobil A.G., Barreto said. Those won't be coming to the U.S., at least initially. But they are exported to about 15 South American, European and African nations, he said.

The Desta APV headed for the U.S. will be fitted with Ford of Germany's new 1.6-liter engine and other Ford of Europe componentry including transmission, Ford confirmed. Ford developed the fuel-injected 1.6 with three-way catalyst to meet new German exhaust standards, and it should have no trouble meeting U.S. standards as well, a Ford spokesman said. Ford has no plans at this time to use the engine in any U.S.-bound Fords, he said.

Barreto read to Automotive News a section of Inthelco's contract with Ford of Europe. It seemed to indicate Ford dealers would warrant the Ford mechanicals and notify owners in cases of recalls. But both Ford's U.S. spokesmen and Barreto said the U.S.

On heavy-duty vehicles

EPA OK's certification via fines

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—For the first time, EPA has acted to allow manufacturers that do not meet EPA emission standards to earn engine and vehicle certification by paying fines.

The action is part of two EPA enforcement rules on new emission standards for heavy-duty vehicles.

They include a final rule establishing general guidelines for nonconformance penalties (NCP) for makers of heavy-duty vehicles and engines, and a proposed rule that would set actual limits and fines for various pollutants.

The EPA issued its final rule and will proceed with its proposed rule based on unusual "regulatory negotiations," which entail EPA consultations with manufacturers and environmental groups as part of the rulemaking process.

The proposed rule sets penalty amounts for specific pollutants including particulates, hydrocarbons, carbon monoxide and nitrogen oxide.

The penalties range from $41 to $1,980 per engine and are intended to reflect the cost of producing engines that would otherwise comply with the more-stringent heavy-duty-engine standards that go into effect with the 1987 model year.

EPA said the nonconformance penalties are designed to aid "technological laggards," those makers who because of a lack of resources or engineering capability cannot meet the timetable for compliance laid out by the agency.

• Manufacturers had argued—and Congress agreed when writing the law—that without the NCP option, some manufacturers of heavy-duty engines and vehicles could be driven out of business because of insufficient time to meet the new heavy-duty standards.

Those standards may require them to utilize catalysts for gasoline engines and particulate traps for diesel engines.

Under EPA's plan, manufacturers of engines that do not meet federal emission standards, but do not exceed designated upper limits, can win certificates of conformity in return for the payment of penalties. The penalties would be paid on a quarterly basis.

The agency's final "generic" rule describes EPA's test procedure called "Production Compliance Auditing" as well as a penalty formula to determine the dollar amount of noncompliance penalties. The rule also establishes that "upper limits" are to be set for pollutants, beyond which manufacturers will not qualify for the NCP and their engines or vehicles will not be certified.

EPA's proposed rule would set the actual upper limits for emissions and the nonconformance penalties for the specific emissions standards, taking effect in model years 1987 and 1988.

In most instances, the previously applicable emission standard serves as the upper limit. For example, for the 6.0 gram per brake horsepower per hour (g/BHP-hr) 1988 nitogen-oxide standard, the previous standard of 10.7 grams serves as the upper limit. In cases where there is no previous standard, EPA proposes the upper limit.

For instance, EPA proposed that the upper level for particulates be 0.80 or 0.95 g/BHP-hr. In this case, the proposed upper limit of 0.80 gram would exceed the new standard by 33 percent, while the 0.95 gram upper limit would exceed the standard by 58 percent.

Although they have participated in NCP negotiations, some environmentalists expect few noncompliance penalties to be paid.

The Natural Resources Defense Council is suing EPA because the group feels the heavy-duty emissions standards are not strict enough. An NRDC spokesman has said most manufacturers will be able to meet the new standards even without the unusual penalty arrangement.

Japanese pledge effort to buy more in U.S.

By Jack Walsh
Service Editor

CHICAGO.—The leader of the Japanese automotive-parts buying mission said the group was impressed by products exhibited at the Automotive Parts & Accessories Assn. show here, and he pledged to "continue efforts to expand the purchase of parts and components from the U.S."

Tsutomu Oshima, senior managing director, Toyota Motor Corp., said the Japanese automotive industry expects imports of U.S. products to increase from $170 million in 1981 to approximately $300 million in 1985.

As a result of the buying mission's activities and the expansion of Japanese vehicle assembly in the U.S., he added, "We expect local procurement of parts and accessories, both for new vehicles assembled in the U.S. and for the servicing of used vehicles, to increase from $380 million in 1981 to $1.4 billion in $1985, with more increases in the years ahead."

Oshima emphasized, however, that "because of the nature of the automotive parts business, successful contracts involve a relatively long preparatory and evaluation process, including design, experimental production and field tests on samples."

"Nevertheless," he continued, "talks at the Chicago show undoubtedly have developed a solid base for future business transactions among Japanese auto makers and parts distributors and U.S. suppliers."

At a press briefing at the close of the three-day show, Oshima said Japan hopes that U.S. parts manufacturers "will make further efforts to supply parts and components that meet the quality, performance and price standards of Japanese motor-vehicle manufacturers by fully recognizing the special characteristics of our compact and subcompact models."

During the show, he said, members of the Japanese mission conferred with representatives of 252 U.S. suppliers, resulting in the "possible purchase" of 282 items.

Sample orders and/or quotations were requested for 108 prod-

Hanna signs with Oldsmobile

John E. Hanna, second from right, is congratulated by R.W. Dudding, second from left, Oldsmobile's St. Louis zone manager, on signing for John Hanna Oldsmobile, St. Louis. Also shown are: C.A. Sachs, left, assistant zone manager; E.A. Kellogg, center, zone service manager, and Quentin Jones, St. Louis metro district manager.

Association seeks to abolish tax burden

Widening Japan's import market

TOKYO.—The Japan Automobile Importers Assn. (JAIA), which is comprised of 45 dealers and importers, asked the Japanese Government to abolish import taxes on up to 100,000 cars annually, starting in 1986.

Documents detailing the request, prepared by JAIA and designed to spur expansion of import-car sales, were presented to Prime Minister Yasushiro Nakasone and to the Finance Ministry, Transport Ministry and Ministry of International Trade and Industry.

Jiro Yanase, JAIA chairman and president of Yanase & Co., Ltd., said some measures for promoting foreign-car imports are necessary to redress the current imbalance in the automobile trade area.

However, a Finance Ministry official indicated that measures favoring only imported cars are difficult to adopt because the ministry lacks the funds to finance them.

Currently, the commodity tax on imported cars of up to 2,000-cc engine displacement (small cars) is 18.5 percent, while the tax on cars above 2,000 cc (large or regular cars) stands at 23 percent, levied on CIF prices (comprising cost, insurance and freight).

• According to Teruo Ishii, Yanase public relations manager, tariffs on imported cars were abolished in 1978.

In 1981 the commodity tax on small cars was raised to 17.5 percent and to 22.5 percent on large cars. The current tax became effective in 1984.

Although the market-opening action program recently announced by the Japanese Government promises to simplify import procedures to alleviate trade friction with other countries, Ishii noted that commodity taxes on cars are imposed after the cars have cleared customs.

After peaking in 1979 at 60,161 units, import-car sales in Japan dipped by more than 30 percent—38,110 were sold in 1982—before recovering to 41,982 in 1984. Sales are expected to reach 50,000 units in 1985.

Car sales in Japan in 1984 totaled 3,041,931, comprised of 2,999,949 domestic units—98.6 percent of the market—compared with 41,982 imported units—1.4 percent.

Ishii said that if the request is granted, a breakdown of the 100,000 tax-free imports would consist of 60 percent small cars and 40 percent large cars.

The key to selling 100,000 imports in Japan, according to Ishii, is to increase the sale of U.S.-made vehicles.

In 1979, Ishii said U.S. firms sold about 17,000 units for approximately 27 percent of the Japanese import-car market. Last year sales dipped to 2,382 units, while sales in the January-June period of this year totaled 951, down from the 1,217 units sold during the similar period of 1984.

U.S. shoots down Sgt. York gun built by Ford

The Defense Department abruptly scrapped Ford Aerospace's multibillion-dollar Sgt. York anti-aircraft weapon system late in August, but a company spokesman told Automotive News the cancellation will have "minimal financial impact" in part because the program had become a losing proposition.

Claiming that the tank-mounted, gun-based system is unreliable and has insufficient firing range, Defense Secretary Caspar Weinberger said he could not justify continuation of the contract.

The government had invested $1.8 billion in the program and will realize a savings of about $3 billion by its cancellation, according to Weinberger. Based on testing, Weinberger contended the Sgt. York system offered inadequate defenses against Soviet helicopter and aircraft strikes.

The Army has already taken delivery of 65 units and had planned to acquire another 553.

DEALERS,
Fasten your seat belts—RVIA is riding off in new directions at the 1985 RVIA National and Western RV Shows!
This year, there's more to see and more to do than ever before: manufacturers' latest models, suppliers' new aftermarket technology . . . half a million square feet of RVs just waiting for you!
Write your own ticket to success at RVIA's Financial Seminar for Dealers—15 topics to choose from and experts to answer all your financial questions!
Let's get this show on the road! It's green lights all the way to the 1985 RVIA National and Western RV Shows.
YOUR TICKET TO RIDE
RVIA '85
LOUISVILLE/DODGER RV SHOWS

33rd Annual Recreation Vehicle Show

Nov. 5-7, 1985

Dodger Stadium Los Angeles, CA

Featuring:

- ▶ 270,000+ square feet of RVs and supplier technology plus manufactured housing!
- ▶ Wednesday Night All-Industry Bonanza!

This is THE RV show sponsored by RV Manufacturers and Suppliers!

Nov. 5-7, Trade Only—Not Open to Public

Nov. 9-17, Open To Public

For Dodger Attendance and Exhibit Information:

Competition for U.S. sales 'brutal,' says Greenwald

SAO PAULO, Brazil.—Gerald Greenwald, vice chairman of Chrysler Corp., called the company's fight for a share of the U.S. auto market "brutal," and said Chrysler must meet competition worldwide to protect the jobs of 116,000 workers employed in its North American operations

Speaking to an association of Brazilian auto parts manufacturers, Greenwald said the lifting of quotas on Japanese cars means "we now have a completely internationalized market in America. Everybody is competing freely in the U.S.—the domestics, the Japanese, the Germans, the Koreans." "The competition is more than intense, it's brutal," he said. "The U.S. Government estimates that by 1988 foreign nameplates of all kinds, including captive imports and joint-venture vehicles, will have up to 43 percent of the U.S. market."

Greenwald said Chrysler has added 35,000 jobs in the last 48 months. "Almost all of them—all but about 1,000—have been blue-collar jobs," he said.

Greenwald said Chrysler established its International Business Development Group in May to help it compete worldwide by "scouring the world for the absolutely best cost, quality and delivery for parts and components to support our North American assembly operations.

Greenald and Stephan Sharf, Chrysler's executive vice president in charge of the International Business Development Group, are in Brazil to meet with local auto parts manufacturers and government officials.

State profits from auto auction

HARRISBURG, Pa.—The State of Pennsylvania took in $275,000 in one day when 209 old police cruisers, state vehicles and cars seized by law enforcement authorities were auctioned.

The main attractions were cars seized in a drug raid—a 1979 Corvette which was sold for $8,300, and a 1978 Porsche which went for $5,050.

Only one vehicle, a specially built truck used to paint traffic lines on highways, did not sell because no one offered to meet the minimum bid required by the state. Such unusual trucks routinely cost the state $100,000 when new, and the state asked for a minimum bid of $10,000.

Manheim lane opening

Members of the ribbon-cutting party for Manheim Auto Auction's seventh lane opening in Manheim, Pa., arrive by horse-drawn wagon. They are, from left: Jake Ruhl, Art Walters, Chuck Roop, Fritz Cassel and Ed Reese. Ruhl and Walters are two of the original owners of Manheim; Cassel and Reese are retired Manheim general managers, and Roop has been an auctioneer at the site for 28 years.

Market share highest in 21 months

Import registrations rise for June

By Jenny L. King
Detroit Reporter

Registrations of new imported cars in the U.S. in June carved out their biggest share of the total market in 21 months, reflecting the slowed pace of domestic new-car sales compared with a much faster clip for most imports.

First-half import registrations were up 9.29 percent in number and added a percentage point to their piece of the market.

According to figures from R.L. Polk & Co., 256,047 imports were registered in June, representing a 14.33-percent increase over the 223,948 for the same month a year earlier.

With the domestic market experiencing a flat growth rate, import increases caused them to move up to 27.74 percent from 24.14 percent of the month's market.

After six months, the import registration total was up 9.29 percent, to 1,309,811 from 1,198,428. The imports' market share moved to 24.91 percent from 23.90 percent a year earlier.

Toyota was back on top in June, dislodging Nissan from the first-place ranking it held in June, 1984, and gaining 0.76 percentage points over its 1984 share of 20.44 percent. Nissan slipped into second place and simultaneously lost 0.86 percentage points.

Honda was third, losing 0.64 percentage points as it dropped to 18.12 percent from 18.76 percent. It was only the second time this year that Honda failed to earn first place. Registration numbers include both imported cars and those assembled at the Honda plant in Marysville, O.

Volkswagen, also a domestic-import figure, edged up 0.03 percentage points as it maintained its hold on fourth place June to June. Mazda was fifth, down 0.06 percentage points, followed by Subaru, down 0.19 percentage points and Volvo, down 0.42 percentage points.

BMW moved into eighth place from ninth a year earlier, Mercedes climbed into ninth from 10th and Audi dropped to 10th from eighth.

Ten imports accounted for 88.82 percent of the market, down from 90.60 percent in June, 1984.

It may have been third in June, but for the first half of 1985 Honda had enough registrations to be first among the imports, with 19.98 percent of the import market, up from 19.66 percent in 1984. Toyota was second at 18.87 percent, a decline of 0.14 percentage points.

Third-place Nissan was off 0.64 percentage points, to 18.08 percent from 18.72 percent. Next was VW, down 0.27 percentage points, followed by fifth-place Mazda, down 0.03 percentage points.

Subaru, Volvo, Mercedes and Audi all slipped in share of the market; BMW was up 0.18 percentage points and moved into ninth from 10th place.

The top 10 makes claimed 88.37 percent of the 1985 first-half market, down from 89.87 percent a year earlier.

Japanese-built cars accounted for 70.70 percent of the June import registrations, up from 70.69 percent in 1984. The West German portion was 13.89 percent, up from 13.48 percent, while U.S. imports grew to 8.77 percent from 8.20 percent. Totals by country of manufacture were:

	June, 1985	June, 1984
Japan	181,019	158,313
W. Germany	35,563	30,184
United States	22,446	16,364
Sweden	12,863	12,053
Great Britain	1,777	1,655
France	1,790	2,757
Italy	629	580
Ireland	0	42
TOTAL	256,047	223,948

First-half registrations included 69.88 percent Japanese-built, 14.17 percent German-built and 8.73 percent U.S.-built. Totals by country of origin for the first six months 1985 vs. 1984 were as follows:

	6 Mos. 1985	6 Mos. 1984
Japan	915,304	841,151
W. Germany	185,650	184,979
United States	114,354	97,280
Sweden	68,983	67,448
France	12,431	15,567
Great Britain	9,545	8,911
Italy	3,544	2,871
Ireland	0	221
TOTAL	1,309,811	1,198,428

Registrations of imported trucks increased 20.14 percent June to June, to 75,625 from 62,950. Totals from the major makers included:

	June, 1985	June, 1984
Toyota	30,252	23,503
Nissan	19,035	17,038
Mazda	9,558	9,000
Isuzu	6,002	4,550
Others	10,778	8,859
TOTAL	75,625	62,950

First-half registrations for imported trucks were 31.87 percent ahead of the previous year, adding to 452,289 compared with 342,991. The top four makers, Toyota, Nissan, Mazda and Dodge, maintained their same one-through-four order, though Mazda truck sales declined year to year.

Toyota was up 35.31 percent, Nissan increased 30.23 percent, Mazda dropped 8.78 percent and Dodge Ram 50 sales were up 74.59 percent. The breakout included:

	6 Mos. 1985	6 Mos. 1984
Toyota	170,492	126,001
Nissan	128,281	98,502
Mazda	51,258	56,192
Dodge Ram 50	35,142	20,128
Others	67,116	42,168
TOTAL	452,289	342,991

Campbell elected

EDMONDS, Wash.—Robert Campbell, Campbell-Nelson Volkswagen, has been elected chairman of the Pacific Northwest Volkswagen Dealer Advisory Council. Pete Lovely, Lovely Volkswagen, Inc., Tacoma, has been named vice chairman.

'86 IROC-Z28s roll

Plant personnel at General Motors' Van Nuys (Calif.) assembly plant give a thumbs-up sign as the first 1986 Chevrolet IROC-Z28 is completed. The IROC-Z28 is the performance version of the Chevrolet Camaro.

Chevrolet begins production of '86 Camaro IROC-Z28

VAN NUYS, Calif.—Production of the 1986 Chevrolet Camaro IROC-Z28, successor to the 1985 version that virtually sold out well before the end of the model run, began Aug. 26.

The IROC option on the Camaro Z28 was introduced in the 1985 model year, a result of Chevrolet's participation in the International Race of Champions. That series pits top-name racing drivers against one another in identically equipped, specially modified Chevrolet Camaros.

"The IROC-Z28 has been a very important car for us," said Robert D. Burger, Chevrolet general manager. "It accounts for about 10 percent of the Camaros we sell, but its image and high-performance reputation affect our entire model lineup in a positive way."

Mechanically, the additional equipment in the IROC sport package includes: Front frame reinforcement, specific steering gear valving, front suspension with specific springs, larger-diameter stabilizer bar, gas-filled Delco/Bilstein shocks and Goodyear Eagle GT tires on 16-inch aluminum wheels.

The IROC package also features: Body-color lower ground effect panels, grille-mounted fog lamps, door panel name decals and lower-body accent stripes.

Engine choices for the 1986 IROC-Z28 are the same as for 1985. A high-output, 155-HP 5.0-liter V-8 is available with the 5-speed manual transmission; a 215-HP, 5.0-liter V-8 with Tuned Port Injection is available with the 4-speed automatic transmission.

EPA asks GM to recall 82,600 cars for vapor fault

WASHINGTON.—The EPA has asked General Motors to recall approximately 82,600 1981 cars because they exceed federal emission control standards for evaporative hydrocarbons.

The request is the first of its kind because the emissions can be present even when the car's engine is not running.

The vehicles are equipped with 4.3-liter engines. Car lines are Buick Century and Regal and Pontiac Grand Prix, LeMans, Catalina, Bonneville and Firebird. EPA also included Chevrolet Malibu and Monte Carlo, but GM said those cars were not part of the order.

California cars are not included in the recall request.

EPA said it has determined that the average of vapor emissions from the cars is 6.6 grams per test, which is more than three times the 1981 federal emission standard.

A statement from GM said: "We believe that the EPA recall order . . . is premature in light of last week's petition by MVMA calling for changes in the test methods used by EPA.

"The EPA's own data shows that the test procedures now employed by the agency are causing an industry-wide problem in meeting the evaporative emissions standard."

EPA said it believes the cars fail to meet the standard because the charcoal canister, which is part of the emission control system used to trap hydrocarbon vapors, becomes overloaded and can no longer prevent the emissions from escaping into the atmosphere.

According to EPA, the charcoal canister is becoming overloaded because the amount of air being drawn over the charcoal is not sufficient to remove all of the trapped hydrocarbon vapors.

GM has 45 days to submit a recall plan or to request a public hearing, EPA said.

Evaporative hydrocarbon emissions consist of gasoline vapors that escape from a vehicle's fuel system, such as the carburetor and fuel tank. In sunlight, those vapors react with nitrogen oxides already present in the air to form ozone, or smog.

BASF completes Inmont purchase for $1 billion

HARTFORD.—BASF Aktiengesellschaft (BASF), of Ludwigshafen, West Germany, has completed its $1 billion purchase of Inmont Corp. from United Technologies Corp., based here.

Inmont, which had sales of approximately $1 billion in 1984, is a supplier of automotive finishes to original equipment manufacturers and aftermarket customers.

The BASF Group manufactures chemicals, plastics, dyestuffs and finishing agents and consumer products including coatings and pharmaceuticals.

The BASF Group also produces crude oil, natural gas, coal and refined petroleum products. Sales of the BASF Group in 1984 totaled $14.2 billion, and net income was $315 million.

Boom time for sales: 405,080 in 10 days

Continued from Page 1

month with a 39.00-percent gain, climbing to 98,325 from 70,736. Ford Motor Co. was up 24.57 percent, to 185,523 from 148,935. General Motors had a 23.48-percent improvement, moving to 429,278 from 347,652.

AMC dropped 34.60 percent in August, to 11,465 from 17,531. Volkswagen was up 2.64 percent, to 6,561 from 6,392. Honda, still feeling the effects of the truckers' strike, slipped 18.25 percent, to 9,987 from 12,217. Nissan reported sales of 3,625 U.S.-built Sentras for the month.

GM cornered 57.64 percent of the August domestic market, up slightly from 57.61 percent a year earlier. Ford sales accounted for 24.91 percent, up from 24.68 percent. Chrysler earned 13.20 percent compared with 11.72 percent in 1984.

AMC slipped to 1.54 percent from 2.91 percent. VW was down to 0.88 percent from 1.06 percent. Honda had 1.34 percent, off from 2.02 percent, and Nissan earned 0.49 percent its first August on the domestic market.

Sales gains for U.S. makes included Plymouth up 43.68 percent; Chrysler, up 24.03 percent; Dodge, up 52.21 percent; Ford, up 29.92 percent; Mercury, up 15.81 percent, and Lincoln, up 15.32 percent.

At GM, Pontiac announced an August sales record, its numbers up 42.57 percent to 76,943 from 53,968. Buick was up 2.56 percent, Cadillac was up 3.17 percent, Chevrolet was up 25.12 percent and Oldsmobile was up 35.28 percent.

Import sales in August included records for Audi, BMW, Volvo, Saab and Jaguar. Audi was up 41.20 percent, to 6,152 from 4,357. BMW was up 85.29 percent, to 7,936 from 4,283. Volvo was up 12.04 percent, to 8,451 from 7,543. Saab was up 39.04 percent, to 3,291 from 2,367, and Jaguar was up 7.08 percent, to 1,392 from 1,300.

Other increases included Honda, up 19.99 percent; Isuzu, up 67.81 percent; Mazda, up 28.17 percent; Mercedes-Benz, up 10.27 percent; Mitsubishi, up 49.76 percent; Nissan, up 6.10 percent; VW, up 95.32 percent; Subaru, up 38.26 percent; Porsche, up 21.99 percent, and Toyota up 9.98 percent.

Domestic intermediates, with 26.86 percent, claimed the largest single piece of the market-class pie. Imports were second with 25.58 percent, followed by compacts at 16.88 percent, subcompacts at 13.97 percent, standards at 8.34 percent and luxury models at 8.37 percent.

Excluding imports, the intermediates' share of the market was 36.09 percent. Compacts had 22.68 percent, subcompacts had 18.77 percent, standards had 11.21 percent and luxuries had 11.25 percent.

Both GM and Ford reported record passenger-car sales for the final August period. GM said it was the fourth highest individual 10-day car sales period in the company's history and the best single period in more than eight years.

Ford was up 79.60 percent for the period, GM was up 73.64 percent, Chrysler was up 76.09 percent, VW was up 5.88 percent, Honda was up 0.11 percent and AMC was down 18.05 percent.

GM earned 56.94 percent of the late-August domestic market, Ford had 26.79 percent, Chrysler had 11.93 percent, AMC had 1.50 percent, VW had 0.89 percent, Honda had 1.37 percent and Nissan had 0.58 percent.

With 10 selling days in the period this year and last, the daily rate was up 70.86 percent, to 40,508 from 23,708.

Chevrolet includes Sprint and Spectrum. Honda combines imports and domestics. Dodge includes Colt, Conquest, Vista. Plymouth includes Colt, Conquest, Vista. VWoA includes Audi, and Porsche through Aug. 31, 1984. Porsche figures began Sept. 1, 1984. Nissan includes Sentras built in the U.S.

Dawkins to head truck programs for Chrysler

DETROIT.—Dale E. Dawkins, who left a vice presidency at American Motors early last month to join Chrysler Corp. (Automotive News, Aug. 5), has been named Program Management Director of Truck Programs at Chrysler.

In his new job, Dawkins will be in charge of the company's full line of truck programs, including minivans and wagons, full-size pickups, sport utility vehicles, full-size vans and wagons, full-size diesel trucks and new trucks approved for production, such as the Dakota N-body mid-size pickup.

Dawkins will report to L. Donald Gschwind, vice president of Program Management at Chrysler.

As AMC's vice president—environmental and safety affairs since June, 1983, Dawkins was responsible for vehicle environmental and safety matters, product analysis, corporate energy management and industrial safety and hygiene.

From 1979 to 1983, he was vice president of AMC's Product Group, which included responsibility for engineering, styling and product planning. From 1977 to 1979 he was vice president of the Marketing Group, which included North American sales and marketing.

Dawkins joined AMC in 1971 after 10 years with Chrysler and four years with Chevrolet.

Toyota U.S. unit in Eurodollar mart

TOYOTA CITY, Japan.—Toyota Motor Corp.'s newly created U.S. financing subsidiary, Toyota Motor Credit Co., will issue about $100 million in five-year straight corporate bonds on the Eurodollar market to secure funds to lend to dealers.

Industry sources consider the bond issue the initial step in a plan to beef up Toyota's U.S. dealer network to handle the cars to be produced at its new U.S. plant starting in 1988.

This will be the first bond issue on the Eurodollar market by a U.S. subsidiary of a Japanese firm.

Plans of assembly plant moving ahead

GM, Suzuki study Canada venture

TOKYO.—General Motors and Suzuki Motors, Ltd., already involved in a joint venture in Japan, are planning a major automotive plant in Canada.

Reports about the GM-Suzuki Canadian joint venture have been confirmed by sources close to Sinclair Stevens, Canada's minister of regional and industrial expansion, who conferred with officials of Asian automotive firms planning to build plants in Canada.

In addition to Suzuki, Stevens talked here with Toyota Motor Corp. and Hyundai Motor Co., of South Korea. Both companies already have announced plans to build assembly plants in Canada.

During his visit with Osamu Suzuki, Suzuki president, Stevens reportedly was told that Suzuki and GM have nearly completed a feasibility study on a major Canadian auto production plant which could represent $400 million (Canadian dollars) or more in investment.

The sources, quoted by Kyodo News Service, said there are still obstacles to overcome before the 50-50 Suzuki-GM joint venture can be confirmed. However, they hinted that if Canada offers facilities where the firms could build small cars at costs similar to those in Japan, the biggest Asian investment yet would follow.

The Suzuki-GM plant would produce a car in the 1,000-cc class for sale in both Canada and the U.S. A firm announcement on the Suzuki-GM venture is expected by mid-autumn, with production scheduled for 1988-1989, about the same time the Toyota and Hyundai plants launch production.

It was noted that the Suzuki-GM plant, if built, would generate additional benefits for the Canadian auto industry as a whole because in Japan Suzuki buys 75 percent of the components for its cars from outside sources.

Still impeding the venture, according to the sources, are questions regarding production costs, and labor and financial incentives which could be offered to make sure the plant was competitive with similar operations in Japan.

If the costs of all the projects outlined to Stevens, including the assembly facility Honda Motor Co., Ltd., is building in Alliston, Ont., were added together, it was noted that the total direct investment in the Canadian auto industry from Asian manufacturers would be close to one billion Canadian dollars.

August output is 552,673, on a par with 1984 total

August auto production of 552,673 units was about the same as (down 0.79 percent) the year-ago month's 557,060—which was the highest production for that month since the 614,493 cars assembled in August, 1955.

Estimated domestic auto production of 121,102 last week fell 10.64 percent from the previous week's 135,522 because of the Labor Day holiday.

Last week's output was 4.73 percent better than the year-ago week's 115,632.

Year-to-date, 5,697,117 cars have been built, 4.09 percent more than the 5,473,402 finished last year at this point.

Companies shared last week's estimated auto output as follows: General Motors, 57.84 percent; Ford Motor Co., 20.24 percent; Chrysler Corp., 16.10 percent, American Motors, 1.85 percent; Honda of America Mfg. Co., 1.86 percent; New United Motor Mfg., Inc., 1.26 percent, and Nissan Motor Mfg. Co., U.S.A., 0.85 percent.

Volkswagen of America's Westmoreland (Pa.) plant was closed for changeover last week.

GM plants in Pontiac (G-cars) and Lansing (Nos. 1 and 2) worked two overtime shifts Saturday (Sept. 7).

Chrysler has scheduled two nine-hour daily shifts this week (Sept. 9) at its plant in St. Louis (No. 2).

Ford also has scheduled daily overtime this week at the following plants: Chicago, Dearborn, Kansas City and Lorain, O.

Wood is silver

BETHEL, Vt.—Newall Wood, owner of Valley Motor Sales, Inc., has received Chevrolet's 25-year-dealer award.

Truck makers set record for August output

Domestic truck makers recorded their highest August production ever, according to company totals: 295,090 units, topping the 283,549 built in August, 1977.

Last month's output was 11.04 percent better than the year-ago month's 265,740.

Estimated production of 60,653 trucks last week was down 12.94 percent from the previous week's 69,670, because of Labor Day, but was 13.18 percent better than the year-ago week's 53,592.

So far this year, 2,364,931 trucks have been assembled, 9.89 percent more than the 2,152,172 finished last year at this point.

American Motors announced that August production of 25,641 Jeeps was a record for the company.

The previous record of 25,317 Jeeps built in March, 1979, included output at both Toledo and Brampton, Ont. All Jeeps are now produced in Toledo.

General Motors' Janesville (Wis.) and St. Louis plants worked two overtime shifts Saturday (Sept. 7).

Ford Motor Co. plants working overtime this week (Sept. 9) are: Kansas City; Lorain, O.; Wayne, Mich., and Norfolk.

Ford's Lorain plant is scheduled to work overtime Saturday (Sept. 14).

Chrysler Corp.'s Warren (Mich.) plant was scheduled to work two overtime shifts Saturday (Sept. 7).

The Warren plant is slated for two nine-hour daily shifts this week.

Canadian cars post best August production ever

August production of 87,752 cars in Canada was the highest ever for that month, topping the former record of 79,424 set in August, 1976.

Last month's output was 17.16 percent more than the 74,897 cars built during the year-ago month.

Because of Labor Day downtime, last week's scheduled production of 20,883 cars was down 15.15 percent from the previous week's 24,613.

Last week's output was 33.16 percent better than the year-ago week's 15,683.

So far this year, 721,664 cars have been completed, 2.57 percent fewer than the 740,734 built last year at this time.

Truck makers assembled 56,934 trucks during August, 12.93 percent fewer than the 65,386 completed in the year-ago month.

Because of the holiday, last week's output was down 13.33 percent from the previous week's 17,560, but was 4.90 percent more than the 14,509 for the year-ago week.

Year-to-date, 585,836 trucks have been assembled, 6.04 percent more than the 552,452 completed last year at this point.

Chrysler dividend is 25 cents again

DETROIT.—Chrysler Corp. directors have declared a dividend of 25 cents per share, payable Oct. 15 to shareholders of record on Sept. 16.

The dividend has been 25 cents since the third quarter of 1984.

60th year—$45 per year, $1.00 per copy

Sprint wins EPA derby at 55 MPG

By Jake Kelderman
Washington Reporter

WASHINGTON.—Chevrolet's Japanese-made Sprint ER, a tiny two-door hatchback with a 3-cylinder 1-liter engine and 5-speed transmision, ran away with the EPA's fuel-economy derby this year, scoring an impressive 55 MPG in city driving and 60 MPG in highway driving.

The Sprint beat out the Honda Civic CRX HF coupe, which took top honors last year. This year, the Honda model managed 52 MPG in city driving and 57 MPG in highway driving. But while ahead of last year's figures, it could not outdo the Sprint.

Sprint is made by Suzuki Motors, of Japan, which is 5-percent owned by General Motors. Suzuki plans to begin selling vehicles on its own in the U.S., starting with the Samurai, a 4x4 sport/utility model that will debut in November. Its own version of the Chevrolet Sprint will be known as the Forsa and will arrive in the 1988 model year.

Following the Sprint ER and the Honda Civic CRX HF in the standings were the Nissan Sentra diesel at 45/50, another version of the Chevrolet Sprint at 44/50, the Suzuki Forsa at 44/50, the Chevy Sprint Plus at 44/50, the Suzuki Forsa V at 44/50, the Ford Escort FS diesel at 41/49 and automatic versions of the Chevrolet Sprint Plus and Suzuki Forsa V at 41/43.

Although is is mentioned often in the above list, the Suzuki Forsa is not available in the continental U.S. It is certified by the EPA for 1986 because it is sold in U.S. territories like Puerto and Guam.

At the bottom of the list, the Rolls-Royce Camargue managed just 8 MPG in city driving and 11 MPG on the open road.

Joining it at the low end were the Rolls-Royce Corniche II/Bentley Continental, Rolls-Royce Silver Spur Limousine and Rolls-Royce Silver Spirit/Silver Spur/Bentley Mulsanne at 9/10 MPG;

GM greets 1986

Oldsmobile Delta 88 has front drive

The Oldsmobile Delta 88 for 1986 is an all-new entry in the sales sweepstakes. It has been switched to front drive and has a 3.0-liter V-6 engine as standard with a 3.8-liter V-6 optional. Story, other pictures on Page 36.

Appearance kit for Pontiac Fiero

For the 1986 model year, Pontiac has given its Fiero SE a black-accented aero appearance package that makes it look different from the Fiero Coupe and Sport Coupe. Story, other pictures are on Page 34.

Incentives reduce stock of new cars to a 9-month low

By Kathleen Hamilton
Assistant Managing Editor

There is only one word to explain the state of domestic new-car inventories this month: Incentives.

Incentives sliced the unit count to a nine-month low and the days-supply level to a three-month low.

Incentives accounted for declines in every market class and for just about every maker.

Because of incentives, 57 of 76 nameplates were in slimmer supply as September opened, compared with Aug. 1. Only 19 car lines had heftier supplies; the reason for 18 of them: No incentives.

There were 1,412,483 new domestic cars in stock on Sept. 1 at factories and dealerships and in transit to dealerships. That was the lowest total since Dec. 1, 1984, when there were 1,405,417. On Aug. 1, in the midst of the car carriers' strike, there were 1,579,595. On Sept. 1, 1984, the total was 1,277,484.

This month opened with an ideal 51-day supply of domestics, compared with a month-earlier total of 64 and a year-earlier level of 57. The latest days-supply level is the lowest since June 1, when there was a 50-day supply of cars.

The industry unit count traditionally declines on Sept. 1 in anticipation of the new model year that usually starts about Oct. 1. But incentives in previous years have not always been as successful as this year's round, so days-supply levels don't always fall like they did this time.

On Sept. 1, there were nine nameplates with days-supply figures of 100 or more. With one exception none of them was covered by an incentive program. Alliance was the exception, but allowance should be given: American Motors' incentive program didn't kick in until there were only eight selling days left in August. General Motors was selling cars at low interest rates or reduced prices seven days before AMC dealers were.

Alliance was also the one car line with incentives that increased its days-supply figure compared with Aug. 1.

Chrysler Corp., GM and AMC, in that order, trimmed their supplies most last month. Chrysler's days-supply figure fell by 24 days; GM's, 16; AMC's, 15; Ford Motor Co.'s, 5; Honda's (domestic only), 3, and VW's, 1. Nissan's domestic

'Studies going on,' McDonald says

Will Opel build Cadillac Cimarron?

By Richard Feast
European Editor

FRANKFURT, West Germany.—Cadillac is said to be studying a proposal to source its 1988 Cimarron replacement from General Motors' Adam Opel subsidiary in West Germany.

There was no confirmation of the project at the auto show here last week, but Ferdinand P. Beickler, Opel chairman, admitted, "Opel will never develop another car that cannot be homologated for the U.S. market."

F. James McDonald, GM president, added, "You've got some interesting products here in Europe. There are some studies going on and there is some great potential."

Any such move must be seen against a background of the comparative sales failure of the current Cimarron and the continuing strong demand in the U.S. for prestige models imported from Europe.

Ford Motor Co. has already joined the trend with its West German-sourced Merkur—though it got off to a slow sales start in the U.S.

• The determining factor will be the exchange rate between the dollar and the deutschmark, currently hovering around 2.90 DM per dollar. A longer-range belief that 2.20 to 2.30 DM will evolve could persuade GM to press ahead, a financial source said.

The current J-car is sold in Europe as the Opel Ascona/Vauxhall Cavalier and in the U.S. as, among other things, the Cadillac Cimarron. All five of GM's car divisions in the U.S. have versions of the J-car.

That range is expected to be replaced during 1988. Given today's flexible manufacturing techniques and modular assembly systems—Opel uses them on the new Kadett—other U.S.-badged models could go down the same lines.

Indeed, some more-imminent new Opels could appeal to the North American market. They are the large V cars (Opel Rekord/Vauxhall Carlton) which will be replaced next fall. Six months later, the more-luxurious V Spe-

Peak sales open month

The U.S. auto makers made it two in a row, notching an early-September sales record following a late-August alltime high. Sept. 1-10 domestic new-car sales of 234,867 were up 56.33 percent from the year-ago 150,240. The former record for the period was 190,493, set in 1955.

General Motors and Ford Motor Co. reported record sales. GM was up 58.84 percent to 132,514 from 83,425 last year. Four of the five GM car divisions etched records. Ford was up 61.91 percent, to 63,674 from 39,328.

Chrysler's 62.84-percent gain was the biggest among the domestics. Its sales totaled 29,622 this year vs. 18,191 in 1984. American Motors reported a 22.35-percent decline, dropping to 3,300 from 4,250.

Volkswagen was up 30.17 percent, to 1,057 from 812. Estimated sales of U.S. Honda Accords numbered 4,000, off 5.53 percent from 4,234, and sales of U.S. Nissans were estimated at 700.

GM earned 56.42 percent of the market; Ford had 27.11 percent; Chrysler had 12.61 percent; AMC had 1.41 percent; Honda had 1.70 percent; Volkswagen had 0.45 percent, and Nissan had 0.30 percent.

Results fall short of Reagan Administration's goals

Japanese buying mission: High hopes fizzle

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—A much-ballyhooed Japanese auto industry buying mission that met with American auto parts companies in Chicago late last month seems to have been long on style but short on substance.

The high-ranking delegation did announce that it had met with representatives of 252 U.S. suppliers, with sample orders or quotations being requested on 108 products.

However, the same officials stressed to representatives of the Automotive Parts and Accessories Assn. and the U.S. Commerce Department that the products contracted for as a result of the buying mission would be intended almost exclusively for U.S. distribution.

That means U.S.-made automotive products will in all likelihood not find their way into the Japanese home market, where most U.S. trade observers believe real trade progress must occur.

Reagan Administration trade negotiators have repeatedly emphasized to the Japanese that smooth trading relations between the two nations depend on greater market access for American goods. A Commerce Department official said that a Japanese practice of buying U.S. auto parts for redistribution only in this country would be short of the Administration's goals.

The Japanese auto industry buying mission went to Chicago for the APAA show, which was held Aug. 26-28. The trade show had been long planned, while the mission was speedily arranged after a July meeting in this country between Commerce Secretary Malcolm Baldridge and Japanese Trade Minister Kejio Murata.

Although followup meetings are planned with additional U.S. auto parts manufacturers, the importance of the Japanese trade visit is being questioned because of the mission's willingness to meet only with U.S. manufacturers of "low-technology" goods of the most inexpensive and least labor-intensive variety.

The Japanese manufacturers were described by show participants as being "reluctant" to meet with manufacturers of more sophisticated and expensive components. One exhibitor complained that "if your products were not on

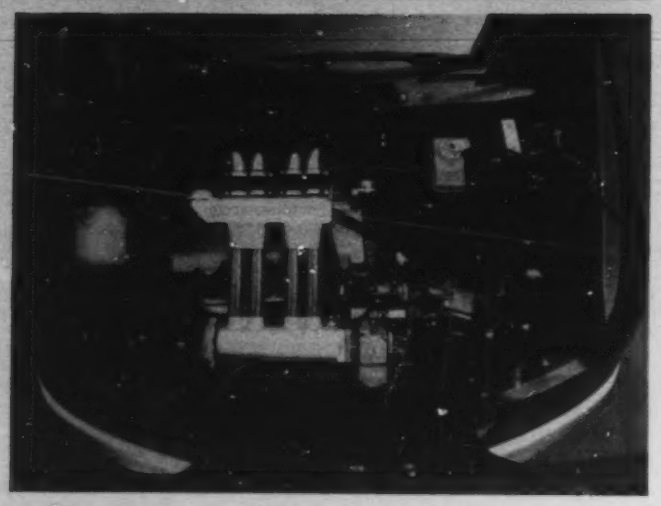
NEWSPAPER



High-tech Eltec

Ford of Europe's high-tech research vehicle, the Eltec, is a front-drive, five-door sedan bristling with electronic controls. The power plant is a light-alloy four-cylinder 1.3-liter engine. The body is reminiscent of recent Ford thinking as far as front and rear-end treatments are concerned, and the interior treatment could be out of one of today's cars. Eltec has flush-fitting glass, an electronically controlled sunroof and deployable underbody aerodynamics components.

Decision on Canadian site due this month

Will Hyundai build a U.S. plant?

By Richard Johnson
Detroit Reporter

Hyundai Motor Co., the South Korean auto maker which plans to produce cars in Canada before the end of the decade, may soon consider building an auto assembly plant in the U.S.

Meanwhile, a spokeswoman for Hyundai Auto Canada said a decision on where to locate the company's announced Canadian plant is scheduled to be made this month.

While labeling talk of U.S. car and parts manufacturing facilities "premature," a Hyundai Motor America representative said last week that the company's actions in Canada could foreshadow U.S. strategy.

Hyundai, which began selling cars in Canada 20 months ago, announced plans to construct an $18 million parts plant near Toronto earlier this year, and late last month said it would build a $150 million car-assembly plant in Canada.

In January, Hyundai will begin selling its Pony Excel subcompact in the U.S. through a dealer network expected to be 200-strong by late 1986.

"We can't make any plans until we know how the U.S. market will receive our car," said Bruce Matthias, Hyundai Motor America's national public affairs manager.

"But I will point to what we have done in Canada as a substantive indication. We don't wait 20-25 years until our brains are beat out politically before we start to build plants in nations where we are importing."

Hyundai officials in Korea have made it clear that they want to be viewed as a good trading partner. In announcing the Canadian plant recently, Hyundai President Chung Se Yung said, "We believe that first and foremost, our company must act as a good corporate citizen wherever we do business."

Hyundai hopes to sell 100,000 cars here next year on the East and West coasts and through the Sunbelt. The front-wheel-drive Excel subcompacts will be priced between $5,000 and $7,000.

• In late 1986 or early 1987, Hyundai plans to launch the compact Stellar sedan in the U.S., and it is planning another model in 1988.

Asked if the South Korean company will consider a U.S. car plant after its cars go on sale next year, Matthias said, "Oh sure. If our cars are received in the U.S. with a level of enthusiasm comparable to the way they are being received in Canada, that would be a possibility. We would look into it."

He also said a parts manufacturing facility in the U.S. "is a possibility."

The Hyundai Auto Canada spokeswoman last week said a decision on where to locate the new Canadian plant is scheduled to be made in September. She said the firm is awaiting the results of a survey by Lavalin International, Inc., a Montreal-based consultant

Smith predicts bigger market share for GM

By Mary Connelly
Detroit Reporter

General Motors Chairman Roger B. Smith predicted last week that GM will increase its market share "substantially" in the 1986 model year and that growth in car sales will outpace growth in trucks.

GM lost about 3 percentage points in market share during the first 11 months of the 1985 model year, falling to 42.33 percent of the industry total.

Smith also predicted that U.S. vehicle sales for the 1985 model year will set a record of 15.4 million units, surpassing by 100,000 vehicles the previous peak reached in 1978. It would be only the second time in history that U.S. sales have exceeded 15 million cars and trucks.

GM anticipates sales of 10.8 million cars and 4.6 million trucks in the 1985 model year with the truck sales also breaking a 1978 sales record of four million.

U.S. vehicle sales for the 1986 model year could also top 15 million, Smith said, adding that another record year is possible if the Federal Government resolves trade and budget deficits and tax reform.

Smith said he agreed with forecasts that current economic growth rates will not be sustained throughout 1986 unless such issues are tackled.

"We have a real shot at surpassing 15 million units once again, and perhaps another new record if everything works the way we hope it will," Smith said of the 1986 model year.

Smith blamed a loss of GM market share in the 1985 model year on strikes by the UAW in the U.S. and Canada last fall and plant shutdowns due to model changeovers.

"I look to a substantial increase in market share in 1986 with the new models," Smith said. He cited new sedan versions of the Pontiac Grand Am, Buick Skylark and Oldsmobile Calais; the new front-wheel-drive Buick LeSabre and Oldsmobile Delta 88, and the redesigned Buick Riviera, Oldsmobile Toronado and Cadillac Eldorado and Seville.

Although truck sales have been strong, Smith said growth in car sales will exceed that of trucks because of the new models.

Substantial across-the-board cuts in the workforce are "behind us," Smith said, adding that future reductions will come primarily through attrition.

Smith discussed those matters

Toyota to import Toyotas from U.S. to Japan

TOKYO.—For the first time in its history, Toyota Motor Corp. will import motor vehicles for sale in the Japanese market.

As part of a program to increase imports to Japan, Toyota said it will "re-import" its Celicas from the U.S. after they are customized into convertibles by ASC, Inc., Southgate, Mich. Ten sample cars, which will be left-hand drive, will be imported later this year.

Toyota said the date for putting the convertibles on sale and the number to be imported will be decided after the company completes a study to determine how many of the cars can be absorbed by the Japanese market.

Toyota said it will be the first Japanese auto maker to import cars it has exported from Japan.

Electronic vehicle displayed at Frankfurt

Ford Eltec a hint of the future

By Richard Feast
European Editor

FRANKFURT, West Germany.—Ford of Europe's high-tech research vehicle, shown publicly for the first time last week at the Frankfurt Motor Show here, is a pointer to what its cars will be like in a decade.

The Eltec (Electronic Technology) is a front-drive, five-door family sedan that bristles with electronic controls.

The EEC-IV control system is responsible for the engine, the continuously variable transmission, the air suspension which reacts to both load and speed, the anti-lock brakes, engine cooling, preventing the wheels from spinning and the vehicle's entire electrical system.

It is a joint project between Ford R&D teams in the U.K. and West Germany. It was 18 months in preparation and will undergo a further two years of research.

Ford predicted that fuel economy of better than 42 MPG can be expected in city driving.

• Mike Westbrook, Ford's manager of electronic research, said, "Eltec incorporates some of the most advanced examples of electronics working for the customer yet seen. Although the car is futuristic, its emphasis is on practical, viable systems which can be used on ordinary production cars within the next decade."

Eltec's power unit is a light-alloy four-cylinder 1.3-liter engine. It features two inlet valves and one exhaust valve per cylinder and produces 70 BHP.

The body, while futuristic, is reminiscent of recent Ford thinking as far as the frontal and rear-end treatments are concerned. It has flush-fitting glass and an electronically controlled sunroof.

Ford said the body has a revolutionary metallic paint that will retain a showroom shine throughout the life of the vehicle. Final body construction was completed by Ford's Ghia operation in Turin.

Among Eltec's other features are an anti-lock and wheelspin control developed in conjunction with Kugelfischer and the use of Uniroyal Conti's new tires which eliminate the need for a spare.

The Conti tire fits onto the outer face of the wheel rim, so that if a tire loses pressure the car can still be driven without damaging the tire. A radio signal informs the driver if the tire is damaged.

Lane seeks increased share, too

Olds shoots for a million again

By Louise Kertesz
Detroit Reporter

BIRMINGHAM, Mich.—William W. Lane, Oldsmobile general manager, expects the division's dealers to sell 1,175,000 cars in the 1986 model year, 110,000 units (10.33 percent) more than the 1,065,000 it projects for this model year.

• Product story, Page 36

Though Oldsmobile did not reach the record 1,363,000 sales anticipated for this year, "selling over a million cars again can't be all bad," Lane said last week at the national press preview of the division's 1986 models.

Sales of more than a million Oldsmobiles were posted in the 1984, 1979 and 1977 model years.

Lane said that Oldsmobile's goal for 1986 is 11.2 percent of the total market of 10.5 million new cars, up from a current share of 9.9 percent.

A year ago, Oldsmobile's market-share forecast for the 1985 season was 12 percent.

Questioned about the projected increase in market share for 1986, Lane said, "Based on our track record, our optimism is credible. We're currently selling in a strong third place for the 11th consecutive model year.

"In 1975, when we took over third, we had a 78,000-unit lead over fourth place. In the current model year, this lead over our nearest competitor (Buick) has increased to about 152,000 cars," he said.

Asked whether Oldsmobile was closing the gap with the No. 2 seller (Ford Division), Lane said

Light-duties gain; mediums, heavies decline

August truck sales rise 10 pct.

By Joseph Bohn
Truck Editor

Truck sales continued to boom along at record levels in August and for the eight-month period, led by the light-duty segment.

Medium and heavy-duty sales fell off last month.

The general industry falloff in larger trucks was reflected at Ford and Chevrolet. GMC, however, showed a lot of strength in medium-duty sales, nearly doubling its year-ago total. But, like other manufacturers, its heavy-duty count was off.

Tables on Page 32

The industry retailed 345,116 trucks in August, up 9.7 percent from 314,578 a year earlier, according to preliminary reports from MVMA and the manufacturers.

Bolstered by incentives, Class 1-2 light-duty sales were up 10.8 percent in August. The industry retailed 323,210 light duties, up from 291,628 last year.

Sales would have been higher if dealers' inventories hadn't been reduced by an earlier haulers' strike.

Class 4-6 medium-duty sales totaled 4,995 in August, down slightly from 5,012 a year earlier.

Here, GMC bucked an industry trend by chalking up 3,080 medium-duty sales, nearly double last year's 1,558.

Ford's medium-duty tally of 3,077 was off from 3,281; while Chevrolet's total of 1,998 was off from 2,019 last year.

Class 7-8 heavy-duty sales totaled 16,911 last month, off from 17,938 in 1984.

In that segment, Ford retailed 982 trucks, off from 1,081 last year; while GMC retailed 1,137, compared with 1,524 a year ago.

For eight months, the industry retailed 3,162,504 trucks, up 14.4 percent from 2,763,993 a year earlier.

Light-duty sales of 2,973,930 were up 15.1 percent from 2,584,021 in 1984.

Medium-duty sales of 34,293 were off from 38,908 for the eight-month period of 1984.

Heavy-duty sales of 154,281 were up from 141,064 in the year-earlier period.

Chevrolet, buoyed by its Astro, continued to build its lead over Ford.

Chevrolet retailed 102,636 trucks last month, up 22.1 percent from August, 1984.

Ford retailed 85,068 trucks, up 2.4 percent from 83,053 a year earlier.

Calendar-year-to-date, Chevrolet retailed 880,458 trucks, up from 768,671 last year, while Ford retailed 856,834 compared with 781,279 in 1984.

The real race, though, is for model-year leadership.

Through the end of August, Chevrolet trailed Ford by 2,900 units though it appeared to have the momentum to overtake Ford in September.

Chevrolet had truck sales leadership in the 1983 calendar and model year, but lost it to Ford in 1984.

The leadership claim is important for promotional purposes.

Among other nameplates, Chrysler retailed 37,619 trucks in August, up 15.2 percent.

It retailed 423,725 trucks for the eight-month period, up 20.5 percent from last year.

GMC retailed 26,508 light duties in August, up 39.6 percent, and 212,971 for the eight months, up 11.2 percent.

Jeep retailed 13,049 trucks in August, up 19.1 percent, and 165,544 for eight months, up 6.9 percent from a year earlier.

The imports had an uncharacteristic 5.8 percent decline in August on sales of 64,387 versus 68,325 a year earlier.

That was mainly attributable to

Ram tough look

The 1986 Dodge full-size pickups have a new grille, lights and larger bumpers to create a tougher look and improve sheet metal protection.

Dodge revises look, GVWs on '86 trucks

Dodge has refined the appearance of its 1986 trucks, realigned gross-vehicle-weight (GVW) ratings of full-sized pickups and made some equipment changes.

A new grille, headlight bezels and parking lights on full-size pickups are designed to freshen front appearance, while new larger bumpers are intended to create a "tougher look" and improve sheet-metal protection. The standard grille features a painted insert, and the optional grille has a bright insert.

All full-sized pickups have tinted glass as standard equipment. Steel-belted radial tires are available on 15-inch applications of D and W250 and 350 models.

The light-duty conventionals are available in two body styles—Sweptline and chassis cab. The Utiline style was dropped. All feature three-man cabs.

The two-wheel-drive pickups range from the D100 with a new 4,950-pound GVW to the D350 with an 8,700-pound GVW.

GVW ratings for four-wheel-drive models range from 6,300 pounds for the W100 to 8,510 pounds for the W250. A new 8,510-pound GVW for the D and W250 models provides a heavy-duty three-quarter-ton pickup that runs on regular leaded gasoline, except in California.

Wheelbases for D100 through D350 and W100 through 250 pickups range from 115 to 131 inches.

D250 chassis-cab models are available in 7,500 and 8,510-pound GVW ratings on a 131-inch wheelbase, and 350 chassis-cab models are available in 131-inch, 135-inch and 159-inch wheelbases, with GVW ratings of 8,700 pounds to 10,400 pounds.

Oil pressure and engine coolant temperature gauges and trip odometer are standard on 4WD models for 1986 and optional on other models.

There have been equipment adjustments in the three Prospector discount packages.

Electronically controlled torque converters are standard on most 2WD automatic-transmission models.

On the 1986 Ramcharger, an electronically controlled torque converter is standard on 2WD automatic-transmission models.

A new power convenience package combines power front door locks and power front windows.

Ramcharger features a new grille and front and rear bumpers; standard three-passenger rear seats; 15-inch steel hubcaps and optional deluxe wheel covers; eight new clear-coat paint colors;

Jeep eyes big gains with new Comanche

SOUTHFIELD, Mich.—With its new Jeep Comanche pickup, American Motors is entering the compact pickup truck market for the first time this fall.

Derived from the Jeep Cherokee 4WD, the Comanche is being introduced in 2WD and 4WD versions. It will expand Jeep's coverage of the light-truck market to 50 percent compared with 16 percent previously.

Compacts are expected to account for slightly more than half of the projected two million pickup truck sales in 1986.

Within the compact segment, 2WD pickups account for about 75 percent of sales, according to Jose J. Dedeurwaerder, president and chief executive officer of AMC. He considers Comanche a good contender for a share of that.

Comanche is Jeep's first 2WD pickup since 1947.

Comanche features uniframe body construction and Quadralink solid axle front suspension, a 119.7-inch wheelbase, maximum payload of 2,205 pounds, double-walled pickup box and standard 15-inch wheels and tires on both 2WD and 4WD models.

It also offers a choice of two 4WD systems, the Command-Trac part-time transfer case or the Selec-Trac full-time transfer case, both with "shift-on-the-fly" capability.

The 2WD and 4WD models have three engine selections: The new standard throttle body fuel-injected 2.5-liter 4-cylinder, the op-

Please turn to Page 26, Col. 4

Topping it off

Glasstite, Inc., Dunnell, Minn., is offering a full door option for its compact fiberglass pickup topper. The door has a center latching mechanism for easy one-hand opening and a prop/hinge assembly that lifts the door up and back for maximum clearance.

IH nearing truck deal with Nissan

TOKYO.—Nissan Diesel Motor Co. is about to sign an agreement with International Harvester to supply IH with diesel trucks and production technology, beginning early next year, according to a Nissan Diesel spokesman here.

IH Chairman Donald Lennox recently dismissed rumors that IH would enter an agreement to market a Japanese truck.

The Nissan Diesel Motor spokes-man said the firm will start exporting Class 7 trucks with 7.4-liter (452-CID) engines to IH, which will sell them under its own nameplate. Future exports will include medium-duty trucks as well, he added.

Nissan Diesel, currently setting up its own U.S. dealer network, is also negotiating using IH dealers to market trucks with the Nissan Diesel nameplate.

Nissan Diesel will eventually increase IH-bound exports to 3,000 units yearly, equal to 15 percent of its entire 1984 truck output.

It also expects to ship 1,500 to 2,000 trucks to the U.S. for sale through its own dealer network.

truck personnel

Isuzu names Goodwin in product planning

Neil Goodwin was appointed national product planning manager of Isuzu Truck of America, Inc.

His responsbilities include product planning for Isuzu truck and bus chassis.

Prior to joining Isuzu, he was director of engineering at Iveco Truck and previously spent 13 years with Mack Trucks.

Raniszeski appointed in Mack realignment

Mack Trucks reorganized its marketing communications and planning department.

Edward L. Raniszeski, previously director—marketing planning and research, was appointed director—marketing communications and planning.

He has overall responsibility for Mack's advertising, promotion and trade relations efforts, as well as market research, analysis and planning; marketing training and service training.

William E. Restmeyer joined the marketing group as supervisor—trade relations. He is responsible for promotion of Mack's corporate and product image with the trade press, as well as developing and producing collateral literature and editorially reviewing all advertising and related copy.

Joseph D. Molinaro joined the marketing group as manager—market research, with responsibility for managing the non-technical research functions for the company.

Donald C. Vought was appointed manager-service training, with responsibility for Mack's expanding programs of service training and maintenance and administration of service standards and tool specifications.

Mack also restructured its corporate affairs department, naming **Donald R. Miller** director—government relations, with responsibility for laison with federal and state legislators and formulation of positions on matters affecting Mack and the heavy-truck industry.

Joseph J. Smurda became manager—corporate affairs services.

Donald O. Gross joined the department as manager—community relations.

Debra W. Vogel joined the department as editor—corporate publications.

Meanwhile, **Joseph M. Stulack**, manager—sales promotion for the parts marketing depart-

80,000 apply at Wentzville

GM job-seekers tested by state

ST. LOUIS.—The General Motors plant in nearby Wentzville, Mo., teamed up with the Missouri State Division of Employment Security to cope with 80,000 applicants for second-shift positions.

Using the General Aptitude Test Battery (GATB), the state tested 18,881 persons. The tests resulted in 4,823 referrals, according to C. Bruce Cornett, director of the Missouri Division of Employment Security. GM had specified that the worker would have to be 18 years old, work on any shift, be a high school graduate or the equivalent and have completed 18 months of steady work or military service.

At Wentzville, production calls for more diverse and higher-level skills than those required by traditional auto assembly lines. For example, "quality operators" are responsible for learning technologically advanced skills needed to perform as many as 16 different tasks.

The GATB measures skills in five job groupings. One, for example, checks general learning ability, verbal aptitude, numerical aptitude, hand and eye coordination, finger dexterity and manual dexterity—all of which are needed by individuals who build cars at Wentzville.

The GATB's ability to test an individual's aptitude for performing a job well is rated at 53 percent. It is the best predictor for potential employe success that is currently available, state officials said.

In addition to supplying money for job testing and subsequent training, the state saved GM considerable time, money and manpower, Cornett said.

Responses from GM were "very positive." After the entire selection had been completed, Wentzville Personnel Director Tom Pilkington told the state officials that the company was pleased with "the ability and reliability of new workers."

The Missouri Division of Manpower Planning and Private Industry Councils of St. Charles and St. Louis allocated $860,000 and $640,000, respectively, for on-the-job training reimbursements. Funds were for dislocated workers and other long-term unemployed hires.

In addition, more than $250,000 was allotted by the state for reimbursement of approximately 50 percent of instructor costs for new hires' orientation and communication-skills training. It was supported jointly by the Manpower Planning Division and the State Department of Elementary and Secondary Education.

When it was announced that the State Job Service offices would begin accepting GM applications, more than 3,000 requests for applications were received in the first two hours at St. Charles, Mo., the office closest to Wentzville.

In a two-week period, the office received more than 80,000 applicants and that could have tied up the automobile plant for weeks.

Light trucks pace August to 10 percent gain

Continued from Page 14

inventory shortages, and to Toyota which was hardest hit by lack of product.

Year-to-date, import sales of 548,237 were still 24.5 percent ahead of 440,493 in the eight-month period a year ago.

Strapped by a lack of product, Toyota truck sales of 23,741 last month were off sharply from 37,322 in August, 1984.

For eight months, Toyota retailed 223,737, up 23.3 percent from 181,528 a year earlier.

Nissan's sales of 22,932 last month were up sharply from 15,912 a year ago.

For eight months, Nissan retailed 183,165, up from 140,914 last year.

Mazda's sales of 9,929 were up from 9,316 on a monthly basis. Its eight-month sales still trail last year, 74,040 compared with 80,636 a year ago.

Isuzu sales of 6,546 for the month were up from 4,517 a year earlier. Its eight-month sales of 50,671 were up from 27,397 a year earlier.

Mitsubishi sales of 1,239 in August were slightly below 1,258 a year earlier. Its eight-month sales of 16,624 were up from 10,018 last year.

Stiff penalties in odometer case

PROVIDENCE.—Emilio DiSanto, 47 an East Greenwich (R.I.) used-car dealer, was fined $260,000 and sentenced to four years in prison by Judge Francis J. Boyle in U.S. District Court for odometer tampering.

DiSanto was indicated last Sept. on 38 counts. In November, he pleaded guilty to seven counts.

Cyril L. Kennedy, 58, a former DiSanto employe, who had pleaded guilty to six of 19 counts, was fined $25,000 and sentenced to an 18-month prison term.

Leasing firm merges with Anglo American

NEW YORK.—Anglo American Auto Auctions, Inc., has merged with Sandgate Corp.

In payment for Anglo American, Sandgate issued 1.2 million shares of Sandgate common stock to the British Car Auction Group, former owner of Anglo American.

BCA already owned 390,000 shares of Sandgate common stock. With the 1.2 million shares it acquired in the merger, BCA now owns about 73 percent of the Sandgate common stock now outstanding.

Anglo American operates 11 vehicle auction centers, which it has acquired since its formation in April, 1982. Anglo's auction centers are in Nashville, Kansas City, Omaha, Dallas, Minneapolis, Detroit, Chicago, San Francisco, West Palm Beach, Fort Lauderdale and Baltimore.

The British Car Auction Group is the leading vehicle auction company in the U.K. Through subsidiaries, BCA operates 14 vehicle auction centers in the U.K.

Sandgate, through its wholly owned subsidiary, All-State Vehicles, Inc., operates a vehicle leasing business in offices throughout the U.S.

Arkansas dealers elect Aycock

LITTLE ROCK.—The Arkansas Automobile Dealers Assn. has elected Hervey Aycock, Aycock Pontiac, Jonesboro, as its new president.

Other new officers are Jerry Scriber, Jefferson Motors, Pine Bluff, first vice president, and Gerald Jones, Jones Oldsmobile-GMC, Fayetteville, treasurer.

The group installed its new officers during its 51st annual convention held at the Excelsior Hotel here.

N-car moonroof from Sky-Top

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the Pontiac Grand Am, Oldsmobile Calais and Buick Somerset Regal. Features include a stainless-steel glass frame, matching trim ring or optional charcoal trim, a privacy sunshade and automatic wind deflector.

Wisconsin waiver extended on FTC's used-car rule

By Jake Kelderman
Washington Reporter

WASHINGTON.—The FTC has decided to take another 90 days to consider Wisconsin's request that it be given the right to enforce its own used-car rule instead of the FTC's.

The Wisconsin used-car rule is more stringent than the FTC's. The FTC regulation requires only that the used-car dealer reveal, by way of a window sticker, the nature of the sale, what warranties are available and a recommendation that all terms be put in writing.

The Wisconsin rule has been in force for a number of years and previously had been cited by the FTC as a model of the type of rule it had in mind when it first proposed its own used-car rule under the Carter Administration.

Shortly before the FTC's rule went into effect on May 9, Wisconsin Attorney General Bronson LaFollette asked the FTC to exempt the state from it on the grounds that it offered Wisconsin used-car buyers less protection. The FTC subsequently stayed enforcement of its rule in Wisconsin while it considered LaFollete's petition.

That stay was to have ended Sept. 6, but with the 90-day extension, it will remain in effect until Dec. 5.

In extending the deadline, the FTC said it was unlikely that Wisconsin consumers would suffer "significant injury" if the state's petition were denied.

Commissioner Patricia Bailey voted against extending the stay. Bailey is the last of the pre-Reagan FTC commissioners and was the champion of the original used-car rule that would have required used-car dealers to notify buyers of "known defects" in the vehicle.

She said the Wisconsin rule "provides greater protection to consumers than does the weakened FTC rule, and the commission could and should act now to exempt the state from coverage of the federal rule."

Trial is delayed for Detroiters in conspiracy case

Continued from Page 2

peared in the Detroit Free Press last October.

An unnamed but "high-ranking agency official" was quoted as saying, "We have overwhelming evidence of a conspiracy on hours of operation . . ."

Respondents' lawyers want to know more of the role of the FTC itself, its Bureau of Competition and any lawyers or persons who might have "prejudged" the issue or who may have been guilty of misconduct by talking to the press about a nonpublic investigation.

The attorneys have raised questions about criminal violation of the FTC Act, breaches of ethics and/or FTC policy guidance. They have asked Judge Timony to subpena the FTC.

The FTC staff has explained that the FTC is not a single entity and cannot simply be supenaed; there would have to be ex parte communications among the five commissioners, the law judge and other FTC officials.

Besides, the FTC staff said, law judges do not have jurisdiction to disqualify commissioners, but even if they did, there are no grounds for such action. The FTC staff said the newspaper article merely cited "opinion" and referred to the adequacy of the investigation and the possible basis for a complaint not yet brought.

However, said the staff, if Judge Timony thinks there is need for further investigation, he can refer the matter to the Justice Department, which has enforcement jurisdiction over criminal matters.

RUSHVILLE, Ill.—Forrest B. Cain, Rushville Motors, Inc., has received a 25-year-dealer award from Ford Division.

Will Hyundai consider U.S. as plant site?

Continued from Page 3

firm that was hired to seek a suitable location.

Several provinces are said to be in competition for the plant, which will employ about 1,200 persons by the end of the decade. Canadian sources say the facility is likely to be situated in the Montreal area.

The new plant is scheduled to be in operation by 1988 and to be running at peak capacity two years later. Hyundai has said the entire output of the Canadian plant will be sold in Canada.

"I don't think Hyundai would gain any credibility by building cars in Canada and selling them here," said Matthias. "There is no upside there. That is not part of the plan."

Hyundai sold approximately 25,000 rear-drive Pony subcompacts in Canada in 1984 and has sold more than 40,000 Pony and Stellar cars so far this year, making it the country's No. 1 auto importer.

Would die if used in federal two-thirds formula

California belt bill has a loophole

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—California's on-again, off-again, seat-belt bill is on again, the result of a compromise that would repeal the law if the Federal Government scraps passive-restraint regulations.

It is also the first state belt-use measure to require auto manufacturers to equip their vehicles with passive belts or air bags by 1989.

House and Sentate conferees, having worked out the compromise, sent the bill to Gov. George Deukmejian, who has voiced support for a mandatory belt-use law.

The legislation was all but dead a week ago when its author, House Speaker Willie Brown, San Francisco Democrat, wanted to scuttle his own bill because he had not received assurances from Transportation Secretary Elizabeth Dole that the bill would not used be by her agency to help rescind passive-restraint regulations.

Passive restraints are to be phased into new cars sold in the U.S, beginning with the 1987 models. Those rules will be rescinded if states with two-thirds of the nation's population adopt mandatory seat-belt-use laws meeting federal standards by April 1, 1989.

Although the California bill contains provisions that do not meet the letter of the federal guidelines for mandatory seat-belt-use legislation, the lack of assurances by Dole that the California bill would not be used toward the two-thirds requirement was enough for Brown to stop the bill.

Brown's original bill had an amendment similar to the one agreed to by the conferees that would repeal the law if DOT used it to scrap passive restraints.

That amendment was considered unacceptable by the Senate, and it was dropped at the urging of the upper-house sponsor, John Foran, San Francisco Democrat. Foran opposed the amendment on the grounds that the mandatory seat-belt-use law should be permanent no matter what the Federal Government does.

When it appeared that the legislature would adjourn for the year on Friday (Sept. 13) with no seat-belt legislation, the Senate apparently relented and the amendment was reinserted. If signed by the governor, the law would take effect Jan. 1, 1986.

The auto industry is going along with bill as the best mandatory legislation attainable.

As written, manufacturers that fail to install passive belts or air bags beginning Jan. 1, 1989, will be fined $500 per non-complying vehicle.

Motorists are subject to a $20 fine for the first offense and $50 for each additional offense for not wearing belts.

Incentives reduce stock of new cars to 9-month low

Continued from Page 1

supply rose by 15 days, but that was good news for the company because it has consistently run short of the domestic industry's ideal range (35 to 65 days' supply).

This month's unit count was divided this way by maker: GM, 56.45 percent; Ford, 23.05 percent; Chrysler, 15.81 percent; AMC, 2.92 percent; VW (domestic only), 1.17 percent; Nissan, 0.38 percent, and Honda, 0.22 percent.

On Aug. 1, the breakdown was: GM, 56.49 percent; Ford, 21.14 percent; Chrysler, 18.32 percent; American Motors, 2.54 percent; VW, 1.05 percent; Honda, 0.24 percent, and Nissan, 0.22 percent.

By market class, the latest stockpile was divided this way: Subcompact, 18.70 percent; compact, 20.08 percent; intermediate, 34.69 percent; standard, 12.59 percent, and luxury, 13.94 percent.

On Aug. 1, it was shared this way: Subcompact, 18.24 percent; compact, 21.30 percent; intermediate, 33.92 percent; standard, 13.04 percent, and luxury, 13.50 percent.

The Sept. 1 domestic cars by market class and days' supplies:

Subcompact—Nova, 119; Alliance, 102; Encore, 88; Golf, 68; Horizon, 64; Omni, 64; Laser, 60; Charger, 53; Turismo, 53; Chevette, 52; Pontiac 1000, 51; Daytona, 47; Fiero, 47; Lynx, 41; Escort, 40; domestic Nissan Sentra, 40; EXP, 38, and domestic Honda Accord, 8.

Compact—Firenza, 110; Eagle, 103; Skyhawk, 74; LeBaron, 68; Capri, 64; Aries, 55; Cimarron, 53; Reliant, 50; Topaz, 47; Mustang, 46; Sunbird, 41; Tempo, 40; Cavalier, 40; Camaro, 36, and Firebird, 28.

Intermediate—Caravelle, 100; Monte Carlo, 98; New Yorker E and E-Class, 94; Dodge 600, 83; Somerset Regal, 77; Marquis, 69; Lancer, 67; Bonneville, 63; Grand Prix, 59; Citation, 59; Regal, 58; LTD, 56; Skylark, 53; Thunderbird, 51; LeBaron GTS, 50; Calais, 48; Grand Am, 44; Cougar, 42; Celebrity, 40; Pontiac 6000, 39; Century, 39; Cutlass Supreme, 36, and Cutlass Ciera, 34.

Standard—Diplomat, 80; Olds 88, 71; Gran Fury, 70; Chevrolet, 61; Crown Victoria, 61; LeSabre, 51; Grand Marquis, 47, and Parisienne, 46.

Luxury—Seville, 130; Corvette, 122; Eldorado, 117; Toronado, 103; Riviera, 98; Electra, 63; Mark VII, 61; Continental, 60; Fifth Avenue, 57; Cadillac, 53; Lincoln, 49, and Olds Ninety-Eight, 39.

Sprint tops MPG listing

Continued from Page 1

the Jaguar XJ-S at 13/17 MPG; the Mercedes-Benz 560 SL at 14/17 MPG; the Mercedes-Benz 560 SEC and SEL at 14/16 MPG; the Mercedes-Benz 420 SEL at 15/18 MPG; the Jaguar XJ6 at 15/19 MPG, and the Chevrolet Caprice and Pontiac Parisienne wagons at 15/22 MPG.

In dollars and cents, the difference in fuel costs over a year for the highest and lowest fuel-economy vehicles amounts to $1,710, EPA said.

EPA said the Sprint ER would use $328 worth of gasoline in 15,000 miles of driving, while the Rolls-Royce Camargue would consume $2,038 worth.

The agency said also that the Jaguar XJ-S and XJ6, the Mercedes-Benz 560 SL, SEC and SEL and the Mercedes 420 SEL would be subject to "gas-guzzler" taxes for failing to meet minimum fuel-economy standards set by the Federal Government.

As a low-volume manufacturer, Rolls-Royce/Bentley has other fuel-economy standards and is not subject to the regular gas-guzzler tax.

Government unlikely to let Japanese firm take over

GM, Isuzu snagged in Philippines

MANILA, Philippines.—The plan for Isuzu Motors, Ltd., to assume General Motors' equity in its joint-venture assembly operation here has received a setback from the Philippine Government.

Roberto V. Ongpin, trade and industry minister, was quoted as saying Isuzu is not likely to take over the General Motors Philipinas, Inc. (GMP), license in his country's Progressive Car Manufacturing Program (PCMP).

Ongpin, according to the Manila Times, said no member of the PCMP may transfer its license without the approval of the Board of Investments.

Isuzu was negotiating to get the PCMP license of GMP by buying GM's 60-percent stake in the assembly operation. Isuzu already owns 40 percent of GMP, which was formed in 1979 between GM Overseas Distribution Corp. and the Japanese auto maker.

GM idled the two GMP plants in Almanze and Paco, suburbs of Manila, because it lacked knockdown kits and suspended operations completely when workers went on strike after negotiations over severance pay collapsed.

GM was looking for a way to withdraw from the venture by having Isuzu either take over GM's equity entirely or else reverse the 60-40 percent role.

In the first six months of this year, GMP's light utility vans dominated the Philippine market that had declined 60 percent from the year-earlier period due to an economic slowdown. GMP sold 241 units in the six months.

GMP was the third of the original five PCMP companies to fold in the last year. Ford Motor Co. was the first, followed by Delta Motors, a Philippines firm assembling Toyota knockdown kits.

The suspension of GMP operation leaves only two automotive assembly operations in the country—Philipinas Nissan, Inc., assembling Nissan cars, and Canlubang Automotive Resources Co., in which former minority partners Mitsubishi Motors Corp. and Nissho Iwai Corp., a Japanese trading company, took over full control earlier this year. Chrysler Corp. had been involved in the early stages of the company.

Industry sources speculate that the Philippines Government may veto any rearrangement of equity in GMP in order to further reduce the number of original auto companies to the two that are still operating.

Year's car output now 5.8 million; 4 pct. over 1984

Estimated auto production of 161,076 last week was up 33.15 percent from 120,973 the previous week, which included Labor Day.

Last week's output was 5.00 percent higher than the year-ago week's 153,406.

So far this year, 5,858,064 cars have been assembled, 4.15 percent more than the 5,624,718 built last year at this point.

Last week's estimated auto output broke out as follows: General Motors, 58.94 percent; Ford Motor Co., 18.03 percent; Chrysler Corp. 16.27 percent; American Motors Corp., 1.71 percent; Honda of America Mfg. Co., 1.56 percent; Volkswagen of America, 1.46 percent; New United Motor Mfg., Inc., 1.24 percent and Nissan Motor Mfg. Co., U.S.A., 0.79 percent.

GM plants in Pontiac (G-cars), Lansing (Nos. 1 and 2) and Wentzville, Mo., worked two overtime shifts Saturday (Sept. 14).

Chrysler's St. Louis assembly plant No.2 is scheduled to work two nine-hour daily shifts this week (Sept. 16).

Ford has scheduled daily overtime this week at its plants in Chicago, Dearborn and Wayne, Mich. Saturday (Sept. 21) overtime is scheduled at the Chicago and Dearborn plants.

Glusac on hospital board

DETROIT.—Michael M. Glusac, Chrysler Corp. director of government affairs, has been appointed to the board of trustees of St. John Hospital here.

Truck production climbs for week; 75,849 assembled

Domestic manufacturers estimated production of 75,849 trucks last week, 23.72 percent above the previous week's 61,305 and 13.92 percent more than the year-ago week's 66,582.

So far this year, 2,441,432 units have been assembled, 10.19 percent more than the 2,215,605 completed last year at this time.

General Motors' Moraine (O.) plant worked two overtime shifts Saturday (Sept. 14).

Chrysler Corp.'s Warren (Mich.) plant is scheduled to work two nine-hour daily shifts this week.

A strike began last Monday at Ford's truck plant in Lorain, O. The walkout involved health and safety grievances and had not been settled at presstime.

Ford's light-duty-truck plants in Kansas City; Louisville; Wayne, Mich., and Norfolk, Va., are scheduled for daily overtime this week.

Canadian output moves upward after holiday

Scheduled output of 24,174 cars in Canada last week was 20.29 percent more than the previous (holiday) week's 20,096 and 51.13 percent better than the year-ago week's 15,995.

So far this year, 745,051 cars have been assembled, down 1.71 from last year's 758,000 at this time.

Truck makers pegged production at 18,420 units last week, 24.59 percent more than the previous week's 14,784, and 4.57 percent better than the year-ago week's 17,615.

Year-to-date, 603,820 trucks have been assembled, 5.85 percent more than the 570,434 built last year at this point.

International Harvester's truck plant in Chatham, Ont., was closed last week for inventory adjustment.

NUMMI to add a second shift

TOYOTA CITY, Japan.—New United Motor Mfg., Inc., Fremont, Calif., will add a second shift by increasing its workforce from the current 1,600 to 2,500 by the end of this year, according to Shoichiro Toyoda, president of Toyota Motor Corp.

Toyoda said the workforce is being expanded because NUMMI, a joint venture between Toyota and General Motors, is scheduled to increase the production of the Chevrolet Nova to an annual rate of 200,000 units next year.

NUMMI also is to start producing cars to be sold through Toyota's dealer network in autumn of 1986. The output for Toyota will be 15,000 units in 1986 and 50,000 in 1987.

$200 million U.S. job is awarded to EDS

DALLAS.—The U.S. Department of Agriculture has awarded Electronic Data Systems a $200-million contract for an office automation system designed to meet the department's present and future requirements. EDS is a subsidiary of General Motors.

During the 10-year agreement, EDS will provide systems integration for the office automation requirements of the Soil Conservation Service and the Farmers Home Administration.

Chrysler for '86

Hot performer for Dodge

A hot one from Dodge, the Daytona is offered as a base model and as the Daytona Turbo Z. Front and rear ends have been modified slightly for the new model year. Tinted glass and 14-inch aluminum wheels have been made standard. Also standard on both models is an AM/FM/stereo radio with six speakers in the doors, rear body panels and instrument panel. Story, other pictures are on Page 40.

Fifth Avenue stresses luxury

Luxury, classic styling, traditional rear-wheel drive and eight-cylinders under the hood. That's what the buyers of Chrysler Fifth Avenue are seeking. With room for six, the car is Chrysler's largest sedan and its sales have been increasing regularly in recent years. Changes are minimal for 1986. Story, other pictures are on Page 30.

From Plymouth for 1986

The folks at Plymouth say their Caravelle counts size among its major attractions. The spacious front-drive job provides seating for six passengers, a good-sized trunk and a comfortable ride. Story, other pictures are on Page 22.

Turmoil in South Africa imperils U.S. car output

By Dan McCosh
Detroit Reporter

How long could auto companies keep producing cars should the racial and political turmoil in South Africa cut off supplies of strategic metals?

The question is increasingly on the minds of auto executives in Tokyo, the U.S. and Western Europe as strikes and riots protesting South Africa's apartheid policies escalate.

The answer, it seems, is not long.

The near-total dependence of auto makers in the U.S., Australia, Japan and some countries in Western Europe on a steady supply of scarce rhodium, a precious metal used in automotive catalysts, leaves the auto industry in a precarious position if South African mines are shut down, according to auto purchasing executives and metal industry specialists.

That's because virtually all the rhodium used by auto makers today comes from South Africa.

Rhodium is a critical component of the so-called "three-way" catalysts installed on almost all passenger cars in countries that enforce stringent emission standards.

Although each car catalyst contains only about one one-hundredth of an ounce of the material, auto industry demand annually consumes about half of the rhodium produced worldwide, with the remainder critical to oil-refining, glassmaking and certain electronic components.

Rhodium became significant to the auto industry in 1981, when tightened U.S. emission standards reduced the acceptable levels of NOx—a pollutant sometimes blamed for the creation of Los Angeles smog. Previously, catalysts using platinum and palladium—likewise scarce, but more readily available than rhodium—could meet the standards.

Today's catalysts use several mixtures of platinum, palladium and rhodium and contain about twice the amount of precious metal that was used in the mid-1970s.

A geologic quirk has placed virtually all of the free world's supply of rhodium-bearing ore in a rock formation called the Merensky Reef—a bowl-shaped deposit roughly the area of Manhattan Island located in Bophuthatswana, a black township in northeastern South Africa.

• The only other major outcropping is in the Soviet Union, which is not considered a reliable source by auto makers. The Merensky Reef is located on the tribal homelands of the Bafokeng tribe, which leases the mineral rights on a long-term basis to white-owned South African mining interests.

So far, the labor unrest that has shut down other other South African mining operations has not reached the Rustenberg or Impala mines in Bophuthatswana.

Some observers feel that the relatively high pay in the platinum and rhodium mining industry has been a factor in keeping the peace, although the deep, hard-rock mining in shafts only 36 inches high and 3,000 feet below ground ranks with the most difficult in the world.

The predominantly male workforce in the Merensky Reef mines is mainly recruited for short stints from outlying areas, with 20,000 to 30,000 workers living in huge work camps supervised by the mining companies—a black population subject to South Africa's apartheid system of racial segregation.

"There have been no interruptions, so far it hasn't been a problem," said Gordon Bassett, pre-

Import stocks padded by Japanese makes

By Kathleen Hamilton
Assistant Managing Editor

Domestic incentives apparently kept buyers away from captive imports in the same showrooms, pushing inventories of Japanese cars to a seven-month high. The combination of slower import-truck sales and a surge in shipments after the end of the haulers' strike pumped the import-truck stockpile to a seven-month high, too.

September opened with 293,268 imported cars in the U.S., slightly more than on Aug. 1, when there were 291,871 and the Teamsters were in the middle of their strike against the transport companies. All in all, though, the import-car inventory has remained in a narrow range since June 1.

On Sept. 1, 1984, there were 184,513 import cars in stock.

The latest stockpile translates into a 31-day supply of new imported cars, up from Aug. 1's 29 days to the same level it was on July 1. On Sept. 1, 1984, there was only a 24-day supply of imported cars.

In contrast to the increase in the import-car supplies, the domestic car makers sliced their inventories last month to a nine-month low.

Even though the Japanese-car supply was the highest since Feb. 1, 25 days' worth of cars can hardly be considered overstocked. Importers generally aim for 50 to 75 days' worth of cars, although under quotas the Japanese have been operating at half or less of that "ideal" level.

The inventory of imported light trucks (including Nissan's Tennessee-built trucks) jumped to 99,748 on Sept. 1 from 74,720 on Aug. 1 and 75,352 on Sept. 1, 1984. The latest inventory number was the highest count since Feb. 1, when there were 101,619 import trucks in the U.S.

The Sept. 1 truck days-supply figure (40 days) was the highest in eight months; it reached 45 days on Jan. 1. The Aug. 1 figure was half of what it was at the start of this month. On Sept. 1, 1984, there was a 28-day supply of new imported light trucks.

Back to the car figures: Many of the giant leaps in days-supply figures were attributable to inventories that soared during the month. Examples: Sprint, both

Rundell talks of fresh marketing approach

Saturn eyes new franchise ideas

By John A. Russell
New York Staff Writer

NEW YORK—The present franchise system could be in for a major change when Saturn goes on stream. The General Motors unit is studying new ways of marketing its cars.

C. Reid Rundell, executive vice president of Saturn Corp., made it clear last week that Saturn is taking a new approach. He said that while present GM dealers will get the first crack at the franchise, Saturn will have fewer dealers than many current domestic makes.

Speaking at the International Motor Press Assn. meeting here, Rundell said the company may "depart from the traditional" methods and is studying other franchise operations, including those in the fast-food industry, for concepts.

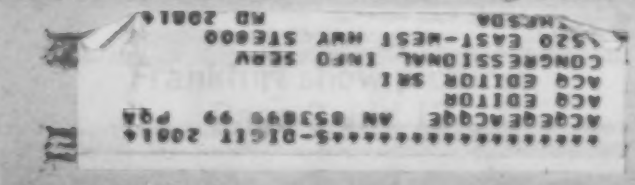
He drew particular attention to the McDonald's operation in which the company owns the land.

After the meeting, he said the sales and service agreement "could be different" and that another possibility is creating marketing subsidiaries as well as other methods to sell the cars.

He would not go into detail, but he said Saturn Corp. is studying all avenues and there are "no sacred cows" in its approach.

The retail system has drawn the particular attention of the executives at Saturn. They are concered about the buying experience of the consumer, and Rundell said that Saturn is a laboratory for the industry and the company will try many different things. He would not elaborate.

But while he would not go into detail on the franchise situation, it was clear that Saturn is looking at every facet and there "could well be changes."



breaking news

Ford prices up 2.9 pct. for 1986

DEARBORN.—Ford Motor Co. made a price statement last week but, like General Motors, it refused to put a dollar amount on the average increase for its 1986 models. Ford said only that prices will rise 2.9 percent on a comparably equipped basis. GM's hike is 3 percent, which is estimated at $400. Ford said the Ford Tempo GL two-door is up $138; the Ford Escort L four-door is up $176; the Mercury Grand Marquis four-door is up $590, and the Lincoln Town Car four-door is up $994. Dealer discounts and destination charges are unchanged. Option prices are generally unchanged, but optional V-6 and V-8 engines and transmissions are up.

NEWSPAPER

He sees threat to jobs

Dingell joins backers of an easier CAFE

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The acrimonious CAFE quarrel in the domestic auto industry has pushed Rep. John Dingell, Michigan Democrat and the auto makers' favorite congressman, into clearly siding with General Motors and Ford Motor Co.

The reason: He will never be a party to the loss of jobs in the U.S. or sending jobs overseas.

GM and Ford asking for a rollback of 1986 and later CAFE standards, and Chrysler Corp. insists vehemently that they should stay at 27.5 MPG. The first step is a reduction of the 1986 standard to 26 MPG.

At last week's hearing before the House Subcommittee on Energy Conservation and Power, Dingell told Chrysler, in effect, "I helped Chrysler get federal loan guarantees when you needed me, and now with threats of job loss, I am on their side."

But he sternly lectured the company spokespersons—GM Vice President Marina vN. Whitman, Ford Vice President Helen O. Petrauskas and Chrysler President Harold K. Sperlich—to stop the unseemly backbiting.

Dingell, as chief author of the 1975 CAFE law, also wrote the section to give NHTSA rollback flexibility in meeting the 1985 standard of 27.5 MPG, and he crafted the three-year carryforward and carryback credit provision so much needed by Ford and GM, but mostly by GM. Dingell said he opposes all current attempts to change the 1975 law.

One by Rep. Barbara Boxer, California Democrat, to set higher standards; one by Rep. Pete Stark, California Democrat, to take away NHTSA's authority to lower standards, and a House Resolution by Rep. Edward J. Markey, Massachusetts Democrat (who as Subcommittee chairman presided at the hearing) and 25 other lawmakers to urge NHTSA's Administrator to retain the current CAFE standards.

But while Dingell, as chairman of the full House Energy and Commerce Committee, welcomed Markey's assurances that the hearing would not impinge on NHTSA's pending decision for 1986 models, he nonetheless wanted to make clear his own views on the payment of civil penalties and decisions by GM and Ford that they cannot "plan" to break the law.

That became especially clear after Sperlich noted that Chrysler will continue to make the Chrysler Fifth Avenue (or Dodge Diplomat, or Plymouth Gran Fury) with a 318-CID V-8 engine and willingly pay a $500 fine by missing the "gas guzzler" cutoff by one MPG.

So, asked Sperlich, why did GM and Ford not pay their penalties for missing CAFE standards and make lots of money rather than close plants and put people out of work?

Dingell chided Chrysler for its newest position, after noting that its 1980 testimony regarding light-truck fuel economy was almost identical with that of Ford and GM. Dingell said he would be "outraged" if any firm made a deliberate decision to break the law and so would many stockholders.

All three companies will be filing legal memos on the question of choosing to pay fines instead of closing plants and causing layoffs by limiting production of big cars. But before the hearings, Markey had already asked the Congressional Research Service for its views.

CRS made it clear that nothing in the law says production must be stopped if standards are not met, but neither does the law forbid a car maker from deciding to stop or cut back production.

While some have speculated that Ford and GM will not pay fines because of fear of shareholder derivative suits, neither company will confirm that.

In a separate memo addressing the outlook for shareholder derivative suits against car makers, CRS said it cannot say definitely whether directors would be found negligent by failing to pay a fine instead of complying, although paying the fine would be cheaper

Dealers view new Fords in Hawaii

More than 3,500 Ford dealers attended Ford Division's Sign of the Times introductory meetings in Hawaii, where the 1986 line —including the new Taurus, above—was displayed. Presenting Taurus was Robert L. Rewey, Ford Division general manager.

Bills on methanol fuel would aid gas gulpers

By Helen Kahn
and Jake Kelderman
Automotive News Staff

WASHINGTON.—Ford Motor Co. is talking about building parts for its big cars in Mexico to get out from under federal fuel-economy requirements but such extreme measures may not be necessary if Congress passes legislation this year aimed at creating a market for methanol fuels.

Under bills introduced by Senator John Danforth, Missouri Republican, and Rep. Phil Sharp, Indiana Democrat, the company could instead fit the cars with equipment that would allow them to run on methanol/gasoline blends of at least 85/15 and thereby turn their giants from fuel-gulping road monsters to fuel-sipping highway cruisers; from cars averaging about 20 MPG to cars averaging a whopping 160 MPG.

Both Danforth and Sharp would measure the fuel economy of cars equipped to run on methanol blends only on the amount of petroleum they use. Thus, a car averaging 15 MPG on a 85/15 blend of methanol/gasoline, would have a fuel-economy average of 100 MPG for government purposes (15 MPG divided by 0.15).

Spokespersons for Danforth and Sharp acknowledge that this largesse could be construed as a "loophole" in the federal fuel-economy laws, but they insist that incentives must be given if a market is to develop for methanol—methanol that can be produced from cheap U.S. coal.

The Danforth measure is scheduled to reach the Senate floor as early as this week. The Sharp bill, on the other hand, has just been introduced. Both measures have bipartisan support, however, and the White House has gone so far as to muzzle the EPA from speaking out against the bills.

The agency is said to have objected strenuously to the Danforth measure on the grounds that it was an excessive "giveaway," granting much greater fuel-economy credit than it should, since methanol contains only about half the energy that gasoline does.

But the White House recognized a solution to the problem of what to do about U.S. auto makers facing fines for failing to meet CAFE standards. so it told the agency to "lay off." Indeed, the EPA has been told to say absolutely nothing about the measure, agency sources indicated.

Among the alternatives offered by EPA was a plan to add the multi-fuel capability to only about 20 engine families certified on high-octane unleaded fuel.

That would have amounted to about 350,000 vehicles each year, a number EPA deemed sufficent to get methanol fuels to the market without unduly "giving away the store" on CAFE compliance, an Administration source said.

Automotive engineers estimate it would cost less than $100 to equip a car to run on methanol/gasoline blends as high as 85/15.

Ford has already demonstrated the feasibility of multi-fuel capability and has publicly thrown its support behind the Danforth measure. Ford says it will be 1990 before it can get into production with such equipment, however.

Sharp's measure seeks to ad-

DeLorean indicted by U.S. grand jury

By Edward Lapham
Marketing Editor

A federal grand jury in Detroit returned a 15-count indictment against former auto maker John Z. DeLorean last Friday.

As expected, the 99-page indictment charged him with RICO (Racketeering Influenced and Corrupt Organization) and other federal crimes involving mail fraud, wire fraud, interstate transportation of stolen money, income tax evasion and causing false income tax returns to be filed.

If convicted on all counts, DeLorean could receive a sentence of up to 77 years in prison.

No other individuals were indicted last Friday.

Virtually all of the indictment counts stem from a series of financial transactions involving $17.65 million which disappeared from the defunct DeLorean Motor Co.

The indictments were the result of a federal probe which commenced in 1982. The federal grand jury began hearing evidence in the case more than two years ago.

The U.S. attorney said no arrest warrant was requested. Arraignment is tentatively scheduled for Sept. 27.

Allegations about DMC financial improprieties have run rampant since before the company petitioned for Chapter 11 bankruptcy status in October, 1982, just a week after John DeLorean was arrested on federal drug-trafficking charges in Los Angeles. He was later acquitted of those charges.

During the bankruptcy proceedings in Detroit, first the unsecured creditors committee and later the trustee of the DMC estate charged that John DeLorean diverted at least $8.5 million of the missing $17.65 million for his own use.

Specifically, they charged that DeLorean used it to pay off a loan to acquire a company in Logan, Utah, which produces snow-grooming equipment for ski slopes and other tracked vehicles.

At various times, three federal judges have ruled there is sufficient evidence to suggest the creditors are likely to prevail.

In September, 1978, when DeLorean was closing his deal with the British Government to take his sports-car project to Northern Ireland, investment banker Oppen-

Potamkin acquires N.Y. Chrysler deal

NEW YORK.—Victor Potamkin, a leading Cadillac dealer here, has acquired Chrysler Corp.'s company-owned dealership in Manhattan.

Chrysler had operated the retail outlet for nearly 30 years and it sold about 5,000 cars last year. Potamkin has a reputation for turning around money-losing dealerships. He operates 28 dealerships, including five other Chrysler outlets.

Croats wage war of words against Yugo

By Kathleen Hamilton
Assistant Managing Editor

An association of Croats is waging a letter-writing campaign against the Yugoslavian-built Yugo and says it will begin placing advertising to get its message across.

Matthew Mestrovic, president of the executive committee of the Croatian National Congress, said he has sent letters critical of the Yugo to editors of "50 to 100" newspapers and automotive magazines. Yugo entered the U.S. market last month.

The letter sent to Automotive News was critical, among other things, of the product, of the wages paid to Yugoslavian auto workers and of the fact that its exports help the Yugoslavian economy.

Mestrovic characterized the Croatian National Congress as a 5,000-member international political group whose goals include cultural education and advocacy of a separate Croation nation, free of Yugoslavian control.

A Yugo of America, Inc., executive said the company was not aware of any organized opposition to its cars. "But I am not surprised. There are always dissident groups," said Jonas Halperin, Yugo senior vice president. He recalled Jewish opposition to the first German imports, and the opposition to Japanese imports in the aftermath of World War II.

He cited passages from a U.S. State Department document encouraging U.S. trade with Yugoslavia to lessen its dependence upon the USSR. Yugoslavia has used its dollars from U.S. exports to buy U.S. goods, he said.

Yugo has said repeatedly its U.S.-bound cars differ significantly from those produced previously.

Toyota planning to exhibit at NADA convention

WASHINGTON.—Toyota Motor Sales U.S.A. will have an exhibit at the 1986 NADA convention, which will be held Feb. 1-4 in New Orleans.

Toyota last exhibited at NADA in 1972.

Bob McCurry, senior vice president of Toyota Motor Sales, said the NADA convention provides "an excellent opportunity to hear from our dealers and to show them the latest of what Toyota has to offer."

Convention Chairman Frank England Jr. said, "Toyota will occupy a 3,200-square-foot space and will be located in a visible positon comparable to those of General Motors, Ford, Chrysler and AMC."

"We're delighted to have America's largest import manufacturer participating in such a prominent capacity," England said. England said the company's presence as an exhibitor represents a valuable forum for senior management to communicate with their dealers.

The 1986 NADA Convention and Exhibition will occupy more than 144,000 square feet in the new New Orleans Convention Center. It is described as a "state of the art" facility and was the principal building for the recent World's Fair.

60th year—No. 5093

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 1400 Woodbridge, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

1986: The year of the

By Michelle Krebs
Financial Editor

Auto analysts unanimously agree 1986 will be the year of sales incentives. It also will be another year of Japanese imports chomping large bites out of the domestic makers' market share.

Beyond that basic consensus, however, there was widespread disagreement about 1986 motor vehicle sales. In fact, the auto analysts surveyed by Automotive News forecast a wider spectrum than any time in recent years.

Forecasts for total motor vehicle sales range from a high of sixteen million units to a low of 14.2 million.

Forecasts for car sales run from a low of ten million units to a high of 11.4 million. Of the total car sales, estimates for import share range from 3.2 million to 2.9 million units, which would put the domestic auto makers at recession levels.

Predictions for total truck sales range from a low of 4.1 million units to a high of 4.8 million units. Estimates of the import share of truck sales range from 600,000 units to 830,000 units.

The Automotive News composite puts total motor vehicle sales at fifteen million units for the 1986 calender year with 10.6 million car sales and 4.4 million trucks sales. Of the total car sales, three million units will be imports and 699,000 of the truck sales will be import trucks, according to the composite.

One year ago, many of the analysts anticipated a recession by 1986. Now, they generally have become more optimistic about next year. The Automotive News composite for 1986, when analysts were surveyed a year ago, was only 14.3 million units. Part of the boost comes from increased truck sales projections, which include the popular minivans.

Incentives

On one point the analysts are in agreement: 1986 will be a year of incentives.

"Sales incentives will be off and on for the next 12 months—maybe the next 24 months," said Jean-Claude Gruet, of Salomon Brothers Incorporated.

Maryann Keller, of Vilas-Fischer Associates, said the consumer has been conditioned to expect incentives since they were offered in the early 1980s recession.

"It was difficult to wean the public from them," she said. "It took a strong economy to make the public realize there were no more good deals. Few cars are sold without incentives because the consumer sits back and waits for the next round."

Import Share

The analysts also unanimously agree imports will continue to take large bites out of the domestics' market share, although to what degree is a subject of great controversy.

Keller paints a grim picture for the domstic auto makers. Noting the import market share in July hit 29.5 percent, she said that level will be maintained into next year with the Korean imports added to the Japanese and European makes.

In addition, U.S.-produced Japanese cars will compound the downward pressure on the domestics. Domestics will have sales of under seven million units, a recession level total, she said.

"Detroit has been battling cost and quality while the Japanese have declared themselves a winner in that battle," she said. "They have moved on to a new battle—that of fighting for market share, specializing a product line, focusing toward a specific market niche. They are all over the place, offering an infinite variety of models."

She likens it to what cigarette makers are doing—seeking niches in a stagnant market. Virginia Slims, for example, has found a niche with women; Marlboro with the macho man segment.

Instead of taking huge chunks of market share with one product, the imports whittle away at market share in small bites, with many models.

Effectively, she said, a free market exists and neither the Reagan Administration nor Congress appear to believe there is a problem.

On the opposite end of the spectrum, Arthur Davis, of Prescott, Ball & Turben, insists the American public and government won't stand for the import share hitting 25 percent.

"Forget it," he said. "If that happens, that means domestic production will fall almost a million units. That would mean massive layoffs in Detroit.

"There's no way that will happen with our trade deficit with Japan heading toward $45 billion next year," he said. "Congress already is screaming about import control in terms of surcharges."

A number of analysts see import penetration rising to as much as forty percent of the U.S. market by 1988 but then holding steady.

"The Japanese are limited from the import side by production capacity and still want to supply the Third World, European and domestic markets, which are expected to grow," said Ted Sullivan, of Data Resource Incorporated (DRI).

"Toyota and Nissan will not be the culprits of large increase," he said. "The smaller manufacturers will. They have beefed up capacity but were held back by import restraints."

Nevertheless, he believes they will hold back as well, fearing a political reaction and the threat of local content legislation.

Gruet believes the domestic auto companies must offer incentives to keep market share. He places import penetration at 28.9 percent in 1986, 29.5 percent in 1987, 30.8 percent in 1988, 39.8 percent in 1989 and 31.5 percent in 1990.

However, if U.S. production by foreign manufacturers and joint ventures between U.S. and foreign companies are included, import share rises to 34.6 percent in 1986, 37.3 percent in 1987, 40.7 in 1988 and 1989 and 41.6 percent in 1990.

He calls his numbers conservative because he bases them on already-announced production programs.

Nevertheless, most analysts believe Congress and the Administration are not likely to take any trade policy action.

David Healy, of Drexel, Burnham & Lambert, said protectionism will resurge in full force only if the auto industry enters a recession. The imports will be blamed and the wheels of protectionism will be set in motion.

"As long as the industry is prosperous, it will stay quiet in Washington," he said.

Scott Merlis, of Shearson Lehman Brothers, said if high unemployment exists at election time, Detroit is likely to win protectionist support.

Small Cars

The analysts generally agree consumers shopping for small cars will find the best bargains.

"The small-car market will be competitive as hell," said Healy. "No one will make any money, and the small-car buyer will be in hog heaven."

The analysts agree a glut of small cars, including the new entries from Yugoslavia's Yugo and South Korea's Hyundai, will far exceed demand, forcing manufacturers to cut prices and offer incentives.

"It's a good bet the small-car segment will suffer price weakness," said Merlis. "The question will be whether or not price weakness will be confined to small cars."

Even imports may experience price pressures, some say. "Import dealers are taking off the premium," said John Maher, of Citicorp. "Pricing will become intensely competitive in the fourth quarter of this year and early in 1986. Wide-scale incentives will dig even further into already tight profit margins on small cars."

Despite the continued import dominance in small cars, some analysts insist domestic manufacturers must stay in the small-car business.

"GM, as the largest company in the world, however unpalatable, must find a way to remain competitive," Gruet said.

A DRI study shows small-car capacity by 1988 will exceed potential demand by 700,000 units, and that's if domestics operate at only eighty percent. It means some of the excess capacity will have to be shut down.

Yet DRI's Sullivan points out that small-car production remains important to U.S. producers as a means of experimenting with the manufacturing process and the whole way of doing business, just as GM's Saturn project is designed to do.

creative incentive

"Secondly," Sullivan added, "it's more important strategically for the domestics to maintain a presence in the small-car segment, even though they lose money on it, in order to capture the first-time buyer who later will move upscale."

Only Keller disagrees. "What's a small car? What are the Japanese building?"

Keller contends no tie exists between size and price, and the Japanese have moved their models up the size and price ladder, saying she recently saw a Toyota Corolla in a dealership room with a sticker price of $12,900.

She argues that if you asked a Detroit auto executive to draw a picture of a Japanese car, he'd probably draw a boxy, simple car —similar to the way a five-year old would draw a two-box house. And that simply is not the case any more, she said.

Minivans

The minivan segment remains a big question mark for 1986. Chrysler no longer is the single entry in the segment; General Motors and Ford have started selling their entries.

"You have to wonder if GM and Ford overreacted to Chrysler's success," DRI's Sullivan said. "No one knows how big the segment is going to be. It will have to make tremendous expansion in the market in order to fulfill capacity if it only runs at eighty percent.

"It could turn out that the segment of the market isn't that big, which means there will be incentives, aggressive advertising and price reductions," he added.

That could throw other segments out of equilibrium, he said. Potential buyers of large vans, small pick-ups, stations wagons, small utility truck may opt for minivans, where they can enjoy incentives, causing those segments to soften.

"Chrysler has been able to sell all the minivans it can make until now, showing the market is bigger than one plant," said Healy. "The question is how big is it. The sector will be fairly competitive . . . Chrysler may lose its monopoly."

Others believe Chrysler will continue to rule supreme.

Gruet estimates the minivan segment to be 500,000 to 550,000 units with Chrysler continuing to lead the pack but with GM gaining market share.

Ann Knight, of Paine Webber Incorporated, estimates the total potential of the market at one million units. "So there's room in the market for more than there are now.

"I'm skeptical that Ford and GM minivans appeal to the same group or appeal to as wide a range. GM is marketing its minivan more as a truck-like vehicle, but I don't have a strong sense of how Ford is marketing."

Though some overlap exists, Knight doesn't view GM and Ford as direct competitors to Chrysler's minivan.

Other Segments

There is little agreement concerning how other segments will fare in 1986.

Ronald Glantz, of Montgomery Securities, sees the intermediate and subcompact segments winning a boost from some attractive domestic models—GM's N-car sedans, the Pontiac Grand Am, the Buick Somerset Regal and the Oldsmobile Calais, and Ford's Taurus/Sable models. But those segments will gain at the expense of the full-size and luxury market.

Davis also sees success by the domestics with some attractive new models including GM's restyled larger cars, Chrysler's P-car and the Ford Taurus/Sable line. "All the electronics and performance will make it an exciting year," he said.

The direction of the sporty, performance car segment, which has enjoyed a comeback, depends on the individual analyst's economic scenario for 1986.

Those who paint a healthy picture for the economy with continued lower gas prices, see the segment doing well. Young, entry level buyers are apt to move up to the sporty, performance segment, they say.

However, those who view the 1986 economy as sluggish with declining disposable income, see a drop-off in sales of sporty, performance cars. Knight believes there may be a spillover into the lower end of the luxury European segment.

DRI's Sullivan expects the European imports to do even better than before since no production interruptions are on the horizon and with U.S. companies importing more models from their European affiliates.

Thomas O'Grady, of Integrated Automotive Resources Incorporated, perceives a vaccuum left by GM's elimination of the X car. He expects 100,000 car sales to be made up by Ford's Tempo/Topaz, Chrysler's Reliant/Aries and Toyota Camry lines.

General Economy

For the general economy, the analysts' are forecasting a range from "brilliant" to "lackluster." The diversity of opinion accounts, in part, for the diversity of opinion on motor vehicle sales.

Keller sees another year of a "sloppy economy . . . lackluster" with little difference in overall car sales from 1985.

Wendy Beale, of Smith Barney, Harris Upham & Company, doesn't believe the minimal growth in disposable income will be enough to sustain consumer spending, particularly of durable goods.

Merlis expects the consumers' high level of debt to lead to a cool-down in auto sales but not to a crash like we saw a few years ago. He further anticipates the potential of high unemployment and a continuation of the same trend into 1987.

Both Beale and Merlis forecast a sales year of 14.2 million units, the lowest of those surveyed by Automotive News.

The bulls read strong signals in the economy: Economic growth, low inflation, strong consumer confidence, higher disposable income.

Gary Glaser, of First Boston Corporation, was the most bullish of the analysts surveyed. He is forecasting an unprecedented sixteen-million unit year for motor vehicle sales, with the domestic makes benefitting from the boom year.

The economy is going to be strong, he believes, with perhaps as much as a four to five percent increase in the gross national product, which corresponds directly to car sales. Furthermore, he said, the economic cycle has yet to peak.

"We tried to determine what could pop up to knock sales off their strong path," said DRI's Sullivan. "We see nothing on the horizon.

Knight said she based her motor vehicle sales forecast purely on economics.

"We have a very, very optimistic outlook for the economy," she said. "The linchpin is low inflation. We get more optimistic about '86 as the economy gets more and more sluggish now. The cause of concern is inflation reigniting but there are no signs of that, and we really believe the Fed will be stimulative to the economy."

A DRI study concluded that car buyers will be more willing and able to buy cars in 1986 than now, based on the average monthly car payments, upon which interest rates play a major role, and per capita income. The study found that by the end of 1986, an average consumer will spend 25.5 percent of monthly income on a car payment instead of today's twenty-seven percent, because of income rises, price stabilization and lower interest rates.

"People are sitting with cash, people are employed and consumer sentiment indicates consumers are willing to buy cars," said Thomas Lent, of Prudential-Bache Securities. "They are apparently waiting for a better deal with the expectation that interest rates are coming down."

He suggests that consumers considering a major purchase would be better off buying a car than building or buying a house, for example, because of the attractive financing rates.

Some you win

Some you win, some you lose and some...well...some you try to forget as quickly as possible.

Last year at this time, our panel of analysts forecast a composite 1985 calendar year car and truck sales total of 14.8 million units, including a composite car-sales total of 10.8 million.

Right now, two-thirds of the way through the year, total car sales are 7.5 million. The APR financing programs will likely yield a boom September, but October launch sales could fizzle in the aftermath.

What's it all mean? If fourth quarter sales sputter and the factories come back with more incentives, or if the launch is moderately successful in and of its own momentum, last year's composite total of 10.8 million looks good. If not, well...

Several of the analysts in this year's panel also made projections last year. Here's how they did. Art Davis pegged car sales right at the 10.8 million mark. John Hammond said 10.6 million, as did David Healy.

Ann Knight, with an 11.2 million car-sales forecast, would need a farily strong launch to hit the mark.

Thomas O'Grady, with a 10.2 million-unit forecast one year ago, looks to be low. Unless, of course, the launch fizzles and the auto makers wait until after the first of the year to start feeding the car buyer the old, addictive incentive dope.

—Edward Lapham

Beyond 1986

Not all the analysts surveyed were willing to forecast beyond 1986.

The Automotive News composite puts total motor vehicle sales at 14.5 million units in 1987; 10.25 million cars and 4.24 million trucks. The composite shows import share edging up; 3.13 million units for cars and 703,000 import trucks.

The range was from 13.8 million units to 15.6 million. The low for car sales was 9.8 million with the high at 10.8 million. Import share of cars was predicted as high as 3.5 million units and as low as 2.8 million units.

Many of the analysts polled are anticipating a mild recession starting as early as late 1986 but certainly by 1987, which will reduce cars sales.

Domestics, they say, will bear the costs of the sales drop-off. Consumers have shown a preference for Japanese and European models, and greater availability of them is anticipated.

For 1988, the Automotive News composite showed motor vehicle sales rising to 15.22 million units; 10.76 million cars and 4.47 million trucks. Again, the import share rises—to 3.33 million cars and 761,000 trucks.

The analysts generally predicted 1988 would be better than 1987. The forecasts ranged from a high of 16.5 million units to a low of 13.85 million. The high for cars was 11.5 million while the low was 9.75 million.

Every forecast included the import numbers rising to more than three million units; as high as 3.8 million and as low as three million even. At the same time, import trucks, in the eyes of some analysts, are approaching the one million mark.

Overseas tourist delivery is here to stay

American vacationers flock to Europe's auto factory gates

By Richard Feast
European Editor

European auto makers recognize the attraction for U.S. customers who want to take delivery at the factory gates. It may require a lot of additional organization, but as one company official commented, "It is a wonderful opportunity for the manufacturer to present itself."

The attraction these days is not so much in the pile of greenbacks that can be saved. That advantage passed years ago when U.S. tax regulations changed and European and U.S. safety and emission standards began to diversify.

With today's direct sales funneled through official importers and their dealers, the customer's financial gain is minimal. Unofficial channels—the gray market—continue to exist, however, and will as long as Europe offers a wider variety of (unapproved) models and some distinct savings on list prices.

Favorable exchange rates and the resultant strong dollar have made Europe something of a travel bargain, so air traffic from the U.S. to Europe is running at record levels. Consequently, the increased number of upscale consumers in Europe with a propensity to own European makes has made the idea of taking delivery of a new car in Europe even more appealing.

What seems to appeal most to customers who take delivery in Europe is the free transport it provides. If the pickup is tied in with a vacation, the buyer can dispense with air and rail costs and with car rental charges. These are not inconsiderable in Europe. A month's rental of a car such as a Volvo 240 is around $1,000. A big BMW may cost double that, and a Mercedes-Benz around $3,000.

In contrast, direct-delivery cost advantages compared with U.S. dealer delivery are marginal. Jaguar's direct sales manager, Gavin Thompson, estimates it is around one percent. Tora Engstrom, of Volvo's tourist and diplomatic service, estimates about $1,000 when the final bill is tallied. BMW says about $750.

Such savings would contribute toward a family's air fares across the Atlantic. The real payback would only begin when the car is used in touring Europe on the vacation.

Nevertheless, there is some resistance to the schemes from U.S. dealers. Jaguar limits the number of orders it will accept for factory delivery. The U.S. remains Jaguar's key market, and it wants to put as many orders as possible through the dealer network which has helped it grow so dramatically in recent years.

Tourist Deliveries

	6 Mos., 1985	6 Mos., 1984
Alfa	31	N.P.*
Audi	433	722
BMW	1,893	1,560
Mercedes	1,395	1,950
Saab	625	595
VW	1,369	1,455
Volvo	1,376	1,193

*—No program.

An executive at another import company admits, "There are some dealers who just don't understand the scheme. They seem to forget that all they have to do is take the order. There's no extra work or stock to finance."

Whatever the misgivings, tourist delivery is here to stay. Among its pioneers is Daimler-Benz, which every working day hands over between 400 and 800 cars to customers as they emerge from the Sindelfingen assembly plant near Stuttgart.

Ninety percent of customers are from the domestic market. Indeed, every other West German Mercedes driver has picked the car up at the factory. The remainder are handed over to tourists, and most of those are from the U.S.

Such substantial numbers require a major delivery facility. Daimler-Benz's present center was opened four and one-half years ago and employs about 250 people. Its amenities range from cafes to a full restaurant, from private suites to showers and shops. A factory tour is an integral part of the arrangements.

At the other end of the scale is a company like Jaguar. It offers a more personal service to between twenty and thirty customers each week. "We couldn't do forty or fifty a week. The cars just aren't available, and we wouldn't be able to look after each customer properly," explains Thompson.

But the business has grown sufficiently for Jaguar to create a new center for the purpose. It is located next to the recently opened museum, which houses a small collection of significant Jaguar models.

Similarly, factory tours and visits to its splendid museum are part of the Porsche program. Its facilities have been upgraded, but there is a longer-term plan to create a new tourist delivery center at the Stuttgart factory—but not until the new paint shop has been completed toward the end of this year.

Porsche reports that tourist deliveries are seasonal. In the first half of this year the number was just over 120, but between the factory start-up after the summer break and the end of the year it expects to hand over 400 to visiting U.S. customers.

In Sweden, Volvo's expectation is for around 9,000 deliveries this year. The figure includes 25 percent to diplomats and about 35 percent to military personnel stationed in Europe, particularly in West Germany. The remainder go to tourists and business people working abroad.

Saab also reports good business with American service personnel stationed in West Germany. In total, it expects to sell up to 5,000 vehicles this year through its international and diplomatic sales unit based in Volvo territory in Gothenberg.

All companies report growth in the business. For Saab it has boomed the past four or five years, but is now growing at about ten percent a year. At Daimler-Benz the introduction of the new mid-range model in the U.S. is expected to add impetus. BMW was dealing in hundreds, now it's thousands. The company plans to streamline its delivery center, currently located about three miles from its Munich headquarters.

All companies offer added bonuses of various sorts. For a small concern like Jaguar it is personal service, such as being picked up at an airport or station. At Volvo, free car passage on the ferries to Denmark and West Germany can be arranged. BMW has a special deal with local hotels for reduced rates.

In addition, the larger companies offer collection and return facilities at various points across Europe. If a customer wants to fly home from Paris, Mercedes will arrange for the car to be picked up, shipped to the U.S., prepared to local standards and delivered to the customer's local dealer.

At Volvo, Engstrom says, "You buy a package with your car. What you like, the insurance, the accessories, the delivery program, it's all organized."

Women

Continued from Page E-6

sponsorship of more prime time TV programming, which Chevrolet believes is viewed by a larger number of women than men.

The division also will sponsor some national daytime TV programming, "by the first of the year," Staudt said, and will likely make some daytime soap opera buys early next year.

There is some minimal danger, Staudt conceded, that the new aimed-at-women advertising could "turn off" traditional male buyers, but it is not likely many males will see the women's service magazine ads, he said.

"I think we can add some emphasis to women's marketing without being detrimental to men's marketing efforts," Staudt said.

In addition to all of the concerns women had about matters under factory control, there are still some areas of concern at the dealership, Chevrolet found; The use of terms of endearment by sales personnel, being ignored by sales personnel, being patronized by sales personnel and feeling uncomfortable in the service department were all common complaints.

The auto companies have known for some time that dealership personnel can thwart any campaign, so most of the companies have been holding seminars and training sessions for dealers and sales personnel to re-educate them about the buying power of women and the proper means of selling to them and servicing their vehicles.

Dealers themselves realize there is a problem and that they, too, need to improve their own operations to better serve the needs of women customers.

At February's NADA convention there will be a workshop devoted to this very matter, called "Attracting the Woman Customer."

The workshop will be conducted by Carol J. Coby, a multi-talented woman who has PR, government relations and televison reporting experience. She also has conducted similar seminars at a Milwaukee dealership already.

She recommends, among other things, that dealers conduct consumer information seminars for women, without the "powder puff" touch. Koby has a standard format and suggests covering topics like finance and insurance, value buying, leasing vs. buying, slecting a repair shop and even driving and the law.

Porsche's racing program is the linchpin of its marketing effort. It is looking to the showroom stock series to showcase the 944 Turbo.

Looking for life's achievers

Porsche's niche in the specialty-car market

By Matt DeLorenzo
Los Angeles Reporter

Detroit's fascination for the Yuppie phenomenon is not shared by all the imports, especially an expensive, European import like Porsche.

John Baker, a spokesman for Porsche Cars North America, said that "we are very much in the specialty car market," adding that "when you sell only 22,000 cars a year, it's hard to say you have a trend established in one direction or another."

The Porsche buyer is clearly a different breed, Baker said. "The only word we use to clump them together is a self-generated word —achiever. Our owners are active, aggressive and players in life rather than spectators." Their hobbies are more likely to be tennis or skiing rather than softball or bowling.

Advertising to the potential Porsche buyer who has always dreamed of owning one is like preaching to the converted. However, Porsche's launch campaign was geared to not only getting the message to the faithful, but reaching out as well to those "players" in life who didn't quite understand the facts behind the Porsche mystique. It's a campaign that the company will be sticking to in 1986, according to Baker.

Last year, the company launched a 14-page insert in a selected number of magazines which included business and financial publications. The list of achievers who buy Porsches are business people, Baker explained. This year's program "is following the same theme, with double page ads following with full page ads in the Wall Street Journal. There will be a very selective television buy."

Last year the company released a television commercial that featured Dr. Ferry Porsche walking through a warehouse with famous cars of the past and talking about the quest for excellence. That program was specifically designed to reach those achievers who were unclear on what Porsche meant.

"Early research showed us among people who currently own a Porsche, they clearly understand the company's racing heritage and dedication to engineering excellence. Among those people who could own a Porsche, but didn't, that perception of Porsche was cluttered."

Porsche combined the theme of racing heritage, the quest for engineering excellence and even showed that a Dr. Porsche did exist and developed the spot. "There was no heavy advertising for our three lines, we talked about Porsche and then said in the print advertising, we have these three lines to sell (944, 911 and 928)."

The image that Porsche projects is that it is "first and foremost an engineering company."

Porsche's racing program will continue to be the linchpin of its overall marketing effort. "Competition is part of our heritage. We would be remiss if we didn't mention competition in the U.S.," Baker said. A Porsche Cup has been established for the U.S. with an $82,500 purse to be split by all the top drivers in their respective categories using the product. In addition to supporting privateers racing in IMSA and SCCA prototype, GT and Trans AM series, Porsche is also looking towards the showroom stock series in both assocations as a showcase for the 944 Turbo.

Baker said that other elements of Porsche's marketing program is a direct mail campaign on 928 to selected prospects and, in an effort to deal with the gray market, the introduction of the 911 Turbo Carerra and a holding the line on prices.

"Part of our entire effort is to reduce the motivation or temptation of people to get involved in the gray market. We've shown considerable restraint in pricing the two new cars (the 944 Turbo at $29,500 and the 911 Turbo at $48,000). There's no motivation for a customer to take the risk of the gray market."

In addition to holding the line on prices here, Baker said Porsche will allow the price of is cars sold in Germany to climb over time to reflect the value of the vehicles in the U.S.

The approach taken to the Porsche buyer will also be somewhat different that the approach taken by other auto makers toward their customers. "We don't look on them as buyers as much as we see them as owners. And Porsche owners could be 10 or 15 years. We want to make Porsche ownership a pleasant experience," Baker said, and that goes beyond the purchase to include either maintaining the car on the part of the owner or bringing the vehicle in for servicing. In making all their contacts with the company as pleasant as possible, Baker said "we're almost in the entertainment business, not the car business."

Leading 1984 auto advertising spenders

Several auto marketing units rank in Advertising Age Top 100

Several of the companies which market cars and trucks in the U.S. are included in Advertising Age's *list of Top 100 Advertisers. The following edited excerpts detail 1984 ad spending of some of the larger marketing units. The entire listings will appear in the September 26 issue of* Advertising Age.

AMC

American Motors Corporation had total ad spending of $120.5 million in 1984, an increase of 19.5 percent over 1983.

Measured advertising in the nine media tracked in this report was $94.7 million, up 13.6 percent from 1983. Vehicles or ad categories responsible for the boost in measured totals included the launch of the Jeep Cherokee at $10.2 million in measured advertising, mostly TV and some magazine; launch of the Jeep CJ at $3.3 million in measured spending; Jeep Wagoneer spent $6 million, up from $3.2 million; the Renault Encore, $15.4 million, up 45 percent; and a nonspecific AMC passenger car category, $8.7 million, up from $1.5 million in 1983.

Spending dropped for the Renault Fuego to $6.2 million from $10 million in 1983; the AMC Eagle to $3.5 million from $5.8 million; and nonspecific Jeep vehicles, $3.5 million, down from $11.1 million. Spending remained stable for Renault Alliance at $20.6 million.

In February, 1985, AMC used a $6 million mid-model year sixteen-page magazine insert and TV campaign to show all of its line at one time and help pump up the Renault name. The "Buyers Guide" insert compared features of the AMC-marketed vehicles with their competition. "We challenge you to find better vehicles anywhere," a headline said.

CHRYSLER

Chrysler Corporation increased advertising spending 23.3 percent to $317,440,000 in 1984 from $257,657,000 in 1983.

Chrysler's measured ad spending rose 21.4 percent, paced by a thirty-seven percent gain for magazines. Factory contributions to dealer advertising associations increased by more than thirty percent, from an estimated $28 million in 1983 to $41 million in 1984, as Chrysler followed the industry into much closer cooperation with dealer ad groups.

As Chrysler moves toward greater regionalization of national image advertising, it supplements that by putting up matching funds for specific projects with dealer ad groups.

In September, Chrysler joined Chevrolet in shunning high-cost TV advertising by cutting network spending by eight percent for the 1985 model year, paring TV's share of the Chrysler ad dollar by two or three percent. The company diverted $7 million to $10 million from TV. Chrysler-Plymouth shifted ad dollars to print, radio and cable TV, and Dodge moved toward cable and magazines.

In late October, Chrysler embarked on a network TV ad strategy that included participation as a multi-million-dollar investor in the production of made-for-TV movies. The five-year plan included co-production ventures for at least two movies per season, beginning in 1986. The scheduling of movies will be pinned to launches of new Chrysler cars, with Chrysler as the exclusive automotive sponsor.

FORD

Ford Motor Company increased U.S. advertising spending by 3.8 percent, to $559.4 million, over the previous year.

Ford channeled virtually all of its increased ad spending into factory contributions to dealer advertising associations. Ford's direct factory media spending actually dropped $2.06 million in 1984 to $477 million, which can partially be traced to less rebate and low-cost financing advertising and fewer new products than in 1983. Ford Division factory advertising was virtually unchanged at an estimated $297 million and L-M rose 15 percent to an estimated $115 million.

But Ford Division contributions increased to an estimated $59.4 million from $45 million in 1933, and L-M rose to an estimated $23 million from $16 million in 1983. Cars in the Ford Division recorded some of the larger measured media totals, according to the six-media monitored by Leading National Advertisers—Escort $17.5 million, down 11 percent from 1983; Ford LTD $13.9 million, up 10.3 percent; Ford Mustang $14.8 million, up 59 percent; Ford Tempo $28.1 million, up 1.8 percent.

During 1984, Ford increased its measured advertising 4.5 percent to $387.4 million. In doing so, it boosted newspapers twenty-five percent to $62.1 million; magazines 21 percent to $97.1 million; network cable 33 percent to $6.9 million, and spot TV 5.4 percent to $39.5 million. However, it cut spending in three media—network TV by 4.7 percent to $164.3 million, spot radio 17 percent to $10.8 million and network radio 79 percent to $1.5 million. Outdoor and farm, both minor media for the agency, remained stable.

Ford's TV media strategy in 1984 called for buying total or partial exclusivity on high-profile TV events. Network TV ad spending for the year dropped 4.7 percent to $164.3 million, however, as the company swung to what it considered better values in magazines, newspaper, network cable and direct mail.

On the Lincoln-Mercury side, three cars got most of the spring attention in 1984: Cougar for a sales success, Topaz to strengthen brand awareness and Mark VII because the luxury car was new for the model year. The Cougar got $20.9 million in measured spending, down 12.6 percent; Topaz $22.9 million, up 16.8 percent, and Mark VII $14.1 million (for all Continentals), up 90.5 percent.

L-M singled out only those vehicles with aerodynamic designs for company media spending for model year 1985. The stars under the Mercury label were Cougar, Cougar XR7 and Topaz. For Lincoln it was the Continental Mark VII LSC. All others were banished to dealer group ad efforts, except for the Mercury Capri, which received virtually no ad spending.

Ford spent $40.3 million in measured media on trucks, down 7.4 percent, placing $15.3 million of that behind Ranger, down 33.5 percent, and $4.8 million in support of Bronco, down twenty percent.

In spring, 1985, Ford prepared for the fall introduction of its 1986 Aerostar minivan. Aerostar will get an initial ad push of $20 million.

GM

General Motors Corporation increased 1984 ad expenditures by $118.95 million or 18.4 percent to an estimated $763.8 million on record sales and earnings.

In mid-1984 as the corporate-wide reorganization began to take form, the GM Media Council was formed to take a comprehensive look at GM's relationship with its advertising agencies and to maximize effectiveness of the automaker's advertising. Several sweeping changes occurred in the first year of the Council's operation.

Chevrolet led a mini-revolt among auto marketers at continually rising network TV time costs in the fall, when it dropped its domestic-exclusivity for the 1985 Super Bowl, saying the $1 million-a-minute pricetag was too high to justify.

At Pontiac, introductory ad spending for Grand Am totalled $6.3 million in the last three months of calendar 1984, 90 percent in network TV and most of the rest for magazines.

Other spending, which was for all of 1984, was concentrated on the other four image cars: Sunbird (formerly 2000), $8.28 million; 6000, $6.59 million; Firebird (including Trans Am), $6.71 million; and Fiero, $779,000. Among the image cars, TV got $27.04 million, magazines got $3.84 million.

To bolster the youthful, sporty pitch, Pontiac sponsored concert tours and increased its participation in motorsports.

Pontiac sent rock duo Hall & Oates on a multi-city concert tour backed by a $200,000 promotional ad budget.

GM accelerated matching contributions to dealer advertising groups making that the fastest growing area of GM ad spending with an estimated $105.8 million in factory contributions matching per-car levies the dealer groups assessed themselves.

MAZDA

Mazda Motors of America had ad expenditures estimated at $71.8 million, down 3.6 percent from a year earlier.

Mazda spent $51.8 million in measured media in 1984, up 11.2 percent from the previous year. The measured total for 1984 includes $1.3 million for cable TV, a category not reflected in last year's monitored figures. However, it does not include a measured $10.2 million in dealer advertising.

Network and spot TV and continued use of auto enthusiast magazines and national newsweeklies once again were the media mainstays behind the introduction of Mazda's 1985 model line. Measured ad spending broke down to $26.3 million in network TV, down 3.3 percent from 1983; $4.1 million in spot TV, up 78.3 percent, and $16.8 million in magazines, up 15.1 percent. Mazda probably spends a higher percentage of media dollars for magazines than most other automotive advertisers.

Measured ad spending on the RX-7 was $6.1 million, including $3.7 million in network, $2.3 million in magazines, and $183,400 spot TV.

The 626 model was supported with an expenditure of $9 million, of which $4.7 million went to magazines, $3.2 million to network and $1.1 million to spot TV.

Measured media spending for the GLC models totaled $6 million —$3.5 million in network TV and $2.5 million for magazines.

Aggressive promotion of the 1985 B2000 and SE-5 pickup trucks accounted for more than one-third of the total annual budget and included $19 million in measured media. The major portion, $14.8 million, went for network and spot TV and $3.5 million for magazines.

NISSAN

Nissan Motor Corporation U.S.A. had estimated ad expenditures of $164.2 million, up 32.6 percent from 1983.

The upscale cars in the Nissan lineup accounted for a major portion of the measured ad spending in 1984, with a total of $15.5 million recorded for the 300ZX, up 115 percent from 1983, and $12.2 million for the 200SX model, up from $1.9 million in 1983, according to Leading National Advertisers, which tracks six media spending. TV, both spot and network ($22.9 million), and magazines ($4.5 million) provided the main thrust of the promotional effort behind these models. Nissan spent only $1.9 million on the 200 SX and $7.2 million on the 300 ZX in 1983.

Measured media ad expenditures for the top-selling Sentra dropped to $8 million, from $14.6 million in 1983. The Maxima drew $7.3 million in measured spending, up from $1.2 million the prior year.

General promotion as a category drew $7.4 million, up from $2.6 million in measured spending in 1983, and Nissan passenger cars, apart from specific promotional budgets, spent $4.9 million vs. $288,500 in 1983.

In addition to the total ad expenditure of $129.3 million in measured media, Nissan Motor Com-

Continued on Page E-42

Spending

Continued from Page E-49

pany local dealers and franchisees spent $12 million.

Unmeasured media was estimated at $35 million. Nissan compact trucks drew $36.9 million ($20 million in spot TV and $13.8 million from network TV); King Cab compact trucks got $6.1 million, up from $1.2 million in 1983, and the S/T compact truck received $4.2 million, up from $1.6 million in 1983.

The spending trend in measured media for virtually all Nissan/Datsun lines in 1985 was network TV, 39 percent; spot TV, 32 percent; magazines, 11 percent; newspapers, 10 percent, and lesser amounts in the remaining measured media.

In support of the 1985 car line, the media mix of TV radio, newspapers and magazines followed patterns established a year earlier, but with greater support in local markets.

TOYOTA

Toyota Motor Sales U.S.A., had estimated U.S. ad expenditures of $137.9 million in 1984, up 15.9 percent from the previous year.

Toyota responded to a reduced U.S. car market share with a substantial increase in advertising, boosting measured media expenditures in the nine media tracked in this report to $119.9 million, up 12.9 percent from 1983.

Of these measured expenditures, Toyota spent $18.5 million on network TV and $58.3 million on spot TV , a total of $76.8 million compared with $70 million in 1983. Toyota is the only Japanese importer to spend more money on spot TV than network TV. The company also spent $15.4 million for magazines, a $3 million increase over year-earlier figures.

Once again cable TV was part of the Toyota ad budget, with a total of $5.3 million spent for packages on the sports-oriented USA Cable Network and superstation WTBS. The expenditure was only slightly higher than for 1983.

Among the many significant unmeasured expenditures budgeted for the 1985 model year was Toyota's participation in a record twenty-one auto shows in major metropolitan areas throughout the U.S. The exhibits featured $1 million of new high-tech displays, which debuted at the Dallas dealer meeting in October.

The unmeasured total also encompassed Toyota's heavy involvement in a motor sports program that included the Toyota Grand Prix and pro-celebrity race at Long Beach and the Olympus Toyota Pro Rally, largest motor sports rally in the U.S., held at Tumwater, Wash. Also not measured were expenditures for merchandising and promotion materials used to support the marketing effort at the dealer level.

Corolla, Toyota's U.S. sales leader, accounted for nearly $20 million in measured media expenditures during the year. Corolla was the company's most heavily advertised nameplate.

But as a category, Toyota trucks of every variety took $43.4 million of the measured spending, up 50.7 percent from the previous year in the six media traced by Leading National Advertisers. Record expenditures in most media supported the "Oh What A Feeling" ad slogan for the sixth consecutive year.

VOLKSWAGEN

Volkswagen of America reduced its U.S. advertising spending in 1984 to an estimated $103 million.

Two new models in the VW 1985 product line, the new Jetta sedan and the Golf coupe, were on the receiving end of the biggest introductory budget in the company's history. Both got strong emphasis on their German heritage as VW endeavored to shed its image as "the Rabbit Car Company," with the upscale Jetta getting about 60 percent of of the ad budget.

Measured media figures for 1984 found a major portion of VW ad expenditures devoted to the Jetta, a total of $14.6 million, with the spending evenly dividedly between network TV and magazines. Budget for the new Golf in measured media was $9.6 million, $5.8 million for TV and $3.5 million for magazines.

The Audi models had the support of $16 million in measured media, with about $8.7 million devoted to the Rabbit and $5 million for the Quantum.

Use of TV in 1984, according to measured media, remained virtually unchanged from the previous year, with spot at $16 million and network at the $22 million level. Magazines, however, registered a $4.4 milion drop in 1984, to $33.5 million, from $37.9 million in 1983.

Unmeasured media, say VW marketers, consisted of heavy involvement in motor sports activity and sponsorship of promotional caravans to Super Vee races; direct mail merchandising program; and collateral, point-of-sale and dealer advertising materials.

Ad spending for the eight-week Golf and Jetta introductory campaign began in November 1984 and for pre-launch teasers came to more than $26 million, up twenty percent over the entire fourth quarter of a year earlier. Another substantial expenditure was budgeted for the introduction of the new Golf GTI in January.

TV ads for the 1985 introductions broke in November on CBS-TV 's mini-series "Ellis Island." Except for this and "60 Minutes," all other programming consisted of sports, mostly football coverage. In addition to the network TV , which received fifty-five percent of the budget, national magazines came in for a forty-one percent allotment, with the remainder of introduction expenditures going into newspapers, outdoor advertising and telemarketing.

In mid-1985 VW introduced three of its limited Wolfsburg Edition models—the Scirocco, the Cabriolet and the Vanagon camper—which received the last gasp of the company's advertising for the model year. The mid-year introductions had the support of newsweeklies and outdoor magazines, a print-only campaign.

The end of August, 1984, saw the end of the distribution agreement between Porsche and VW, a $9 million annual marketing effort formerly handled by the VW Porsche-Audi Division. Loss of the Porsche advertising is reflected in the reduced ad expenditures reported for VW in 1984.

Audi sales gains were posted even with departure of Porsche, although most of Audi's 409 U.S. dealers continue to sell Porsches. Leading National Advertisers reported Audi's measured media spending for 1983 at $15 million, a figure that rose near the $20 million level in 1984 as Audi placed strong emphasis on models in a more upscale price range.

The upscale models took a portion of the 1984 ad dollars and again in 1985. But the facelifted Audi 4000 and 5000 models, which remain the bread-and-butter cars in the Audi lineup, accounted for the lion's share or about $17.5 million of the total $20 million 1984 ad bu..get.

Introducing the Chairman

New computer series for parts warehousing

CLEVELAND.—A new series of computer systems designed specifically for the auto parts warehouse and retail businesses has been introduced by Kovachy Data Systems Inc. (KDSI).

Company president Mark Kovachy says the Chairman series is based on experience gained from KDSI's two sister companies: United Warehouse Distributing and Kovachy Brothers Auto Parts Stores.

"Our family has been operating a warehouse and retail business since the 1920s," says Kovachy. "When we went to computerize our companies, we found that none of the systems available let us continue to manage our businesses properly."

Kovachy assembled a team of experts and developed a system in-house, specific to the needs of its auto parts business.

According to James Bender, president of J. L. Bender & Associates, a Chicago-based organization marketing the systems nationally, the Chairman has features unique to the auto parts industry: "Our systems offer full point-of-sale control, inventory management, purchasing control that considers seasonal selling trends before making buy suggestions, and built-in word processing and electronic mail.

"But what really makes them stand out is the unique way they track product cores, and the ease with which a company can add the system to their operation."

Bender says the system works within the normal operation of an auto parts business, and requires no special parts numbering, account file changes or "computer-like" operations to learn: "We don't even have a manual for the store staff. They just press the keyboard's Help key and the system shows them what to do next, and how."

The Chairman series is available from KDSI in versions designed for any size operation, from single store to national chain, with computers manufactured by IBM and General Automation, and is supported by national sales, service and support organizations.

R&R for Mercedes-Benz

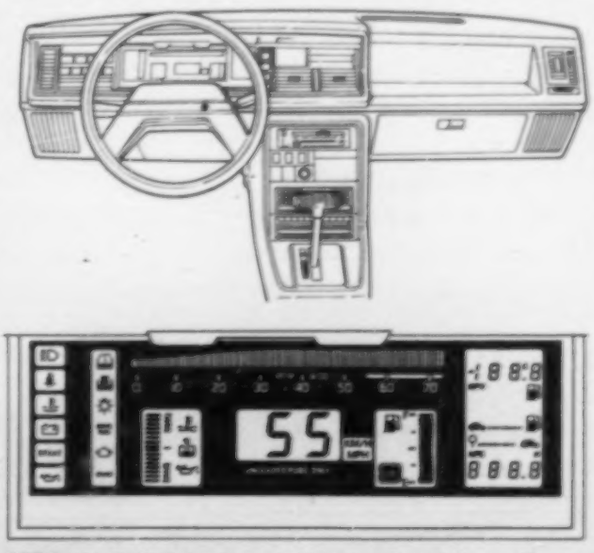
Computer systems for dealers

DAYTON.—Reynolds and Reynolds has announced Mercedes-Benz of North America Incorporated's approval of Reynolds' Dealer Communications System for use by M-B dealers.

The system is designed to help Mercedes-Benz dealers improve cash flow by allowing efficient transmission of vehicle sales and parts orders; increasing customer satisfaction through quicker location of cars and parts; and speeding communications.

Roger Kitzman, vice president of R&R's Automotive Computer Systems and Services Division, says, "The computerization needs of Mercedes-Benz dealers vary. We provide hardware alternatives so dealers can choose a system that best meets their requirements—DCS operating on either the R&R IBM PC or the R&R VIM/NET in-house computer, 3000 and 9000 series."

Both IBM PC and VIM/NET feature a communications package that eliminates the need for additional phone modems and provides a security system which guards dealership information.



AMC hopes the instrument panel of the new Renault Encore Electronic model will be a dealer selling point for 1986.

Aero audio

New remote-controls

DEARBORN.—Ford Motor Co.'s Aerostar minivan will feature a new optional sound system with remote controls for tuning the radio from either the front or rear compartment, the company said.

This is the first time Ford has offered remote radio controls in production vehicles.

The system in Aerostar consists of an electronically tuned AM/FM stereo search radio with cassette tape player and graphic equalizer in the front compartment, a separate control panel in the rear and six speakers, Ford said.

The rear panel has two headphone jacks with individual volume controls, seek buttons to change stations, a memory button for selecting stations programmed in the radio, and an on/off knob for rear speakers.

Passengers in the rear compartment can thus use the headphone sets to listen to the radio or to tapes without disturbing passengers in the front seat.

For 1985, the cassette tape player has a new feature that lets the listener skip over a selection to the start of the next or replay the one that just finished.

Two 5-inch speakers are mounted on the instrument panel, two 6-by-9-inch coaxial speakers are in the rear trim panels and two 3½-inch speakers are in the rear door.

The Aerostar commercial van is equipped with the stereo system and the six speakers, but without the rear controls.

A second optional sound system for Aerostar is similar to the first, but has a mechanically tuned radio.

The radio is also available without cassette tape player.

Standard equipment on the Aerostar is a mechanically tuned AM radio with one 5-inch speaker in the right side of the instrument panel.

Soccer cars

Ford sponsors games

MEXICO CITY.—Ford de Mexico and its chain of Mexican distributors have been assigned exclusive rights to provide all cars necessary for the World Cup Soccer Games to be held in Mexico in 1986.

The World Cup coincides with the celebration of Ford's 60th anniversary as a part of the Mexican automotive industry.

Though more of them are on the road

Fewer bugs in front-drive cars

ROCHESTER, Wis.—The percentage of fleet mangers reporting problems with front-wheel-drive vehicles is declining, according to fleet surveys conducted by Runzheimer Reports on Transportation, an industry newsletter.

The fleet composition data, covering 1984, is based on 351 responses (representing 238,300 vehicles). Responses contributing to the 1983 year-end survey numbered 377, representing 265,000 vehicles, the report said.

Comparing 1984 fleet vehicles with 1983, fwd maintenance problems decreased by 10 percentage points, according to the report.

In 1983, 32 percent of fleet managers experienced excessive or unusual maintenance on their fwd vehicles. In 1984, only 22 percent of the responding fleets reported such problems, the report said.

The newsletter noted that the significance of this decrease is underscored by the fact that the percentage of fwd cars in fleets is on the rise.

In 1983, the average U.S. fleet consisted of 59 percent rear-wheel-drive and 41 percent fwd vehicles. According to latest data, 54 percent of fleet vehicles are rwd and 46 percent fwd—a swing of five percentage points.

Follow-up telephone interviews conducted by Runzheimer uncovered some common problems related to fwd vehicles.

Asked to specify a recurrent problem, one fleet manager said the struts of a fwd vehicle wear out after about 20,000 miles.

"It's very expensive when you have front-end problems, but we've alleviated some of that (expense) by getting extended warranty contracts, which are expensive themselves, but still cheaper than constantly replacing struts," the respondent said.

Another fleet manager said, "We've had a few problems with suspensions and the expense of repairing them. Overall, there is quite a bit of expense with fwd (vehicles), but the drivers prefer them for their handling and performance."

A second area of difficulty is front-end alignment. One fleet manager said his problems originated during production.

"I've had alignment problems with 1985 Chryslers and Chevrolets—they came with the wrong size tires," he said.

On 15 counts

DeLorean indicted by U.S. grand jury

Continued from Page 3

heimer & Co. put together a group of wealthy U.S. investors and formed the DeLorean Research Limited Partnership.

The investors contributed $18.75 million for R&D work on the sports car. After commissions and fees, about $15.5 million went into the project. On Nov. 1, 1978, DeLorean contracted with a Geneva-based company known as GPD Services, Inc., to finish vehicle development of the sports car, then codenamed the DMC-12.

As it turned out, GPD was a Panamanian corporation with no assets, no personnel, no equipment and no apparent automotive engineering experieince.

GPD then subcontracted A.C.B. (Colin) Chapman and Lotus Cars to do the actual engineering work.

In late 1978 and early 1979, DRLP paid $12.5 million to GPD. The Northern Ireland DeLorean company, DeLorean Motor Cars, Ltd., largely funded with British Government tax dollars, paid another $5.15 million for a total of $17.65 million.

The $17.65 million never made it to Lotus. The Norwich-based company, an audit later showed, was paid about $22 million directly by DMCL and received nothing from GPD.

Instead, Marie-Denise Juhan Perrin, a business associate of Chapman who had GPD power-of attorney, cashed the checks. About $8.5 million went into an escrow account at Barclays Bank in London.

A year later, in September, 1979, the $8.5 million principal, with interest, had grown to $9.3 million, bankruptcy court documents show. The $9.3 million was wire-transferred to the account of Rothschild Bank AG, of Zurich, at Chase bank in New York. Rothschild then wire-transferred the $9.3 million to an account of Amsterdam-based Pierson, Heldring, Pierson Bank, in New York, at Mellon Bank.

Pierson then wire-transferred $8.9 million into John DeLorean's personal checking account at Citibank.

Toyota, Mazda and AMC in NHTSA defect inquiry

WASHINGTON.—NHTSA has decided to look into alleged sudden-acceleration problems involving certain Toyota, Mazda and American Motors products, according to its latest defect investigations report.

The Toyotas are 1981-1984 Cressida models which the safety agency believes may be prone to sudden acceleration. NHTSA had once before investigated the approximately 141,000 models that might be involved.

The Mazdas are 1981-1982 GLC models which NHTSA believes may be prone to sticking throttles. Approximately 116,000 vehicles are covered by this preliminary investigation.

The AMC cars are 1983-1985 Renault Alliance/Encore models and more than 400,000 vehicles are involved. NHTSA's investigation into those vehicles is farther along than the Toyota and Mazda investigations. It involves an engineering analysis, which is the last step before a formal defect investigation is performed.

In addition to the sudden-acceleration investigations, NHTSA also is taking a preliminary look into alleged power steering and power brake problems in 1982 General Motors school buses.

It has also upgraded investigations into alleged hood-latch problems with 1981-1984 Ford Escort/Lynx cars, alleged seatback-recliner problems in 1983-1985 GM cars and alleged power brake difficulties in 1982 GM A-body cars.

On the other side of the scale, it has decided to close investigations involving alleged door-hinge problems on 1981-1982 Chrysler K-cars, alleged tie-rod problems on 1984-1985 Pontiac Fieros, alleged brake-hose defects on 1980-1985 IHC school buses and alleged frame cracks in 1978-1982 Ford CLT 9000 trucks on the ground that no defect trend can be discerned and no unreasonable risk exists.

Award for King

Louis King, left, King Oldsmobile, Fort Lauderdale, receives Oldsmobile's Elite Award from John Martabano, Jacksonville zone manager, for selling 14,928 Oldsmobiles in 1984. Witnessing the ceremony are Terry Ruppenthal, second from left, King general manager, and Jim Danhof, assistant zone manager.

Imports jump to 30 pct. of market

July registrations best since '78

By Jenny L. King
Detroit Reporter

New-car registrations spiraled to their highest total of the calendar year in July and were the best for the month since the record year of 1978.

The story behind the headlines belonged to imports, up more than 65,000 in number July to July. Their share of the market grew by 5.82 percentage points.

According to figures released by R.L. Polk & Co., registrations of both domestic and imported cars reached 949,133 in July, up 2.84 percent from 922,910 a month earlier and 5.06 percent ahead of July, 1984, when the total was 903,390.

Highest-ever registrations for July—1,061,554—were recorded in 1978.

The domestic total dropped 1.27 percent from June to July, to 658,-395 from 666,863. The figure was down 3.08 percent from 679,287 domestics in July, 1984.

Imports hit a record 290,738, up 29.73 percent from 224,103 a year earlier. Their share of the market hit 30.63 percent, not a record but the first time imports have taken 30 percent since August, 1983. The largest market share for the imports was 34.16 percent in August, 1982, on registrations of just 214,290. That was at the bottom of the domestic sales slump.

Chrysler Corp. was the only domestic auto maker to show an improvement in its share of the market this July versus 1984. And that was a dainty 0.06-percentage-point increase, to 9.37 percent from 9.31 percent. Ford Motor Co. was off 0.79 percentage points, American Motors dropped 0.82 percentage points to less than one percent of the total market and General Motors plunged 4.27 percentage points July to July.

Excluding imports, GM slipped to 59.71 percent of the market from 60.77 percent; Ford was up to 25.35 percent from 24.44 percent; Chrysler climbed to 13.51 percent from 12.39 percent; AMC skidded to 1.43 percent from 2.40 percent, and miscellaneous domestics failed to show up on the percentages scoreboard with only 26 registrations this year versus 20 in July, 1984.

The imports' 30.63 percent of the market was the largest single segment in the market-class breakdown. It was followed by U.S. intermediates at 26.05 percent; compacts at 15.27 percent; subcompacts at 10.08 percent; standards at 9.53 percent, and luxury cars at 8.44 percent.

The July, 1984, market-class spectrum featured imports at 24.81 percent; intermediates at 25.34 percent; compacts at 19.21 percent; subcompacts at 11.71 percent; standards at 11.02 percent, and luxury models at 7.91 percent.

The domestics-only market for July of this year featured intermediates at 37.56 percent; compacts at 22.02 percent; subcompacts at 14.53 percent; standards at 13.73 percent, and luxuries at 12.16 percent.

• Total registrations at the end of the first seven months of 1985 were up 4.89 percent from their 1984 level, climbing to 6,208,100 from 5,918,799. Registrations this year maintained a 22.98-percent distance ahead of 1983 when the seven-months total was 5,047,873.

Imports were up 12.51 percent year to year; domestics had only a 2.48-percent gain.

The domestic total of 4,607,551 included market share increases for Chrysler and Ford. Chrysler gained 1.47 percentage points, moving up to 10.87 percent from 9.40 percent; Ford picked up 0.64 percentage points, progressing to 19.50 percent from 18.86 percent.

Imports gained 1.75 percentage points year to year, based on registrations of 1,600,549 in 1985 compared with 1,422,531 the preceding year. Their year-to-date share expanded to 25.78 percent from 24.03 percent.

GM's year-to-date share of the market slipped to 42.61 percent from 45.87 percent in 1984.

The market without imports was divided in this manner: GM at 57.41 percent, Ford at 26.27 percent, Chrysler at 14.65 percent and AMC at 1.67 percent. In 1984 GM had 60.38 percent, Ford had 24.83 percent, Chrysler had 12.37 percent and AMC had 2.42 percent.

Alaska gets tough on dealers using supplemental stickers

Continued from Page 8

general agreement. The retailers asked for more guidelines from the attorney general's office and were awaiting them when the business advisory was issued, he said.

"We had no quarrel with it," said Sutton. "Then the next thing we heard from them was this big announcement."

The attorney general's office issued a similar business advisory to dealers in October, 1983. But Brown said the problem has not been alleviated.

"Despite this earlier business advisory, there still appears to be some confusion as to practices we consider unfair or deceptive," Brown said in a Sept. 6 letter to dealers which disclosed the new advisory. "The purpose of this advisory is to set forth clearly the type of practices we consider unfair or deceptive."

After reviewing the advisory and making changes in supplemental stickers, dealers were asked by Brown to complete a form and return it to the attorney general's office by Oct. 11.

The forms will be reviewed for compliance and the Consumer Protection Section will "talk . . . informally" with those who are not complying.

Sutton contended the business advisory is not necessary in the Anchorage area, where he said the majority of vehicles in the state are sold.

"Discussion would have led to compliance by dealers who perhaps were not in compliance," he said.

Sutton said his own dealership has always made clear that additional charges were intended as dealer profit.

"We have always told customers that additional profit is for the added cost of doing business in the state of Alaska," he said. "Our wages are higher, the costs are greater, the heat is more expensive, snow-removal costs are more and flooring costs are higher because we have to carry larger inventory. When you add all those items in, you do need to make more money."

AMC recalls 2,850 Renaults

SOUTHFIELD, Mich.—American Motors is recalling 2,850 1985 Renault Fuegos and Sportwagons.

AMC said that on some of the vehicles, a nut that attaches the steering wheel to the steering shaft may gradually loosen. In addition, AMC said, the Sportwagons equipped with cruise control may have a control cable clip that could become disengaged, thus preventing the engine from returning to normal idle speed.

AMC said it had no reports of accidents or injuries as a result of either condition.

New L-M deal in Alabama

Youngblood-Perry Lincoln-Mercury, Inc., has opened in Montgomery, Ala. Dealership principals Franklin Perry, left, and Robert Youngblood, center, receive a copy of Lincoln-Mercury's sales and service agreement from John Treter, the division's Atlanta district sales manager.

He warns of threat to U.S. exports

Reagan rips protectionist tide

Continued from Page 6

of problems, foremost among them the federal budget deficit, must be addressed before the U.S. can become fully competitive. But, Petersen said, "meanwhile, the U.S. is losing jobs and production." He called the Bentsen bill "a realistic, results-oriented approach" to the problem.

"It would not erect permanent trade barriers, but would induce countries with large trade surpluses to take actions on their own to reduce those surpluses," Petersen said.

"It tells the countries to deal with the problem however they might wish . . . but makes it clear that they must solve the problem and that the U.S. has the will to act if they do not."

But measures similar to that proposed by Bentsen were criticized in a report prepared by the Congressional Budget Office.

The CBO study opposed protective measures, claiming new high tariffs on imported goods would raise U.S. prices, interest rates and the value of the dollar.

Also, the CBO said, new tariffs would diminish the purchasing power of U.S. consumers, raise the prices of imported components used in U.S. finished goods and thereby hurt the competitiveness of such products overseas. A reduction in the incomes of foreign nations would also effect the ability of those countries to buy U.S. products, the CBO said.

Separately, the Business Roundtable, an association of chief executive officers of some 200 major corporations, urged both President Reagan and Congress to exert strong leadership to avoid a "disastrous trade war that could permanently weaken the competitiveness of American industry."

General Motors Chairman Roger B. Smith is a co-chairman of the Roundtable's policy committee and Petersen is a member.

The Roundtable said the alternative to leadership by the Administration will be a "rash of unwise, protectionist bills in Congress—bills that face presidential veto."

Citing the alarming number of U.S. industries seeking some form of import relief, the Roundtable urged Congress to evaluate proposals carefully on the basis of "facts, not emotions or perceptions."

The Roundtable has a 10-point program. Included are better use of existing trade laws, a new round of multilateral trade negotiations, reducing the budget deficit, changing tax law to encourage investment and savings and taking actions to spur exports.

Three recommendations are for trading partners and two apply to Japan. One is to reduce its tariff and non-tariff barriers to increase imports. The other is to shift its domestic policy to encourage domestic consumption and reach better balance in international accounts.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Manufacturers' sales records used for compiling Oklahoma in 1985 and New York and Oklahoma in 1984.

Bills on methanol would give break to gas gulpers

Continued from Page 3

vance that time frame by three years by requiring the Federal Government to buy 5,000 methanol cars annually begnning in 1987.

It would make $10 million available for the purpose that year, followed by another $8 million in fiscal 1988, $5 million in fiscal 1989 and $5 million in fiscal 1990.

As early as next year, it would require that all cars bought by the Federal Government be capable of running on all fuels certified by the EPA; that is, various blended fuels using either methanol or ethanol. To date, the agency has certified none with methanol or ethanol concentration greater than 5 percent.

The Sharp measure would have the government spend $2 million on a long-haul methanol truck demonstration program. A cross-country route would be designated and methanol fuel would be available on that route.

Sharp would give EPA $4 million to run a four-year pilot program on the feasibility of powering urban buses on methanol. EPA would be authorized to buy five buses and set up an interagency group to oversee the various methanol demonstration programs.

By 1991, it would require that in all areas defined as not in compliance with federal ambient air-quality standards, only methanol-powered buses may be purchased.

Various reports and studies would also be required of the Interagency Commission on Methanol.

The prospects for getting a methanol use bill out of Congress this year are clouded because of Congress' tight schedule. But in view of the bipartisan support both the Senate and House measures have, as well as the support of the Administration, its chances are probably better than most.

Fifth Avenue sales jump

DETROIT.—The Chrysler Fifth Avenue is one of Chrysler Corp.'s best-selling models with 1985 model year sales 40 percent ahead of a year ago, Chrysler said.

This Tric Edition graphic system comes from Sharpline Converting, Inc., Wichita. Five color combinations are available.

Dingell joins Ford and GM in backing easier CAFE

Continued from Page 3

than restricting the sale of highly profitable cars.

If that caused significant financial losses to a corporation, the "business judgment" of the directors might be questioned. But directors could argue that despite the short-term losses to the corporation, there were other long-term goals—expansion of market share, etc.—that could be offsetting.

Thus, while CRS said it cannot judge the merits of a shareholder suit without knowing the facts of the case, it did indicate that to prevail in such a suit, shareholders would have substantial legal and factual burdens.

In any case, both GM and Ford have said they cannot and will not plan to break the law.

In other words, their present law violations have all been inadvertent, and they hope those CAFE shortfalls will be covered by carryback credits if NHTSA grants their petitions or by carryback credits plus curtailment in production of large cars and consequent layoffs. Or in Ford's case, by moving production overseas and counting large cars in the import fleet.

GM—which saw some $500 million in credits expire unused because they were beyond the three-year limit—is in the worst straits.

Although GM covered its 1983 noncompliance (24.0 MPG versus the standard of 26 MPG) with carryforward credits, it needs carryback credits both for its deficiency in 1984 models (24.9 MPG versus the standard of 27.0 MPG) and for the projected 1985 deficiency (probably 25.0 versus 27.5 MPG).

GM has petitioned for relief from future CAFE standards even though it expects to be in compliance for some years. Its reasoning is that it needs carryback credits to wipe out its liability for fines for past years.

Whether a company can petition for reasons other than that it cannot meet the standard is a matter in dispute. But since NHTSA is looking only at a possible rollback for the 1986 models, it has not yet been addressed. When NHTSA addresses petitions for future years, it is likely to become a central feature of the debate.

Ford also had enough carryforward credits to make up its deficiency for the 1983 model year (24.3 MPG versus the standard of 26 MPG) and for the 1984 model year (25.8 MPG versus the standard of 27.0 MPG). But it will need to use carryback credits for the 1985 model year (probably 26.3 MPG versus the standard 27.5 MPG).

And for all of Chrysler's objections, it was almost in non-compliance. Its projected 1985 CAFE was 27.3 MPG—two-tenths of an MPG short—until EPA came along with its CAFE adjustment factor which has now pulled Chrysler up to the standard.

Except for the philosophical arguments, nothing new was heard at the Markey hearing. NHTSA head Diane Steed said the Administration favored the workings of the free market but she stopped short of endorsing repeal of the law. However, the lowering of the 1986 CAFE standard to 26 MPG from 27.5 MPG seems a foregone conclusion.

The Center for Auto Safety and a whole raft of energy and environmental groups again opposed lowering of the standard. If—or when—the government does so, some or all may go to court, where they have in general had more success than in their tussles with the Reagan Administration.

EPA and FBI serve warrant on compliance lab

LOS ANGELES.—As part of stepped-up activity in policing laboratories that certify gray-market cars, the EPA and FBI served a criminal search warrant on Fairway Environmental Engineering, a Torrance-based lab on the EPA approved list.

An EPA spokesperson said the agency has stopped processing test packets from Fairway and will begin an administrative review of the lab to determine whether it should be kept on the EPA approved list. Any criminal violations will be handled by the U.S. District Attorney's office in Los Angeles.

Related story, Page 37

In an unrelated case, the EPA suspended Azle Research Lab, Azle, Tex., for one year following an administrative review of its test practices and data submitted to the government. According to the EPA, no criminal charges were filed because the lab cooperated voluntarily with the agency. After the year's suspension, the lab must re-apply for EPA approval.

Those moves followed similar enforcement activities against two other labs, Custom Engineering and Albert Mardikian Engineering.

Custom Engineering is in the midst of an EPA administrative review of its practices, while Mardikian pleaded guilty to criminal charges brought against him in U.S. District Court. Mardikian was to be senteneced last Monday, but that court appearance has been postponed until Nov. 4.

In response to FOI request by Chrysler

GM, Ford CAFE estimates listed

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—CAFE projections made by General Motors and Ford Motor Co. for the 1987-90 model years have been made public by NHTSA—along with the caveats by the two companies that guessing future sales is a very uncertain business.

The GM and Ford estimates became public in response to a Freedom of Information request by Chrysler Corp., whose own projections have also been added to the NHTSA docket.

GM expects a CAFE of 26.0 MPG for 1987 models, 28.0 MPG for 1988 models, 28.6 MPG for 1989 models and 29.0 MPG for 1990 models.

Ford uses a range for its projections: 26.0 to 27.3 MPG for 1987 models, 25.9 to 27.1 MPG for 1988 models, 26.2 to 27.6 MPG for 1989 models and 27.5 MPG for 1990 models.

Both companies have petitioned for a reduction of the CAFE standard from 27.5 MPG to 26.0 MPG for those model years. NHTSA, however, has proposed a reduction to 26 MPG for 1986 models and has not yet issued any proposal for future years.

The Automobile Importers of America, on behalf of its European members, has also asked for lower CAFEs for 1986 and later models. AIA membership does not include Mercedes-Benz of North America, which would also benefit from lower CAFEs although it has not made any request.

Ford said its estimated ranges do not reflect any limiting of production of models consumers want to buy, or "partial or complete outsourcing of full-size models outside the U.S. and Canada in order to transfer these Ford models from the domestic to the import CAFE for these model years."

Ford also said the lessening of the bottom of the range between 1987 and 1988 models is not that it is trying less but is "primarily a function of volume shifts caused by acceleration of certain new-model introduction dates."

Finally, said Donald Buist, Ford's director of auto emissions and fuel economy, the projections do not reflect "extraordinary marketing programs," not only because it is so hard to predict consumer and competitor response but also because some sales generated that way steal from future sales.

In a letter signed by James D. Johnston, industry-government relations vice president, GM described the forecast as "fragile" and said that if changed circumstances result in a reduction only half as large as the average variance per year experienced in the 1982-85 period, lowering CAFE for those future years to 26.0 MPG is justified.

GM noted that a full-line maker can be hurt two ways by lower fuel prices: Fewer small cars sold and more large cars bought. If gasoline prices continue to fall, then GM's projections are too high. Further, the GM scenario assumes a lowering of the dollar in foreign exchange markets, but if that does not occur, fuel prices will be lower than GM has estimated.

Other factors listed by GM as affecting CAFE projections include the strength of the U.S. economy, performance of new technology and extent of future import penetration.

Chrysler's future projections, now also in the docket are: 27.7 MPG for 1986 models, 28.6 MPG for for 1987 models; 29.1 MPG for 1988 models, 29.8 MPG for 1989 models and 30.9 for 1990 models.

Currently, for 1985 models, and with all companies adjusted for EPA test procedures, GM comes in at 25.5 MPG, Ford at 26.3 MPG and Chrysler at 27.9 MPG.

Honda and IRS reportedly settle 7-year dispute

TOKYO.—Honda Motor Co. reportedly has ended its seven-year dispute with the U.S. Internal Revenue Service over 1975 tax payments of its American subsidiary. It has dropped a suit against an IRS order for a penalty tax.

As a condition of the settlement, the IRS agreed to drop its 1978 penalty tax order against the auto maker, but Honda declined to reveal details of the agreement.

However, two other Japanese manufacturers, Nissan Motor Co. and Toyota Motor Corp., indicated that they would continue to fight similar IRS penalty taxes against their U.S. subsidiaries.

It is estimated that Nissan's penalty totals $500 million and Toyota's is in the neighborhood of $1 billion.

The IRS alleges that the three manufacturers set high prices for exports to their U.S. subsidiary sales units with the intention of narrowing their profits so that the subsidiaries would pay less in taxes to the IRS.

Sutherlin adds Toyota outlet

ST. PETERSBURG, Fla.—George Sutherlin, co-owner with his brother Jake Sutherlin, of Courtesy Toyota in Pinellas Park, has purchased Bill Brown Toyota and renamed it St. Pete Toyota.

The Sutherlins own several domestic and foreign-car dealerships in Florida, Alabama and California.

The two local Toyota dealerships are separate enterprises, said Harvey Albert, St. Pete Toyota's general manager.

Stock of Japanese makes rises to seven-month peak

Continued from Page 1

Colts and Mitsubishi all experienced sales declines, but also doubled or nearly doubled their unit counts. Sales were down and inventories were up—but not quite as much—for Spectrum and both Vistas.

Merkur escaped the general malaise affecting captive imports via incentives. Its sales rose and its inventory fell. Sales and inventories remained fairly constant—although poor—for the lame-duck Renault imports.

Toyota apparently has nothing left in most dealership showrooms (importers average upwards of eight days' worth of stock in transit alone); it reported a six-day supply of cars. Not surprisingly, its sales rate fell during the month because of shortages. Its inventory fell faster.

Like the car picture, the truck makers' days-supply figures were attributable largely to big increases in shipments. Both Isuzu and Chrysler Ram 50 sales fell, but both also doubled their stockpiles of trucks. Mitsubishi—beset by shortages until the strike ended—saw its sales fall by half and its stockpile nearly triple.

Adding cars and trucks together, there were 393,016 import vehicles in stock on Sept. 1, up from a month earlier (366,591) but down from two months earlier. On Sept. 1, 1984, the count was 259,865.

The vehicle stockpile equated to a 33-day supply at the start of this month, a four-month high. On Aug. 1, there was a 26-day supply of imported vehicles; on Sept. 1, 1984, there was 25 days' worth.

The car inventory was split this way at the beginning of this month: Japan, 65.02 percent; Germany, 25.61 percent, and other countries, 9.37 percent. One month earlier, the shares were: Japan, 58.22 percent; Germany, 29.35 percent, and other countries, 12.43 percent.

Japanese cars were, on average, good for 25 selling days. The Japanese makes and their days' supplies: Chevrolet, 128 (Sprint, 165; Spectrum, 114); Chrysler Corp., 119 (Dodge Colt, 139; Plymouth Colt, 135; Dodge Conquest, 99; Plymouth Conquest, 85; Dodge Vista, 82; Plymouth Vista, 81); Isuzu, 84; Mitsubishi, 50; Nissan (imports only), 33; Mazda, 21; Subaru, 20; Honda (imports only), 11, and Toyota, 6.

German cars had an average of 55 days' supply: VW (imports only), 62; Porsche, 61; Audi, 59; Merkur, 58; BMW, 49, and Mercedes-Benz, 42.

The average for the other European countries was 48 days' worth: Renault, 321; Peugeot, 70; Volvo, 39; Alfa Romeo, 37; Saab, 35, and Jaguar, 17.

Two weeks ahead of 1984 pace

Year's output passes 6 million

U.S. makers built their six-millionth car of the year last Friday (Sept. 20), two weeks ahead of 1984.

When the five-millionth car was built on July 30, the makers were also two weeks ahead of 1984.

Estimated auto production of 165,414 last week was up 5.73 percent from the previous week's 156,445.

Last week's output soared 51.11 percent over the year-ago week's 109,465. Strikes at several General Motors plants were responsible for last year's low total.

So far this year, 6,018,847 cars have been built, 4.70 percent more than the 5,748,573 that had been assembled last year at this point.

• Last week's estimated auto output was shared as follows: GM, 58.60 percent; Ford Motor Co., 18.68 percent; Chrysler Corp., 16.87 percent; American Motors Corp., 1.66 percent; Volkswagen of America, 1.29 percent; New United Motor Mfg., Inc., 1.15 percent; Honda of America Mfg. Co., 0.97 percent, and Nissan Motor Mfg. Co., U.S.A., 0.78 percent.

GM plants in Doraville, Ga., and Janesville, Wis., worked two overtime shifts on Saturday (Sept. 21.)

Ford's Lorain (O.) plant, which assembles Thunderbird and Cougar, was closed by a strike last week.

Ford has scheduled daily overtime this week at its plants in Chicago; Dearborn; Kansas City, and Wayne, Mich. Saturday (Sept. 28) overtime is scheduled at the Wayne plant.

Chrysler slated two overtime shifts Saturday (Sept. 21) at the Newark and St. Louis plants. The plants are scheduled for two nine-hour daily shifts this week. The Jefferson–(Detroit) plant is scheduled to operate two 8½-hour shifts this week.

Honda's production was lower than usual last week as the company wound up assembly of 1985 models. Full-scale production of 1986 models begins this week.

Israeli firm to build pilots of heavy-duty transmission

TEL AVIV, Israel.—A pact for production of at least eight pilot models of an energy-saving heavy-vehicle transmission has been finished between Industries Development Corp. (IDC), of Israel, and an Israeli manufacturer.

Research on the system, which incorporates a flywheel in conjunction with a continuously variable transmission, began some years ago at the Jerusalem-based Scientific Research Foundation.

The new transmission is said to save fuel by recouping much of the kinetic energy lost when brakes are applied and when the vehicle coasts downhill.

It also enables the engine to operate at its optimum speed most of the time, which the developer said enchances efficiency and reduces waste and emissions.

The new concept does not require investment in new production facilities and does not involve adoption of highly innovative and potentially costly production methods, according to the developer. It was reported that all the necessary components can be made using technologies long familiar to the automotive industry.

Tests reportedly conducted in the U.S. in cooperation with General Motors are said to have yielded fuel savings of around 30 percent. GM, which participated in development costs, has acquired a non-exclusive license to the new system.

Martinson's 25th

TIOGA, N.D.—Delford Martinson, owner of Tioga Motor Service, Inc., has received a 25-year-dealer award from Chevrolet.

Talks resume at Ford Lorain; layoffs spread

Ford Motor Co. and the UAW resumed bargaining late last week in an effort to settle the dispute that closed the Lorain (O.) assembly plant Sept. 9.

Also last week, Ford laid off about 550 UAW workers in the Detroit area, bringing to more than 7,000 the number idled by the Lorain strike.

The layoffs occurred at Ford's Chesterfield, Utica, Saline and Sheldon Road component plants. If the strike is not settled, Ford will lay off 1,100 more today (Sept. 23) at other plants.

On Sept. 9, Ford laid off 1,400 workers at its truck body plant in Avon Lake, O. At Lorain, 5,200 workers are idle.

The strike centers on health and safety issues.

Truck production holding steady at over 70,000

Domestic manufacturers estimated production of 71,884 trucks last week, about the same (up 0.05 percent) as the previous week's 71,846.

The past two weeks' production marked the first time since mid-June that output has risen over 70,000 units.

Last week's total was 36.94 percent more than the year-ago week's 52,494, when some General Motors plants were on strike.

So far this year, 2,509,313 trucks have been assembled, 10.19 percent more than the 2,277,344 built last year at this point.

Two Saturday (Sept. 21) overtime shifts were scheduled at GM plants in Janesville, Wis., and St. Louis.

Ford Motor Co. has scheduled daily overtime this week (Sept. 23) at its plants in Kansas City; Louisville; Wayne, Mich., and Norfolk. Saturday (Sept. 28) overtime is scheduled for the the Louisville plant.

At presstime, Ford's plant in Lorain, O., remained on strike over health and safety grievances. The strike began Sept. 9.

Chrysler Corp. scheduled two overtime shifts Saturday (Sept. 21) at its Warren (Mich.) plant. Two nine-hour daily shifts are scheduled this week at Warren.

Canada car output hot on the heels of '84 production

Scheduled output of 23,353 cars in Canada last week was down 5.97 percent from the previous week's 24,835 but 27.73 percent above the year-ago week's 18,283.

So far this year, 769,065 cars have been assembled, a pace that is now just 0.88 percent behind last year's 775,893 at this point.

Since mid-April, when year-to-date car production was 15.21 percent behind 1984's, the makers have been steadily catching up with last year's output.

Truck makers estimated production at 18,450 units last week, 1.22 percent more than the previous week's 18,228, and 3.47 percent better than the year-ago week's 17,831.

Ford's finest

Taurus in the wings

Five years in the development, the all-new, mid-sized, front-wheel-drive Ford Taurus debuts Dec. 26. Styling highlights include flush headlights, flush glass all around and wrap-around taillights. Story, other pictures are on Page 34.

Sleek Sable for Mercury

The all-new, mid-sized aerodynamically shaped Mercury Sable sedans and wagons will arrive in dealer showrooms Dec. 26. The car will have a 3.0-liter V-6 engine with multi-port fuel injection coupled to a wide-ratio four-speed automatic overdrive transaxle. Story, other pictures are on Page 36.

Popular package made standard

Standard on the 1986 Lincoln Mark VII is the comfort and convenience package, which was selected as an option by two out of three buyers last year. It includes power and instrumentation features, electronic AM/FM radio with cassette tape player and premium sound, keyless and illuminated entry system and interior amenities. The anti-lock brake system also is standard for 1986. Story, other pictures are on Page 31.

breaking news

Taurus-Sable intro now Dec. 26

DETROIT.—Ford Motor Co. has once again moved back the introduction date of its all-new Ford Taurus and Mercury Sable models. The new date is Dec. 26. The intro most recently was set for Nov. 14, the day General Motors is slated to introduce its new full-size and luxury cars. "They're not late, we promised to have them in the fourth quarter," said a Ford official. "We want to make sure we have the quality perfect."

Gloria shuts Ford Norfolk plant

NORFOLK.—Ford Motor Co. closed its light-truck assembly plant here Friday because of Hurricane Gloria, which struck the East Coast late last week. A Ford spokesman said the

Prices $350-$400 higher; no 7.7-pct. financing

Moving uphill into '86

By John K. Teahen Jr.
Managing Editor

The 1986 model year begins this week in the domestic auto industry, and there are some unpleasant surprises in store for showroom visitors.

No 7.7-percent financing. And higher prices.

General Motors and Ford Motor Co. have already announced percentage figures for their 1986 price hikes—3 percent for GM and 2.9 percent for Ford.

Both companies refused to divulge the dollar amount of inreases, but mathematics is a wonderful science. It enabled Automotive News to determine that GM's hike is about $400 and Ford's is about $350.

That's for comparably equipped models. On a straight sticker-to-sticker, before adjusting for equipment jockeying, the boosts are probably closer to 5 percent—about $650 for GM and $600 for Ford.

Chrysler Corp. hadn't priced its 1986 cars at presstime, but the company earlier announced a tentative increase averaging 2 to 3 percent. If Chrysler sticks to that plan, its bump will be $240 to $350, again on a comparably equipped basis.

No, Virginia, sticker shock is not dead.

While the low interest rates end on introduction day, there's a good chance that the domestic makers will have to sweeten the pot with new incentives early in the model year to move their higher-priced and virtually unchanged 1986 cars.

And the average hikes for GM and Ford are bound to climb even more. GM did not figure its newest models into its 3 percent boost. They are Buick LeSabre and Oldsmobile Delta 88 and four luxury lines: Buick Riviera and Oldsmobile Toronado and Cadillac Eldorado and Seville. They will be introduced in November.

Also still to be priced are the new Ford Taurus and Mercury Sable. They can be expected to raise Ford Motor's overall price level.

There are better tidings for imported-car shoppers. Except at Honda.

Honda has announced a price hike averaging $387, or 4.3 percent. Honda has an all-new Accord line for 1986 and has made other product changes (Automotive News, Sept. 23), and that figures into the boost.

Another reason, bordering on the irreverent, was suggested by a price analyst last week: Honda makes a lot of cars in the U.S., and perhaps it has become infected by the pricing policies of the domestic companies.

• Elsewhere among the top-selling imports, the hikes were less hurtful. On a comparably equipped basis, of course.

Toyota said its cars rose an average of $170, or 1.8 percent, and Nissan posted an average boost of $91, or one percent, on its Sentra, Pulsar, Stanza and Maxima lines. The range was $50 to $200. Nissan's average hike will be higher when the 200-SX and 300-ZX are tagged.

Volkswagen checked in with an average hike of $107, or one percent, on its U.S.-built and imported models. Base stickers climbed $175 to $300. Audi reported an average increase of $45, or 0.3 percent, after equipment alterations. Its cars went up $220 to $355 on a straight sticker comparison.

Also in the import field, Saabs rose $435 to $855 with equipment playing a part. Individual models jumped 3 percent to 5.7 percent.

At Mitsubishi, the bump was $70 to $330 on most cars. The Galant luxury sedan went up $470, and the Starion sports cars were reduced $30-$40.

Porsche reported no change for 1986 from its final 1985 prices, but Porsche boosted its 944 coupe $1,510 in March because of engine and suspension changes.

Auto industry unhurt by Mexican quakes

By Richard Johnson
and Dan McCosh
Automotive News Staff

Auto makers with manufacturing installations in Mexico reported last week that there was minimal damage to their facilities, little disruption of operations and no serious injuries to their personnel in the earthquakes which struck Mexico City.

"I can't foresee any severe economic impact on the industry as a result of these earthquakes," said a Ford spokesman in Dearborn.

William Pelfrey, an American Motors public relations official who flew to Mexico to learn the condition of relatives living near the destruction area, said none of the city's industrial zones was badly damaged.

"There was no disruption of production at any of the U.S. companies that I know of," he said. "The big question is the economy."

The Ford spokesman in Dearborn said Ford of Mexico plants are operating, and he reported no fatalities or serious injuries suffered by company workers as a result of the earthquakes.

Ford's six-story glass-and-concrete executive headquarters located in downtown Mexico City was in the vicinity of heavily damaged structures, but apparently was not damaged by the quakes. The headquarters building employs 500 persons, most of whom are Mexican nationals.

At the time of the disaster, about 30 Ford manufacturing executives from the U.S. were in Mexico City for meetings with suppliers concerning an assembly plant under construction in the northern city of Hermosillo. All were reported safe.

Ford employs about 3,000 hourly and salaried workers at a plant in Cuautitlan near Mexico City, where the company builds Mercury Topaz and Cougar, Ford Thunderbird and pickup trucks.

Elsewhere in the Mexico City area, Ford has a trim plant and a parts and accessories distribution

In negotiations at Chrysler

UAW zeroes in on outsourcing

By Mary Connelly
Detroit Reporter

The UAW last week demanded that Chrysler Corp. curtail the practice of using outside suppliers and halt the loss of "thousands" of jobs.

The UAW asked for a ban on outsourcing when Chrysler workers can demonstrate the job can be done within the corporation as efficiently and economically, said UAW Vice President Marc Stepp.

Calling the issue "one of the most important" in the current contract talks between Chrysler and the UAW, Stepp said that without a "fair conclusion on this subject, there probably will be some kind of confrontation."

"What good does it do to get a high pay raise if you lose your job," Stepp said at a press conference following resumption of bargaining last week.

• The Chrysler-UAW pact, covering approximately 70,000 hourly and salaried employes in the U.S., expires Oct. 15.

In seeking the limit on use of outside suppliers, Stepp said he wanted to return to the payroll Chrysler workers who granted economic concessions to the company. He estimated that some 3,300 Chrysler workers are laid off in Michigan.

The UAW also called for a moratorium on plant closings during the contract period which is expected to extend to 1987.

Chrysler Corp. had no comment on any of the UAW demands.

In an unusual move, Stepp, who is director of the UAW's Chrysler department and the union's chief negotiator, said he and Chrysler chief negotiator Thomas Miner will serve on the bargaining subcommittee dealing with outsourcing and subcontracting. Miner is vice president of industrial rela-

But some observers see a grim October

Sales set record 3rd time in row

By Jenny L. King
Detroit Reporter

Sept. 11-20 made it three in a row: Three consecutive record sales periods for the U.S. auto makers. The numbers were the result of record-low interest rates on new-car loans offered by most of the companies.

The message seems clear enough: U.S. consumers don't have anything against American-made autos . . . they're still suffering from a bad case of sticker shock.

Many industry observers are predicting a rather unpleasant payback period come October when the interest rates return to pre-sale levels and the new 1986 models appear in dealer showrooms with the traditional higher-than-last-year price tags.

This year's mid-September record sales of 289,582 included individual corporate records for General Motors and Ford Motor Co. The industry figure surpassed the previous record of 244,483, set in 1969, by 45,000 units.

The most recent total was up 32.32 percent from 218,847 reported a year ago. With nine selling days in the period both years, the daily rate of 32,176 was up the same 32.32 percent from the 24,316 average of Sept. 11-20, 1984.

Year-to-date sales were up 5.34 percent, to 6,218,218 from 5,903,005. They had been only slightly ahead of 1984 most of the year before dipping below the 1984 level during the first August period.

For Sept. 11-20, GM reported record sales of 157,219 new cars, up 32.11 percent from 119,008 the preceding year. Ford's record total of 83,451 was up 37.65 percent from 60,625. Chrysler Corp. made a 30.51-percent advance, to 36,874 from 28,253.

American Motors sales of 3,625 were down 15.50 percent from 4,290 last year, while Volkswagen handed in a report of 2,567 sales, up 36.47 percent. Honda slipped 27.58 percent, to 3,469 from 4,790. Nissan sales numbered 2,377.

Market-share shifts ranged from a fraction to more than a full point in the mid-September period. GM dipped to 54.29 percent from 54.38 percent last year. Ford climbed to 28.82 percent from 27.70 percent. Chrysler had 12.73 percent, down from 12.91 percent.

AMC slipped to 1.25 percent from 1.96 percent. VW edged up to 0.89 percent from 0.86 percent. Honda had 1.20 percent, down from 2.19 percent, and Nissan picked up the remaining 0.82 percent of the recent 10-day domestic market.

Cadillac and Pontiac notched sales records, with Pontiac up a whopping 70.31 percent and Cadillac up 8.27 percent. Chevrolet was up 14.92 percent, Oldsmobile was up 56.50 percent and Buick was up 19.76 percent.

At Chrysler Corp., Plymouth sales were up 29.53 percent, Dodge was up 29.51 percent and Chrysler was up 32.23 percent. Ford Division reported a 38.91-percent increase, Mercury was up 25.25 percent and Lincoln sales surged ahead 82.58 percent.

AMC Eagle sales, estimated at 400, were unchanged from 1984; Renault was down 17.10 percent; VW was up 36.47 percent; Honda was down 27.58 percent, and Nissan had no year-ago sales for sake of comparison.

Ford's Escort was the hottest selling nameplate in the mid-September period with 17,683 units to its credit. Oldsmobile Cutlass Ciera was second at 12,680, followed by Chevrolet Cavalier at 12,527, Ford Tempo at 12,253 and Chevrolet Celebrity at 12,038.

Buick City Job One

Buick City management and UAW officials celebrate completion of the first car at the new assembly complex in Flint. From left, they are: Herb Stone, vehicle program manager; Jim Hall, production manager of trim, chassis and final assembly; Phil Bigelow, Buick City employe; Don Spillman, chairman of UAW Local 599's shop committee; Bill Hutchinson, UAW shop committee member; Jack Wagner, UAW regional representative; Jack Robbins, Buick assistant general sales manager, and Leland E. Furse Jr., plant manager of Buick City.

Saturn location seen as helpful to UAW

By Mary Connelly
Detroit Reporter

The placement of General Motors' Saturn plant in Tennessee may speed UAW organizing efforts at Nissan's production plant in that state, UAW Vice President Donald Ephlin said last week.

Ephlin, head of the UAW's GM department, was the chief UAW negotiator for the innovative Saturn agreement with GM.

Nissan Motor Mfg. Corp., U.S.A., employs 3,000 workers at its Smyrna (Tenn.) plant. It began producing light trucks in June, 1983, and started assembling cars last April. GM announced in August that it would build Saturn in Spring Hill, Tenn.

"I think the fact that Saturn is in Tennessee will in some ways help speed up the organization (of Nissan)," Ephlin said during an informal and wide-ranging question-and-answer session with members of the Detroit Auto Writers Group last week.

Marvin T. Runyon, Nissan Motor Mfg. president, "had nobody to compete with down there," Ephlin said. "He screened employes very carefully and so he had a free ride for a while. But now he has to treat employes as well as GM will under Saturn, and I don't think he will."

"I think the thing which will work more than anything else, and which organized most auto workers, is speedup, pace and so forth," Ephlin said.

Nissan began producing Sentra passenger cars last April at Smyrna. Plans to accelerate annual output to 240,000 cars and trucks by the spring of 1987 required the start of a two-shift operation this year.

Ephlin also said that spillover effects from the GM-Toyota joint venture, New United Motor Mfg., Inc. (NUMMI), will aid future organizing efforts at non-union Japanese plants.

"When the other companies like Toyota demonstrate that they can live with the union and build high quality cars and get along with us and brag about it, I think that will have an impact," Ephlin said.

"I think we can demonstrate in the Saturn operation the positive role the union can play, which is important to future organizing.

"We've got to show they can have everything they've got at Nissan plus the advantages of a negotiated agreement that they decided on, that they can have some meaningful, real democracy at the plant," he said.

The Saturn memorandum of understanding, reached in July, 1985, made UAW workers salaried personnel for the first time in union history. It calls for one job classification for production workers and three to five for skilled trades workers, Ephlin said.

In addition, workers will receive quarterly payments which reflect the increases of other GM workers. They will also receive COLA increases, performance and attendance bonuses, profit sharing and

LeSabre production begins at Buick City

FLINT.—A dark blue 1986 front-wheel-drive Buick LeSabre was Job One at the Buick-Oldsmobile-Cadillac Group's Buick City plant here.

The assembly facility, reconstructed from what was formerly two Buick car assembly plants and a metal fabricating facility, will be accelerating production for up to one year. Full production is expected to be 75 units per hour, going from steel blanks to finished cars.

In the previous Buick assembly operation, bodies were made at the Fisher Body plant across town and trucked to Buick.

More than 4,500 employes are working the two shifts at the plant.

The assembly complex encompasses 1.6 million square feet of floor space. The facility has 22 dock locations for its just-in-time delivery system.

Robert C. Stempel, General Motors vice president and executive in charge of the BOC Group, said, "Buick City has been running pilot models for a couple of months and the quality level of these pre-production models has assured us that we can expect new quality standards as the cars are produced.

"This total operation represents a complete departure from traditional car assembly methods," Stempel said.

One of the most noticeable departures from traditional car assembly is a system called "synchronized production." With that procedure, Stempel said, if the schedule calls for 600 vehicles to be built on a shift, the required number of component parts will be built on that shift, thus eliminating storage of parts.

Stempel noted the importance of cooperation between UAW Local 599 and management at the plant. Citing an example of such cooperation, he said traditional methods of quality inspection have been eliminated. Instead of separate quality and reliability departments, each area will be responsible for its own quality.

Ford resolves recall of 516,000 Escorts, Lynxes

DEARBORN.—Ford Motor Co. has resolved a recall situation involving about 516,000 1982 and 1983 Escort and Lynx vehicles and has announced a recall involving 116 1985 stripped chassis vehicles.

Ford is sending owners of the Escorts and Lynxes two small clips designed to prevent twisting and binding of seat belts in the two rear seat-belt retractors.

The clips can be installed by owners, or can be taken to a Ford or Lincoln-Mercury dealership for installation. Ford had announced plans for this action earlier this year.

Separately, Ford is recalling 116 1985 stripped chassis vehicles equipped with certain 4.9-liter and 5.8-liter heavy-duty gasoline engines for installation of an emission maintenance warning light.

The light reminds owners to perform scheduled emission control equipment maintenance after 2,000 hours of operation (about 60,000 miles). Ford said without proper maintenance the EGR valve could become inoperative, resulting in unacceptable emission levels.

Federal regulations require that all 1985-model light-duty trucks and vehicles equipped with heavy-duty engines, which have a scheduled maintenance for the EGR system, be equipped with a system to alert the vehicle operator at the maintenance interval.

In virtually all areas of advanced technology

Europe, U.S. lag behind Japanese, study says

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A study being conducted for the Federation of American Scientists shows the U.S. and European auto industries are lagging well behind the Japanese in virtually all areas of advanced innovative technology.

Charts giving company and country progress in such areas as engines, transmissions, accessories, energy storage, etc., were submitted to the House Energy Conservation and Power Subcommittee during hearings on CAFE adjustments requested by General Motors, Ford Motor Co. and importers of most European luxury cars sold in the U.S.

Deborah Lynn Bleviss, the Bernard L. Schwartz Fellow in Energy and Environment at the federation, has spent eight months assessing the future for auto fuel economy here and abroad.

In short, said the Federation of American Scientists, higher fuel-economy standards may be the saving of the domestic auto industry however much it may oppose such action.

Bleviss' thesis is that the 1975 CAFE law pushed the domestic auto companies to develop fuel-efficient cars and have them available by the time consumers wanted to buy them, thus making the U.S. firms somewhat competitive with the Japanese.

She also asserted that the standards "took some of the uncertainty out of corporate planning that might otherwise have paralyzed the industry as it sought to anticipate the see-sawing oil market."

Further, she noted, CAFE provided a technology push that allowed the domestic firms to maintain a "state of the art" image when the Japanese auto makers were getting ahead in technology development.

But, she added, no matter what decision NHTSA makes on 1986 standards, the industry no longer enjoys certainty; the standards have reached a level of 27.5 or perhaps 26 MPG, and the industry is scrambling to assess "consumer demand" and to cover all bases—a costly guessing game that ties up resources that could be better used to develop new products.

That could mean that American

Alternatives sought to protectionist legislation

Trade debate grows more partisan

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The debate over the nation's trade policy became more partisan last week as President Reagan delivered a major trade speech and House Republicans began working on alternatives to more protectionist legislation being considered in both the House and Senate.

The Republican effort to put forth a trade initiative in line with proposals contained in the President's speech may diminish support for a Democrat-sponsored measure that threatens a 25 percent tariff on all goods imported from Japan, as well as other high-trade-surplus nations.

The President's speech outlining a new trade program was delivered a day after the U.S. and four other nations pledged to seek conditions that would lower the dollar against foreign currencies.

At week's end, the announcement, which included a pledge by the U.S. to intervene in financial markets, seemed to be moving the dollar lower. The willingness of the U.S. to intervene on behalf of the dollar represents a major switch in Administration policy. Up to now, the White House has called the strong dollar a sign of U.S. economic strength.

In his speech, the President said he would ask Congress for a $300 million "war chest" which could be used to provide up to $1 billion in mixed-credit loans to U.S. exporters.

Also, a federal "strike force" will be formed to uncover practices by foreign governments, the President said, and new ways to counter those practices will be formulated.

The President called on Labor Secretary William Brock to provide additional aid to workers laid off because of imports, and he said the Administration will seek to strengthen the General Agreement on Tariffs and Trade as well as the international monetary system.

Mr. Reagan's directions to Brock seem to signal the Administration's willingness to consider an extension of the trade adjustment assistance program. The program expires the end of this month.

"I will not stand by and watch American businesses fail because of unfair trading practices abroad," Mr. Reagan said in the speech. "I will not stand by and watch American workers lose their jobs because other nations do not play by the rules."

Nevertheless, the President said he would "strongly oppose and veto" protectionist bills that in his view would "cause loss of jobs and diminish international trade."

The White House also announced formation of a special President's Export Council to advise the President on international trade matters. Retired Ford Motor Co. Chairman Philip Caldwell was named to the body along with 11 others.

The Administration's moves were greeted favorably by House and Senate Republicans, but were largely dismissed by Democrats.

Senator John Danforth, Missouri Republican and a critic of the Administration's trade policy, called the speech "terrific." House Speaker Thomas P. O'Neill, Massachusetts Democrat, accused the President of "sounding an uncertain trumpet on trade." Mr. Reagan's words, he added, were "not the words of a man taking action, but of someone trying to stall for time."

Senate Majority Leader Robert Dole, Kansas Republican, said the President's speech was "a good signal" that he would work with Congress on an omnibus trade bill, but added that the President's remarks came too late to stop the progress of a highly protectionist trade bill for the textile industry.

Reaction on the part of the Big Three was muted. Ford Motor Co.

Heading for the U.S.

Nissan Motor Co.'s new Sunny will be exported to the U.S. for sale under the Sentra nameplate next spring and will be produced at the Smyrna (Tenn.) plant beginning in the summer of 1986. The Sunny, available in three models, features new styling, an upgraded interior and revised mechanicals, including a new part-time four-wheel-drive option controlled by a switch mounted on top of the gear lever.

Nissan plans to double Tennessee car output

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.— Nissan Motor Co. plans to double its annual production of automobiles at its Smyrna (Tenn.) plant from 60,000 units to 120,000. The increase, which will be gradual, will begin next year.

Production plans call for Nissan to build a remodeled Sentra 1,600-cc front-wheel-drive sedan. The new car, called Sunny here, was recently introduced in the Japanese market.

A Nissan spokesman said the company will ship 24,000 of the new cars a month to North America—23,200 to the U.S. and 800 to Canada. Shipments will begin next spring. Another 3,000 units a month will be exported to Europe beginning in the fall of 1986.

Nissan will add new production plant facilities at the Smyrna plant at a cost of $34 million.

With the increase, the production of cars will equal that of light trucks and raise the total annual output at the plant to 240,000 units by the spring of 1987.

However, Nissan noted that because of the flexible manufacturing features of the Smyrna plant, the company can easily adjust the truck-car output ratio to produce 240,000 cars alone to meet market demands.

When the expansion is completed, Nissan's U.S. production will trail that of Honda Motor Co., Ltd., with its 330,000 units annually at its Marysville (0.) plant, but will equal the output planned for the new Mazda Motor Corp. plant in Flat Rock, Mich.

AMC, Chinese begin Jeep Cherokee output

By Richard Johnson
Detroit Reporter

American Motors and its Chinese affiliate launched production in Beijing last week of a Jeep Cherokee model that may soon replace the aging CJ derivative the partners have been building.

Beijing Jeep Corp., a joint venture of AMC and China's Beijing Automotive Works, has been assembling an upgraded version of the four-wheel-drive BJ212, a 30-year-old, five-passenger CJ-offshoot of Russian design. But plans call for the partners to eventually turn out nothing but vehicles based on Jeep platforms and engineering.

At ceremonies in China last week, AMC Executive Vice President Joseph Cappy said Cherokee production "marks the first time a U.S.-designed, state-of-the-art, world-class vehicle has ever been built in China."

Beijing Jeep, which currently employs around 4,000 people, will build 750 Cherokees at the Beijing plant during the remainder of 1985 and produce 4,500 units next year. The vehicles will be distributed domestically, but in future years Cherokees may be exported to other Far Eastern markets.

AMC has a 31.4 percent interest in Beijing Jeep, which was established in May, 1983, as the first automotive venture between China and a foreign partner. By reinvesting profits, AMC is expected to eventually hold 49 percent ownership.

Cappy said the decision to assemble Cherokee kits in China is a testament to "the ability of our Chinese workforce and the confidence the joint venture has generated on both sides of the Pacific."

Earlier plans called for production of a new-generation BJ213, built around a CJ platform. But AMC President Jose Dedeurwaerder told Automotive News several weeks ago that the effort to design a new CJ-like vehicle to Chinese specifications led to what was fundamentally a four-door CJ. Instead of building an all-new vehicle, AMC suggested assembling the XJ (Cherokee) in China.

Dedeurwaerder predicted that if

His critics aren't happy, either

DeLorean slaps federal charges

By Edward Lapham
Marketing Editor

"Of course."

That's what former auto maker John Z. DeLorean said when Today Show host Bryant Gumbel asked him if he would plead innocent to federal racketeering, tax evasion and fraud charges. He will be arraigned on the charges in Federal District Court in Detroit.

DeLorean, who was on Today three days last week to launch a national book tour for his autobiography, DeLorean, blasted the Federal Government.

The former auto maker criticized everything from the timing of the Detroit indictment to the racial composition of the grand jury, which included only one black citizen.

He claimed the indictments were timed to adversely affect sales of his book and that the entire Detroit-based federal probe was a result of the government's humiliation when he was acquitted of all federal drug-trafficking charges in Los Angeles in August, 1984.

This time, DeLorean said, the government has called on a score of accounts and again is spending "millions and millions of dollars" in an attempt to wrongly convict him.

• Maintaining his complete innocence, he said that in his 60 years he has never been charged with so much as "spitting on the sidewalk."

DeLorean also said the grand jury probe "in its third year," didn't come up with anything "they didn't know three years ago."

On that point, at least, many of DeLorean's critics seemed to agree with him. In fact, there was some fairly harsh criticism of the government last week by those who for some time have closely followed the matter of the $17.65 million which disappeared from the sports-car project.

DeLorean was charged with converting about $8.5 million for his own use by pulling the money through a maze of European banks and offshore shell corporations. That leaves about $8.9 million still missing and unaccounted for.

The criticisms were twofold. There was disbelief that no other individuals were named in the indictments, and there was dismay that no mention was made of the whereabouts of the missing $8.9 million.

"I can't believe that John pulled this off by himself," said one critic familiar with the case.

"I am outraged by the fact that the grand jury didn't indict more than just John DeLorean.

"I also think that it leaves everybody with a bitter taste that the government walked away satified when they found less than half the money," he said.

"I just can't believe that they're

Mazda's new RX-7

Mazda Motor Corp.'s redesigned Savanna RX-7 features a refined rotary engine with an advanced turbocharger complemented by an intercooler. The car, which goes on sale in Japan Oct. 8, also has a new rear independent suspension system. It is equipped with four-wheel ventilated disk brakes and rack and pinion steering. Automatic adjustable shocks, a new type of power steering and an anti-lock braking system are available on some models.

50 states proclaim Oct. Car Care Month

DETROIT.—For the first time, governors of all 50 states have proclaimed October as Car Care Month, expressing their "strong desire for safer cars, cleaner and healthier environment and the conservation of energy resources."

"When this program began in 1981, there were only nine gubernatorial proclamations," said Jim Fournier, chairman of Car Care Council, which coordinates the annual campaign. "Having the support of all 50 governors is evidence of the growing concern for auto neglect, and can have a great impact on inducing motorists to respond to our message."

Dana aiming to be biggest axle supplier

By Joseph Bohn
Truck Editor

ANAHEIM, Calif.—Dana Corp. is taking a hard run at being the largest heavy-truck axle producer, and officials announced additional plans to achieve that goal at the International Trucking Show.

Dana entered the heavy-truck axle business in 1979, shipping 500 units that year worth $3 million in sales.

Gus Franklin, vice president and general manager of the Spicer Heavy Axle Division, is forecasting shipment of 200,000 heavy front and rear axles in 1986 which, he said, would have a value of more than $300 million.

The division's rapid growth to the second-largest Class 6, 7 and 8 axle supplier was achieved largely through "market acquisitions and absorbing of those acquisitions," Franklin said.

(Rockwell is the largest supplier of heavy-truck axles.)

Dana has launched a Project 90 series of automation and other efficiency/quality improvements, of which the axle division is a part, to become a global low-cost producer by 1990.

Officials say it is the biggest capital investment program ever undertaken by the company.

A recently completed 230,000-square-foot axle plant in Lancaster, Pa., is part of its updated assembly and automation efforts.

At the truck show, Spicer Heavy Axle also introduced new 38,000-pound and 44,000-pound tandem models for the Class 8 market and a new 21,000-pound axle for the Class 6 and 7 market.

According to Ken Carter, marketing-sales manager, the new 21,000-pound axle is available in single and two-speed designs and is geared to giving fleets and dealers in the trucking industry more flexibility in specing.

Another advantage of the axle is a lower federal excise tax on trucks by keeping GVW ratings at or below the 33,000-pound limit.

Spicer also announced that precision-forged differential gears have been incorporated into all Spicer heavy-truck rear-axle models, ranging from 13,500 to 46,000-pound ratings.

The forged gears were described as more durable and cost effective than conventional cut gears, which are more commonly used in the industry.

Technically, precision forged gears are 30 percent stronger than conventional cut gears, Spicer said. This results in a differential better able to withstand the shock loads generated by modern trucks, the company said.

Power to please

On its 1986 4WD line, Toyota has added an independent front suspension to all models and has made a gasoline turbo engine available on its base 4x4 model and the 4Runner sport/utility vehicle.

Registrations chalk up record for 7 months

Truck registrations maintained their record stride during the first seven months of 1985, topping last year's previous high by 16.7 percent.

Regstrations were up in all light, medium and heavy-duty segments. Heavy truck registrations were up 19.7 percent, according to R.L. Polk & Co.

The industry registered 2,693,960 trucks, up from 2,307,582 in the seven-month year-earlier period.

Light-truck, Class 1-3, registrations of 2,531,748 were up from 2,174,290 for seven months last year.

Within the light segment, Class 1 registrations of 1,741,690 were up from 1,236,353 in 1984.

Class 2 registrations of 768,461 were off from 915,242 a year ago, and Class 3 registrations of 21,597 also were off from 22,695 a year earlier.

Generally, the declines within particular segments reflect market shifts.

The increasing availability of new Japanese and European products has given buyers a wider choice within individual segments, causing them to change their traditional buying habits in many cases.

This is as true of the medium and heavy-truck segments as it is of the light-duty segment.

The medium Class 4-6 group registered 35,084 trucks, up from 27,126 a year ago.

There were 543 trucks registered in Class 4, up from 404 a year earlier.

Class 5 registrations totaled 4,023, up from 1,268 a year ago, and Class 6 registered 30,518, up from 25,454 last year.

In the heavy Class 7-8 segment, International displaced Ford as the industry leader, regaining the position it held last year.

IH's market share, along with GMC's, Kenworth's and Peterbilt's, is still off from a year earlier, while Ford and Mack continue to hold onto gains in the segment.

Analysts feel that Kenworth particularly has suffered from a

Roomier Mazda

The 1986 Mazda B2000 Cab Plus pickup is available in SE-5 and LX trim levels (shown above). The added room allows two jump seats or extra storage behind the front seats.

Mazda '86 line offers new Cab Plus model

LOS ANGELES.—Mazda has broadened its compact pickup line with a new B2000 Cab Plus model for 1986.

It has the same overall exterior dimensions as the 1986 long-bed model but has a larger passenger-car-like interior. With a cabin 17.7 inches longer than that of the standard model, the Cab Plus offers space behind the seat for two jump seats or extra storage.

Accented by an integrated front bumper/front skirt design, quarter side windows and slanted nose and hood surfaces that merge into a 53-degree windshield rake, the new model offers sporty styling.

The B2000 Cab Plus is powered by a 2.0-liter single overhead camshaft gasoline engine derived from the Mazda 626 power plant. The engine produces 80 HP at 4,500 RPM and 110 pounds-feet of torque at 2,500 RPM.

The independent front suspension is a double wishbone type that incorporates an I-shaped lower arm with tension rod and torsion bar. Special suspension bushings increase longitudinal compliance to improve ride comfort while still maintaining good handling.

Mazda said shear-type cab mounts have twice the vertical compliance and lateral rigidity of conventional compression-type mounts, providing good riding comfort and quietness.

At the rear, trapezoidal spring shackles provide lateral control compliance. The bias-mounted rear shock absorbers act to prevent axle windup under hard acceleration.

The Cab Plus is available in four trim levels—standard, SE-5, LX and LX with Convenience Package.

The standard Cab Plus is priced at $6,895, the SE-5 at $7,295. The LX, with its higher level of comfort and trim features, is priced at $7,895, and the fully loaded LX with Convenience Package is priced at $8,545.

Standard features on all trucks include full carpeting, tinted glass, intermittent windshield wipers, radial tires, locking fuel-filler door and bright windshield and drip rail moldings.

The SE-5 package includes black-painted rear step bumper, body stripes, cut-pile carpeting and dual sport door mirrors.

The LX offers chrome-plated spoker wheels, front bumper with chrome molding, pin stripes, tachometer, AM/FM/stereo radio, reclining bucket seats with lumbar support for the driver, digital quartz clock and center console box.

The Convenience Package adds halogen headlamps, rear sliding window, AM/FM/stereo with cassette and four speakers, cruise control and tilt steering wheel.

truck industry news

Chrysler planning to fill truck niches with '87 products

By Joseph Bohn
Truck Editor

CHELSEA, Mich.—Chrysler Corp. is trying to expand its coverage of the truck market, and some of the things it is working on for 1987 or later include:

1. New stretched versions of Caravan/Voyager, with higher-displacement engines as options.
2. The new line of Dakota pickups which will give Dodge three sizes of trucks.
3. An engine with higher displacement than the 360-CID V-8, which will expand applications in the commercial segment.
4. 4WD vans and wagons.

At a press briefing at its proving grounds here, Pat Keegan, general manager, Chrysler Truck Operations, said the company is looking seriously at stretched versions of its Caravan/Voyager and Mini Ram Van.

Company sources subsequently confirmed the approximately one-foot-longer versions would be offered as 1987½ models, together with the new V-6 engine Chrysler will import from Mitsubishi.

The stretched compacts will increase cargo-carrying capacity of seven-passenger models, which has been a problem, and also will increase interior legroom.

"It's enough to give you a nice cargo version with more cube (cubic feet)," Keegan added.

Commercial applications of the T-115 have been "virtually untapped" so far, Keegan said. "Frankly, people have been buying them so quickly with seats and windows, we haven't done a lot of concentration on the cargo van," he said.

It is a possible additional outlet, though, should van competition heat up and sales become more difficult to come by. It is also a market Chrysler will have to pursue if it adds a second assembly plant for compact vans.

Company insiders say the second-plant decision will have to be made within about six months.

Chrysler plans to drop its rear-drive Diplomat/Gran Fury/Fifth Avenue in the 1988 model year, replacing them with a new C-body line. The idea, if approved, would be to source the new C-body at another plant, and move second-sourcing for vans into the St. Louis plant where the full-sized rear-drive cars now are built.

Chrysler is expected to import about 450,000-500,000 Mitsubishi V-6s by 1988 for both its compact vans and the new C-bodies.

Keegan said the T-115 is drawing a heavier mix of trade-ins of two-door and four-door cars, but fewer trade-ins of station wagons

IH, Nissan ink deal for medium cabovers

CHICAGO.—International Harvester finally signed its agreement with Nissan Diesel Motor Co., Ltd., Tokyo, for a new generation of Nissan-built cabover medium trucks to be marketed by IH.

Automotive News previously reported negotiations between the two companies and that a deal was imminent (Sept. 16).

All of IH's approximately 850 dealers in North America are franchised to market the new Class 6-7 models which will display the International nameplate. Deliveries to customers will begin in early 1986.

IH dealers will be responsible for parts and service for the new cabover models, and IH's parts distribution system will be the source for all parts requirements.

Nissan Diesel will initially supply IH with two models of cabover medium trucks.

Those competitively priced models will provide maneuverability and visibility for many city applications like beverage distribution, refuse collection and pick-up and delivery.

As previously reported, Nissan plans to eventually export up to 3,000 units yearly to IH, equal to 15 percent of Nissan Diesel's entire 1984 truck output.

Neil A. Springer, president and chief operating officer of IH, said the new models will enable IH to maintain its full medium and heavy-duty truck product line with competitive technology and low cost of ownership.

• Because cabover models account for only about 12 percent of industry demand for medium trucks, it was not economically prudent for IH to design, engineer and tool up for this limited-potential segment, Springer said.

The IH president added that the new models will not affect the manufacturing or marketing of

THE ADVANTAGE

Forget everything you know about Extended Service Contracts.

Now there's The Advantage™ from Western Diversified.

This could be the most important ad that you read today. The Advantage and The Advantage Plus extended service contract from Western Diversified is the finest product on the market, and that translates into one word for you: PROFITS.

For your customers. With The Advantage, you are providing your customers with a no-hassle, comprehensive extended service contract that allows them to enjoy their new or used car "worry-free."

For your dealership. The Advantage allows you to achieve maximum profits, the greatest customer satisfaction, with no personal liability.

Western Diversified has been in the Finance and Insurance business over 22 years. They have a commitment to their dealers that has been proven over the test of time. Western Diversified is around for the duration, committed to higher profits for their dealers through better programs. The Advantage and The Advantage Plus extended service contracts are yet another of the quality programs brought to you by Western Diversified. Call us for details, TODAY.

optional on all other front-wheel-drive passenger cars except the Omni and Horizon.

He said the 2.5L is a derivative of the 2.2L, but has received added features that also have been given to the 2.2L. For example, the air cleaner is easier to get to and has a more attractive appearance. It helps reduce induction noise and the top comes off by hand for checking and cleaning.

All the 2.2L engines, except those in Omni/Horizon, have a new cylinder cover which makes the positive crankcase ventilation system more efficient and gets rid of an ugly little box the PVC hung in behind the engine, he said.

"It makes the whole system significantly quieter," Bollman said.

There also is a new timing-belt cover. Its top portion can come off for service or repair without disturbing any of the alternator or air-conditioning bracketry, Bollman said.

"Just three screws hold it on and it slides off," Bollman said. "There also have been improvements made to the top cover itself to help keep out sand, gravel and snow."

The company has added two new on-board diagnostic codes for its electronic fuel-injection and turbo engines for 1986.

The first indicates an engine running too cool, a condition that might be caused by something like a thermostat stuck in the open position. Too cool an engine sets a flag inside the on-board diagnostics of the logic module, he said.

The second is a throttle-body temperature sensor. It senses a hot inlet and will adjust the duty cycle of the injector to clear the engine when it's hot and bring better driveability, Bollman said.

Both conditions now have trouble codes that go into the logic module. Neither one causes a default or limp-home mode or turns on an instrument panel warning light, he said.

"That allows the mechanic to reach into the box where that number is stored in memory and trigger it and read it out," he said.

Bollman said his company is paying a great deal of attention to under-hood appearance.

"Park a 1980 K-car with its carburetor next to a 1986 with direct-fuel injection and compare the two in cosmetics. We've come far.

"When Omni/Horizon bowed in 1978, one of our designers said, 'My God, what have we done? With all of those wires, cables, hoses, tubes and everything under the hood—some of them unretained and not clipped at all—it looks like an explosion in a spaghetti factory.'

"From that point on we were driven by under-hood cosmetics," Bollman said.

"We use cosmetics because an uncluttered under-the-hood invites repair, invites someone to take a look and looks less confusing," he said.

Trucks chalk up 7-month record for registrations

Continued from Page 14

general falloff in the owner-operator buying segment of the market.

Fleet sales have softened in the past couple of months, but they have not dropped as much as sales to individual purchasers.

Overall, heavy-duty manufacturers registered 127,128 Class 7-8 trucks, up from 106,166 a year earlier, Polk figures show.

There were 45,164 trucks registered in Class 7, up from 36,386, while Class 8 registrations numbered 81,964, up from 69,780 in the year-earlier period.

290,738 for July; 30.63 pct. of U.S. market

Import registrations highest ever

By Jenny L. King
Detroit Reporter

With the domestic sales pace slowing in July and imports continuing to grow, the registration book showed a dramatic gain in market share for imports.

Imports not only notched an any-month numbers record in July, they passed the 30-percent mark for the first time in almost two years. According to figures reported by R.L. Polk & Co., new import registrations of 290,738 in July accounted for 30.63 percent of the market.

The total was up 29.73 percent from 224,103 a year earlier. At that time, the domestic market was considerably stronger, keeping imported cars to only 24.81 percent of the market.

July saw Nissan, Toyota and Honda locked in the usual struggle for first place among the imports. This time, Nissan captured the crown with registrations of 60,707 new passenger cars and 20.88 percent of the import total. Nissan gained 1.25 percentage points year to year, rising from 19.68 percent based on 43,996 registrations a year earlier.

Second-place Toyota had 20.28 percent of the total, down 1.61 percentage points from 21.89 percent in July, 1984. Honda, which includes both imported and U.S.-built cars, was third with 17.68 percent, down 0.66 percentage points from 18.34 percent.

Volkswagen was fourth, considerably behind the three leaders. VW registrations rose 28 percent, but its market share dipped slightly. Like Honda, VW numbers include U.S.-built cars. The other German imports, BMW, Mercedes-Benz and Audi, all improved their lots July to July.

Ten imports captured 88.17 percent of the market; a year ago they held 89.75 percent.

At the end of seven months, it was Honda in first place among imports with 313,088 registrations and 19.56 percent of the import market. Toyota, with 19.12 percent, was nudged into second place, followed closely by Nissan.

While each of the top 10 imports was up in numbers from 1984, only Mercedes-Benz and BMW increased their shares of the market, 0.07 percentage points and 0.23 percentage points, respectively.

Seven-month import registrations of 1,600,549 were up 12.51 percent from 1,422,531 in 1984. Their share of the total market grew to 25.78 percent from 24.03 percent.

Japanese imported cars accounted for 72.08 percent of the July, 1985, import market, down a percentage point from 73.08 percent in 1984. West German products were up to 13.63 percent from 11.29 percent, while the U.S. segment eased off to 7.87 percent from 8.01 percent. Numbers of cars by countries of origin were:

	July, 1985	July, 1984
Japan	209,557	163,779
W. Germany	39,632	25,312
United States	22,870	17,944
Sweden	14,371	12,431
France	1,846	2,588
Great Britain	1,823	1,399
Italy	639	628
Ireland	0	22
TOTAL	290,738	224,103

Year-to-date import registrations were 70.28 percent Japanese, 14.08 percent German, 8.57 percent U.S. and 5.21 percent Swedish, with the remaining 1.86 percent belonging to British, French and Italian products. A year earlier, the Japanese portion was 70.64 percent, the German share of 13.38 percent, U.S. cars represented 8.10 percent and Swedish Volvos and Saabs had 5.62 percent.

The country-by-country breakout was as follows:

	7 Mos., 1985	7Mos. 1984
Japan	1,124,861	1,004,930
W. Germany	225,282	190,291
United States	137,224	115,224
Sweden	83,354	79,879
France	14,277	18,155
Great Britain	11,368	10,310
Italy	4,183	3,499
Ireland	0	243
TOTAL	1,600,549	1,422,531

Imported truck registrations in July were up 35.12 percent from the preceding year, to 88,048 from 65,165. Top-selling Toyota easily outdistanced second-place Nissan, with Mazda third and Isuzu fourth, replacing Dodge Ram 50. Their numbers were:

	July, 1985	July, 1984
Toyota	36,318	25,394
Nissan	22,821	17,339
Mazda	11,020	8,994
Isuzu	6,730	3,380
Dodge Ram 50	—	4,327
Others	11,159	5,731
TOTAL	88,048	65,165

Year-to-date truck registrations, through July, were up 32.38 percent from 1984, to 540,337 from 408,156. Again, it was Toyota on top, followed by Nissan and Mazda. Isuzu took fourth place from Dodge. The totals were as follows:

	7 Mos., 1985	7 Mos., 1984
Toyota	206,810	151,395
Nissan	151,102	115,841
Mazda	62,278	65,186
Isuzu	41,225	22,880

Ford sponsors exhibition of 500 years of British art

WASHINGTON.—Ford Motor Co. will join the National Gallery of Art in bringing to Washington The Treasure Houses of Britain: Five Hundred Years of Private Patronage and Art Collecting. The exhibit is slated for Nov. 3-March 16.

More than 700 historic works of art, many of them never before seen in public, will make this the greatest single exhibition of British treasures ever displayed outside the U.K., according to the National Gallery.

The exhibition will be presented in chronological order, commencing with a Tudor/Elizabethan room; moving through the Jacobean era; reviewing the Palladian style; presenting rare collections of paintings and porcelain, and reflecting the monumental scale and sense of balance which characterize the English country house.

"One cannot help but be impressed by the perseverance and dedication of the generations of owners of the British country houses who built their art collections so painstakingly over a 500-year period," said Ford Chairman Donald Petersen.

Northwood auto show scheduled Oct. 11-13

MIDLAND, Mich.—The 22nd annual Northwood Students' Automotive Industry Show will be held Oct. 11-13 on the campus of Northwood Institute.

The show is unique in that it takes place outdoors in a flamboyant autumn setting.

Marketing & Media

Continued from Page 22

and Connecticut, won the 1985 Cadillac Laurel Award in the television category for a commercial budgeted at more than $1 million.

The commercial was created and produced by ad agency Avrett, Free & Ginsberg, which won the account a year ago.

The winning campaign featured spokesman Tim McCarver, a former baseball star and currently color announcer for New York Mets telecasts. It had a media budget in excess of $2 million and was timed for the 1985-model launch of the new C-cars.

H&M selected

General Tire has chosen Ohio-based ad agency Hesselbart & Mitten as its new agency of record.

H&M replaces D'Arcy Masius Benton & Bowles.

Hesselbart & Mitten will handle electronic and print media as well as collateral support and sales promotional activies, General Tire said.

Contests

The ninth annual NADA/Radio Advertising Bureau awards competition is open for entries.

There are three market categories—population less than 100,000, 100,000 to 500,000 and over 500,000. Individual dealers, their ad agencies or local radio stations are eligible to submit one entry per dealer. The entry deadline is Nov. 29. The spots must have aired between Oct. 1, 1984, and Oct. 1, 1985.

For the first time, dealer association commercials will be eligible to compete. They will compete against each other in a separate judging category.

A call for entries also has been issued for the 15th annual NoRMA Awards, sponsored by the Newspaper Advertising Bureau and the National Retail Merchants Assn.

Any merchandise or institutional ad carried in a daily newspaper between Nov. 1, 1984, and Oct. 31, 1985, is eligible. Nov. 4 is the entry deadline.

AMC assigns Renault account to Jeep agency

DETROIT.—American Motors has ended weeks of speculation and rumor by selecting ad agency Saatchi & Saatchi, Compton to handle its Renault account in addition to the Jeep account. The AMC Eagle car is part of the Jeep account.

In addition to preparing advertising, the agency will also have an expanded role in certain marketing, merchandising and sales promotion programs.

Grey Advertising, which had handled AMC's car account since replacing Cunningham & Walsh in 1978, lost the Renault account in favor of Compton. Saatchi & Saatchi, Compton has handled the Jeep account since 1964.

AMC said the account consolidation was made to "maximize the efficiency" of its marketing dollars.

"This consolidation makes possible a new kind of relationship in which the agency will become much more deeply involved in American Motors operations," said Joseph E. Cappy, executive vice president—operations.

"Saatchi & Saatchi, Compton will become our full marketing partner and assume an active role in all marketing and planning areas," he said.

Grey will remain agency of record for the car account until Dec. 31, although the "transitional" period already has started, AMC said.

120-second spot airs

Tom Williams Buick, Birmingham, Ala., is bucking the trend. While TV commercials get shorter and shorter, including a fairly good sampling of 15-second spots, Williams has aired 120-second commercials.

The spots, prepared by The Wright Edge, began airing in mid-September on local network affiliates and several cable networks through the local cable service to announce the arrival of the first of the 1986 Buicks.

"We see the need to take more time to present the facts necesary to help viewers make the decision to buy," said H. Wright Chapman, president of the ad agency.

New businesses

Detroit Tigers pitcher Milt Wilcox has opened a Detroit-based PR agency, **Milt Wilcox & Associates**, "to supply professional athletes for autograph sessions, personal appearances, banquets, grand openings and other endeavors." The new agency also hopes to place athletes in print ads plus radio and TV commericals.

James M. Kendrick, former communications vice president at Tenneco Automotive, has opened **Kendrick Communications Services** in Chicago. His first two clients are Tenneco and Exide Corp.

In Philadelphia, **LindaStrauss Enterprises** has been formed as a "full-scale marketing consulting agency." Linda Strauss has spent 10 years in automobile advertising.

Former Campbell-Ewald PR specialist Bob Norwood has hung out his shingle as **Robert L. Norwood & Associates** in Detroit. Norwood has extensive experience in broadcast and print media as well as public relations.

Personnel

Toyota Motor Sales U.S.A. has named **George Borst** corporate marketing manager with responsibility for marketing merchandising and advertising.

Toyota also named **Charles Valentine** national ad manager. Borst joined Toyota from Chevrolet, and Valentine formerly was with McCann-Erickson.

Dancer Fitzgerald Sample has assigned senior vice president **John Hirschboeck** to DFS/Australia as managing director of the Toyota accounts there.

DFS senior vice president **Joe Cronin** has replaced Hirschboeck as management supervisor on the national Toyota Motor Sales account.

Duane E. Poole has been named PR director for General Motors' Warehousing and Distribution Division. He had been assistant director of civic affairs for the Chevrolet-Pontiac-Canada Group.

Andrew L. Schupack has been named a senior account executive for PR firm Creamer Dickson Basford. He had been a senior account executive at PR agency Hill & Knowlton's Los Angeles office.

Marcie Hill, K&E/Detroit, has been named a senior vice president. Hill, associate media director, is responsible for Chrysler-Plymouth and corporate network and cable TV buys.

Setting it straight

Captions on these two pictures were inadvertently swapped in last week's Recreation on Wheels page. Correct identification is as follows: Above is Toyota's LE Pasenger Van for 1986, featuring a new 2.2-liter, 105-HP engine. Below is a Jayco Van Conversions unit. Jayco offers a choice of six window arrangements and five floorplans in Series 5000 and 7000 models.

Evansville auction offers odometer guarantee

EVANSVILLE, Ind.—Evansville Auto Auction, Inc., is providing dealers with an odometer guarantee.

Evansville said its odometer policy "is needed to give our buying dealers the confidence that the vehicles they are buying are showing the honest mileage."

For visiting VIPs

American Custom Coachworks, Ltd., Beverly Hills, Calif., custom-built this limousine for the Frontier Hotel and Casino in Las Vegas. The limo, to be used to shuttle VIPs, is a Lincoln Town Car stretched 56 inches. It features a bar, TV, VHS, telephone, dual air conditioning and heating systems, dark windows and hors d'oeuvre compartment, the company said.

Five dealers break ground for Stockton Auto Center

STOCKTON, Calif.—Ground has been broken for Stockton Auto Center, a 75-acre planned real estate development designed for automotive sales.

The five first auto dealers for the center are: E.J. (Woody) Woods, Stockton Datsun; Paul Umdenstock, Big Valley Ford; Jay Friedman, Valley Volkswagen; John Schiavo, Pacific Valley Motors, and Bob Byington, Stockton Dodge.

The center is scheduled to be completed in January, 1986. Plans call for other dealers to join the five original dealerships.

The center will have large, landscaped common areas, test tracks, a financing center, a children's play area and a recreation hall.

The center will also include support businesses such as auto parts stores, muffler shops and insurance agencies.

The auto center project came into being last November, when the five dealers, through a citywide election, altered a growth-limitation law to include the 75-acre complex.

COX Communications, Inc.

For first time in 13 weeks

Car output climbs above 170,000

Since the end of June, auto production has been below the 170,000 mark, due mainly to model changeover and vacations. But last week's estimated output climbed to normal levels.

Last week's expected production of 173,592 cars was up 9.80 percent from the previous week's 158,101.

Last week's output was 6.10 percent more than the year-ago week's 163,616.

So far this year, 6,185,126 cars have been assembled, 5.15 percent more than the 5,882,303 completed at this point last year.

Last week's estimated auto output was shared as follows: General Motors, 58.21 percent; Ford Motor Co., 19.47 percent; Chrysler Corp., 16.59 percent; American Motors, 1.58 percent; Volkswagen of America, 1.35 percent; New United Motor Mfg., Inc., 1.09 percent; Honda of America Mfg. Co., 0.97 percent, and Nissan Motor Mfg. Co., U.S.A., 0.74 percent.

GM plants in Pontiac (G-cars); Detroit; Janesville, Wis.; Lordstown, O.; Wentzville, Mo.; Detroit-Hamtramck, and Lansing (Nos. 1 and 2) worked two overtime shifts on Saturday (Sept. 28).

Ford has scheduled daily overtime this week (Sept. 30) at its plants in Chicago; Dearborn; Edison, N.J.; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Saturday (Oct.7) overtime is slated at Ford plants in Chicago, Dearborn and Lorain.

Chrysler employes worked Saturday (Sept. 28) overtime at the Jefferson (Detroit) and Newark (Del.) plants.

Daily overtime is scheduled this week at Chrysler's Newark and St. Louis (Nos. 1 and 2) plants.

Ford's Lorain plant resumed production last Monday (Sept. 23) after settlement of a two-week strike over health and safety grievances. The plant assembles Thunderbird and Cougar.

Emissions tests to begin in 3 Detroit-area counties

Motorists in the Detroit metropolitan area will begin receiving notification this fall of a new auto exhaust testing program being established to bring the region into compliance with federal air pollution laws.

Most cars and light trucks in the southeastern Michigan counties of Wayne, Oakland and Macomb will be tested annually for exhaust pollution under the program. After Jan. 1, 1986, proof of testing will be required before license plates or tabs are issued by the Michigan Secretary of State's office.

Approximately 1.9 million of the 2.4 million cars and light trucks registered to addresses in the region will be tested annually. About 20 percent are expected to fail the tailpipe test, but owners of those vehicles will not be required to pay more than $63 toward necessary repairs.

However, if emissions control equipment has been tampered with, the motorist will be responsible for correcting the tampering, regardless of cost, if it is needed to pass the test.

Southeastern Michigan must implement tests because the region did not meet federal air quality standards by a 1982 deadline. States which sought an extension of the deadline had to commit to auto exhaust testing.

Michigan officials initially resisted the program, but the federal EPA has threatened to block new industrial construction and cut federal highway money unless the program is implemented. Tailpipe tests have been instituted in 47 urban areas in 27 states.

In early October, the nearly 110,000 drivers with commercial plates in the Detroit metropolitan area will begin receiving license plate renewal notices that include information about exhaust testing. Motorists with non-commercial plates who must obtain plates or tabs in January will begin receiving mail renewal forms in mid-November.

Excluded from the program are vehicles more than nine years old, vehicles sold as new in the last 12 months, diesel or electric-powered vehicles, vehicles with a GVW rating of 8,500 pounds or more, motorcycles and mopeds and vehicles owned by persons receiving Medicaid and General Assistance.

'86 Detroit Grand Prix to run on downtown streets

DETROIT.—The 1986 Detroit Grand Prix will be run of on the streets of downtown Detroit, June 20-22.

The sponsors of the Formula One race said it will not conflict with various downtown building projects.

Truck production up 1.70 pct. at 71,678 units

Domestic manufacturers estimated production of 71,678 trucks last week, up 1.70 percent over the previous week's 70,481 and 7.32 percent more than the year-ago week's 66,786.

So far this year, 2,579,588 units have been assembled, 10.54 percent more than the 2,333,552 completed last year at this point.

Ford Motor Co.'s plant in Lorain, O., resumed production last Monday (Sept. 23) after settlement of a two-week strike over health and safety grievances.

General Motors scheduled overtime Saturday (Sept. 28) at its plants in Janesville, Wis., and St. Louis.

Ford plants in Kansas City; Louisville; Loraine, O.; Wayne, Mich., and Norfolk are scheduled for daily overtime this week (Sept. 30).

Ford also has scheduled Saturday (Oct. 7) overtime at the Lorain and Wayne plants.

Chrylser Corp.'s Warren plant worked overtime Saturday (Sept. 28).

The plant is also scheduled for two nine-hour daily shifts this week.

Output in Canada down for both cars and trucks

Scheduled output of 20,662 cars in Canada last week was down 5.93 percent from the previous week's 21,965 but was about even with (up 0.98 percent) the year-ago week's 20,462.

So far this year, 788,339 cars have been assembled, down 1.07 percent from the 796,869 built at this point last year.

Truck makers pegged production at 17,010 units last week, 9.74 percent lower than the previous week's 18,845, and 5.51 percent lower than the year ago week's 18,002.

Year-to-date, 639,483 trucks have been assembled, 5.54 percent more than the 605,888 built last year at this time.

Ford of Canada President Kenneth Harrigan said he expects the company's plant at St. Thomas, Ont., to continue to produce full-size Crown Victoria and Grand Marquis models through 1991.

More mergers, joint ventures seen for future

By Michelle Krebs
Financial Editor

The bloody battle among auto makers for dominance in market share and for profits in Western Europe resembles the shape of things to come in the U.S., according to the latest Automotive News World Outlook.

By the early 1990s, the North American market will be filled with more players than at any time in recent history. And they will have too much capacity in a market where demand is not forecasted to grow significantly. The result will be a vicious battle for market share which, in turn, will trigger a sea of red ink on auto makers' balance sheets.

A likely avenue out of the gridlock will be through mergers and more joint ventures among competitors as is beginning to take place in Western Europe, the World Outlook indicates. The World Outlook is a cooperative service of Data Resources, Inc. (DRI), and Automotive News.

"The U.S. industry is clearly heading for the situation of overcapacity and will have to live with the consequences of that," said John Lawson, DRI's London-based economist. "The current profitability of the industry can't be durable."

The World Outlook estimates that total North American car production will amount to 8.5 million units by 1990, about 4 percent less than in 1984.

However, automobile production capacity in the U.S. and capacity in foreign countries which is aimed at the U.S. will increase by about 15 percent. U.S. auto makers are gearing up production capacity, and Japanese companies are building brand new North American facilities.

Car demand, meanwhile, is not expected to keep pace with production capacity. Total U.S. car sales in 1990 are expected to be about 11.6 million units, an increase of only 7 percent over 1985's 10.8 million units.

"Worldwide capacity will be focused on North America," said John Hammond, DRI's U.S.-based economist. "The question becomes, how do you make room for everybody? How do you break out of the gridlock?"

By 1992, General Motors will have U.S. car production capacity of 4 million units per year, excluding capacity with its Japanese and South Korean partners. Ford Motor Co. will have car capacity of about 2 million units per year, excluding its foreign partners.

Four companies, including

Hungry hole

Jacksonville Journal

Sinkhole swallows vehicles, building at Florida deal

A sinkhole, which was 40 yards wide and 30 feet deep, swallowed two trucks, two cars, a motorcycle and a service building one night last week at Steve Hull Chevrolet, Jacksonville, Fla. Here, a truck teetering on the edge of the hole is pulled to safety. The building which slipped into the hole was a large carport-like structure under which workers wrote service orders and did minor repairs.

Ford, GM win lowering of '86 MPG standard

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—NHTSA has lowered the fuel-economy standard for 1986 cars from 27.5 MPG to 26 MPG. That is the same as the standard for 1983 models and is the lowest allowed for 1986 under the 1975 law.

The agency reacted specifically to petitions filed by Ford Motor Co. and General Motors, but the decision also provides relief requested by makers of European luxury cars.

The new standard provides flexibility for all and allows the fuel-efficient Japanese makers to rack up even more credits although so far they have not needed to use any.

In any case, hundreds of millions of dollars in fines from GM and Ford alone have been avoided, and the U.S. Treasury is the loser. On the other hand, jobs—said to number in the tens of thousands—have been saved.

Ford Vice President Helen O. Petrauskas called the decision "good public policy" in recognizing that not changing the standard would disrupt production and threaten jobs while adding "little, if anything, to petroleum conservation."

She said she hopes this is the first of two steps since Ford needs relief also for 1987-89 "if customer demand and gasoline prices remain relatively stable."

A GM spokesman made the same points: The NHTSA action is in accord with "both the law and the real world," but a similar adjustment for future years is "equally important."

Chrysler, which has opposed any lowering of the standard, said it was "extremely disappointed." It added: "We think the standard is good for America and the

Price boost is $373 on U.S. cars

By John K. Teahen Jr.
Managing Editor

Domestic auto makers have raised car prices an average of $373 for 1986, an Automotive News analysis discloses. The figure is for comparably equipped 1986 and 1985 models.

At introduction time a year ago, the average increase was $236.

The 1986 average includes the offerings of the four "home" manufacturers plus the models built in the U.S. by Honda (Accord), Volkswagen (Golf) and Nissan (base Sentra two-door).

By companies, the increases are: General Motors, $400; Ford Motor

And model-year total tops 11 million

September sales set a record

By Edward Lapham
Marketing Editor

Domestic auto makers last month posted record September new-car sales of 839,382 units and finished the 1985 model year on a winning note.

The old September sales record of 755,233 was set in 1971, before the OPEC oil embargo, when General Motors, Ford Motor Co., Chrysler Corp. and American Motors were the only major U.S. producers.

The final 10-day period, with retail deliveries totaling 314,120 units, was not a record although the financing incentives, which had produced records in the prior three periods, boosted the period total 59 percent above the 1984 mark of 197,585.

The period record of 485,631 was set in boom year 1972 at a time when all of the four domestic producers introduced their new models in time to be included in the late-September tally.

Total 1985 model-year sales made from Oct. 1, 1984, through Sept. 30, 1985, including domestic and import deliveries, were 11,071,284, up 7.25 percent from 10,322,411 in the 1984 model year.

The domestic model-year total of 8,389,649 was up 6 percent from 7,914,732 the preceding year, and was the highest tally since the 1979 model year.

The import total for the 12-month model-year period was up 11.38 percent to 2,681,635 from 2,407,679.

Import penetration in the 1985 model year rose to 24.22 percent from 23.33 percent in the 1984 model year.

Among the domestic producers, Honda posted the largest gain, up 27.7 percent. Chrysler was up 20.9 percent, Ford was up 13.8 percent and GM just barely pushed past the break-even point with a year-to-year gain of 0.8 percent.

Volkswagen's model-year sales total declined 14.1 percent and AMC fell 32 percent.

There was also a shift in market share among domestic makers. Chrysler's domestic sales tally increased to 13.64 percent from 11.96 percent. Ford's share rose to 25.87 percent from 24.09 percent the previous year, and Honda's penetration rose to 1.78 percent from 1.48 percent. GM, AMC and VW all lost market share.

Among the individual domestic marketing units, there were both winners and losers. Buick, Cadillac, Oldsmobile, AMC, Renault and VW were the makes which failed to better their 1984 model-year totals; all the rest posted gains.

The combined domestic-import September sales total of 1,076,051 was up 46.6 percent over the year-ago month, and monthly sales rec-

He pleads innocent to 15 federal charges

DeLorean trial date scheduled Nov. 18

By Edward Lapham
Marketing Editor

Former auto maker John Z. DeLorean came home to Detroit last week and pleaded innocent to all 15 counts in the Sept. 20 federal grand jury indictment.

The plea was entered by attorney Howard Weitzman, one of the lawyers who represented DeLorean when he was acquitted of all charges in the Los Angeles federal drug-trafficking trial in 1984.

DeLorean was released on $1 million unsecured bond.

Under the terms of his release, DeLorean must check in once a week with the Pretrial Services Agency and keep them apprised of his travel schedule.

He is not allowed to leave the country without permission.

Following his arraignment before Federal Magistrate Virginia Morgan, DeLorean, his attorneys and federal prosecutors appeared at a pre-trial conference before U.S. District Judge Julian A. Cooke Jr., who will hear the case.

A preliminary trial date of Nov. 18 was set. However, both prosecution and defense attorneys indicated procedural matters are likely to push back the trial date, perhaps until next spring or later.

Following the official proceedings, DeLorean and lawyer Weitzman appeared on the courthouse steps for an impromptu press conference and photo session with a large contingent of reporters.

As he did in Los Angeles, DeLorean let Weitzman do most of the talking at the press conference. The lawyer again maintained DeLorean's innocence.

The government has charged DeLorean with racketeering, income tax evasion and a number of other charges relating to $17.65 million which disappeared from the DeLorean Motor Co. sports-car project in 1978 and 1979.

In addition to denying the charges, Weitzman also said he did not consider a 10-page order issued by District Chief Judge John Feikens a "gag order."

The ex parte order, entered by the U.S. Attorney's office the day of the indictment, admonished lawyers from both sides to conduct themselves with appropriate professional demeanor.

Although DeLorean let his lawyer do most of the talking, he did at one point quip, "It was not the homecoming I was looking forward to."

Nonetheless, there was every indication the Detroit trial could turn into the same kind of overblown media event as the Los Angeles trial.

DeLorean was dressed in his fa-

Media cover DeLorean homecoming

Former auto maker John Z. DeLorean and his lawyers held an impromptu press conference on the steps of the Detroit Federal Building following his arraignment on federal racketeering and fraud charges. "It was not the homecoming I was looking forward to," DeLorean quipped. Press coverage made it a media event.

Jeep CJ won't move to Canada for finale

By Richard Johnson
Detroit Reporter

BRAMPTON, Ont.—American Motors will phase out its venerable Jeep CJ model next year, but company officials have decided to build it out in Toledo, not Brampton as was previously planned.

Meanwhile, the company's Jeep YJ replacement, scheduled to be launched in the Canadian plant beginning next spring, is being described by sources as a more-stylish version of the open-bodied CJ.

In addition, company officials said last week that other U.S. states are beginning to stand in line with with proposals should AMC decide to abandon car assembly in Kenosha. Richard Calmes, AMC vice president, personnel and industrial relations, said "five or six" states have approached the company and he acknowledged "some preliminary discussions" with representatives of other states.

AMC President Jose Dedeurwaerder discussed plans for CJ last week during a reception at a new $675 million assembly plant under construction in the Brampton area.

Several weeks ago, AMC announced plans to move CJ-7 production from Jeep assembly operations in Toledo to Brampton, where the four-wheel-drive Eagle is now built. The shift to Canada

Japanese say yen rise may boost prices

By Frank Gawronski
Tokyo Bureau Chief

TOKYO.—If the yen increases further against the dollar, Japanese automobile manufacturers may have to raise prices of the vehicles they sell in the U.S., according to Takashi Ishihara, president of the Japan Automobile Manufacturers Assn.

Ishihara, who also is chairman of Nissan Motor Co., said profits of Japanese auto makers will decline in the last half of fiscal 1985, ending next March 31, as a result of the recent sharp appreciation of the yen against the U.S. dollar.

Ishihara said Nissan alone will record an exchange loss of about 60 billion yen ($27,548,209) if the yen's exchange rate goes up by an average 20 yen in the latter half of fiscal 1985.

He also said U.S. automobile manufacturers "may file dumping charges against us if the dollar prices of Japanese cars fall in accordance with the yen's appreciation."

Tsutomu Ohshima, Toyota Motor Corp. senior managing director, said Toyota loses 4 billion yen every time the Japanese currency goes up one yen against the dollar.

Asked if Toyota would increase prices if the yen continues to appreciate against the dollar, Ohshima said the company has not planned that far ahead.

Composite standard of 20.5 set for benefit of Ford

NHTSA eases truck MPG rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—NHTSA has set new light-truck fuel-economy standards for 1987 models at a level that can be met by Ford Motor Co., whose light-truck fleet is the least fuel-efficient.

The composite standard is 20.5 MPG. The separate standard for 4x2s is 21.0 MPG, and the standard for 4x4s is 19.5 MPG.

That compares with the 1986 light-truck CAFEs: 20 MPG composite; 20.5 MPG for 4x2s and 19.5 MPG for 4x4s. Those were also set for the benefit of Ford.

The original 1985 light-truck standard had a composite CAFE of 21.0 MPG. Ford petitioned for a reduction of the 1985 and presumed 1986 composite levels of 21.0 on grounds that market demand would make it miss the standard by 1.5 MPG.

Meanwhile, the Center for Auto Safety had petitioned for higher standards in October, 1984. NHTSA rolled back the 1985 composite standard to 19.5 MPG and set a new 1986 standard of 20.0 MPG, a level which Ford is expected to meet. The arguments used in that NHTSA document are basically the same as those used in setting the new 1987 composite standards.

The Center for Auto Safety is already in court over NHTSA's "unreasonable delay" in setting the 1987 light-truck standard, which the law says is to have 18 months leadtime. The NHTSA anouncement on Oct. 2 gives barely 12 months leadtime.

Separately, the center has also sued over the 1985 and 1986 light-truck economy standards, which were lowered in response to a petition by Ford. The CAS, which is joined by the Environmental Policy Institute, Public Citizen, and the Union of Concerned Scientists, argues that the "maximum feasible" level should not be that of one "laggard" truck maker.

In March, 1984, NHTSA had proposed a composite standard for 1987 light trucks in the range of 20.1 to 22.5 MPG.

The issues in setting the 1987 standard are much the same as in the rollback in the 1986 passenger-car CAFE and in the rollback of the 1985 light-truck CAFE.

Emphasis is placed on consumer demand for larger engines—although in the case of trucks, load-carrying capacity and specific jobs are considered. Change in the price of fuel is also mentioned. Further, some consideration of EPA regulations is given, although in the case of light trucks there is no CAFE adjustment factor.

NHTSA focused on the capabilities of General Motors, Ford and Chrysler Corp. since they account for more than three-fourths of light-truck sales. Moreover, since the domestic companies provide larger trucks and vans for commercial purposes, they have a greater problem than the importers.

However, the agency concluded that Ford is the "least capable" and since Ford is the petitioner, its needs must be addressed. NHTSA projected that Ford could achieve an average light-truck CAFE of 20.3 to 21.0 MPG while GM could achieve 21.1 to 22.4

GM's '86 warranty expanded to 36/36

General Motors said last week that engine and transmission warranty coverage on its 1986 cars will be expanded to a minimum of 36 months/36,000 miles.

Ford Motor Co. had announced no changes in its warranty at presstime. Chrysler Corp. already has a 5-year/50,000-mile powertrain warranty.

James G. Vorhes, GM vice president in charge of the Customer Sales and Service Staff, said the new warranty extends coverage on major engine, transmission and axle components on both front-drive and rear-drive cars from the current 24-months/24,000-miles (whichever occurs first) to 36 months/36,000 miles.

The basic 12-month/12,000-mile warranty on the entire car remains unchanged.

The expanded warranty applies to the new full-size front-wheel-drive Buick LeSabre and Oldsmobile Delta 88. Warranty coverage for the new Buick Riviera, Oldsmobile Toronado, Cadillac Eldorado and Cadillac Seville will be announced when the cars are introduced later this fall.

Warranty terms remain unchanged on the front-drive Cadillac DeVille and Fleetwood, Buick Electra and Oldsmobile Ninety-Eight models introduced last year. GM said those models, along with the Chevrolet Corvette and Pontiac STE, already have warranties equal to or better than those cited above.

GM Protection Plan service contracts also have been modified for the 1986 model year to complement the new powertrain warranty coverage.

Similar to the coverage offered on the full-sized Cadillacs, Buicks and Oldsmobiles last year, the new Protection Plan contracts—also called "Major Guard"—will cover "virtually everything on the car" except for normal maintenance items, paint and trim, Vorhes said.

The new plans include several options ranging up to five years with unlimited mileage, GM said.

1,000 more Yugos arrive in U.S.; orders top 7,500

MONTVALE, N.J.—A second shipment of Yugos—1,058 vehicles—arrived at the Port of Baltimore from Yugoslavia last week. They joined 500 that arrived in August.

William Prior, president of Yugo America, Inc., the U.S. importer, said the $3,990 three-door hatchback is now being offered by 90 dealers, the majority of which are in the Northeast corridor of the U.S.

The car went on sale Aug. 26 and retail orders have topped 7,500, Prior said. "Dealer-recorded orders with deposits have exceeded original projections, and indicate an annualized sales rate of 100,000 cars.

"We have announced that we will import 40,000 cars in our first year of operation," he said. "It is obvious that supply will not keep up with demand."

Prior said Yugo America is talking with Zastava, the car's manufacturer, about an increase in production capacity.

Current production schedules call for 75,000 cars to be imported into the U.S. in the second year, 110,000 cars in the third and 150,000 in the fourth year.

Jaguar holds line on 1986 car prices

LEONIA, N.J.—Jaguar has held the line on the prices of its 1986 models.

The prices, unchanged from 1985, are: $32,250 for the Jaguar XJ6 sedan; $35,550 for the Vanden Plas sedan, and $36,000 for the Jaguar XJ-S sports coupe. Prices are at port of entry and do not include dealer preparation charges and transportation.

Will automobiles of the future resemble the PSC1?

Soft debut for soft PSC1

ARG is absent from unveiling of the prototype

By Anne Hope
Special Correspondent

OXFORD, England. — PSC1 stands for Pedestrian Safety Car One and it points the way cars could be going shortly. It is a soft touch automobile — a car kind to pedestrians that it might hit and more likely to injure than kill.

Therefore, one would prefer to be knocked down by PSC1 than by a base or standard Metro car from BL's Austin Rover Group. But ARG kept a low profile when PSC1 was unveiled at the 10th international conference on experimental safety vehicles.

Though ARG was consulted before PSC1 was developed, no one from ARG was at the unveiling in the historic university town of Oxford — and no one was present to confirm or deny rumors that PSC1 features could be incorporated into the Metro replacement.

PSC1, a concept car, was the brainchild of Adrian Hobbs, who at 39 is a senior scientist at Britain's Transport and Road Research Laboratory (TRRL), a British Government agency, at Crowthorne in Berkshire County.

The development of this soft touch car is based on the results of tests by the TRRL in association with ARG.

The PSC1 is developed from a standard Metro modified by Douglas Simpson, a bodywork specialist, of Camberley, Surrey, England, for the TRRL.

The safety features of PSC1 have been validated by extensive crash testing of earlier prototypes.

But neither Hobbs nor anyone from BL at the ESV conference would comment on the rumor that PSC1 was an embarrassment to ARG. For, apparently, the car could give rise to product liability claims from consumers — who might suggest that the standard Metro *isn't* kind to pedestrians.

At the Oxford conference, attended by 475 delegates, 127 papers were presented and PSC1 was not only closely examined but prodded.

It was prodded so much that its hood, deliberately weakened to be soft and therefore kind to pedestrians, was damaged by fists as people thumped it to see just how much it might give.

The PSC1 has an air dam incorporated into its bumper. Ten years ago people would have said that such a spoiler had little boy racer connotations, but today it is accepted as having a useful function and as being a safety feature, commented Hobbs.

The PSC1's front bumper, 8 inches high and 6 inches deep and made of polyurethane foam, deforms when it hits a pedestrian, rather than breaking legs, even when travelling as fast as 25 miles an hour.

The bumper no longer sticks out because the car's hood has been extended 3 inches to soften its front end — to protect an adult pedestrian's pelvis or a child's abdomen.

Compared with a standard Metro, PSC1 has a sloping hood. The hood's frame has been weakened to prevent serious head injuries. The front headlamps will collapse backwards if a pedestrian is struck and the front edges of the fenders will break away.

To prevent a pedestrian's head from being pierced by windshield wiper rods, these are hidden. There was a time when wipers, when not in use, were usually hidden on cars made in the U.S.

But they now usually stand proud, which many would say was a step backward, from a safety point of view.

Unfortunately, PSC1 is simply a one-off. But so many engineers, designers and legislators examined the little car that it seems probable that many of its features will be adapted on upcoming cars including even ARG's Metro replacement.

Though there are only a few styling differences between PSC1 and the standard Metro, all changes to its bodywork were vital from a safety point of view.

ARG delegates at the conference were unwilling to take credit for any of their contributions to the car. And no one at the TRRL would comment on the absence of ARG people from the exhibit area where the car was unveiled and displayed.

New 309 ready to roll for Peugeot

Five-door hatchback fills a gap in lower-medium segment

The new 309 model rolling out of Poissy, France, will be an even more important car to Automobiles Peugeot than the hot-selling 205. It gives the recovering Peugeot a truly modern competitor in the largest segment of the western European new car market.

That lower-medium group was worth about 3.6 million units last year, or about 35 percent of total. Furthermore, the segment continues to grow, having accounted for only about 25 percent of business a decade ago.

It is one dominated on a continent-wide basis by the VW Golf, Opel Kadett/Vauxhall Astra and Ford Escort, and on a national basis by the Renault 11 (France and Spain) and Fiat Ritmo (Italy). A glance at the best seller lists from practically every European country indicates the popularity of the category.

And yet it was one in which Peugeot was until now poorly represented. Its Talbot Horizon was fading, and while the Peugeot 305 sedan held up remarkably well in France, the real segment demand is for a five-door hatchback. The Peugeot 309 is just that. The Horizon has gone, another indication of the Talbot name's demise, though the 305 will continue in production.

The 309, developed under the code numer C28, will be important to Peugeot in another respect. It will reduce the company's dependence on the 205, a smaller car in the Fiat Uno/Ford Fiesta/Renault 5 category. The 205 is the French best seller. It has lately been built at a daily rate of 2,350, which is among the highest in Europe. But until the advent of 309, it was carrying the success of Peugeot's future. Last year, for example, 42 percent of the company's worldwide production (883,200) was of 205; this year's proportion will have been higher still.

Beginning in April next year Prissy will be manufacturing 309 at a daily rate of 1,000. In addition, the company's plant at Ryton, England, will then be capable of assembling 1,000 a week from Poissy-supplied kits. For Ryton, whose assembly is just about to begin, it will mark the first UK-built Peugeot, previous models having been Talbots.

Peugeot has invested approximately $275 million in the new vehicle, about half of it in refurbishing facilities at Poissy. The body welding area has been the focus of attention, utilizing many Renault robots, with the result that Poissy is now capable of building all body varieties of three separate model lines. It is the company's most advanced factory, and is said to be among the best in Europe.

The cleanliness and automation contrast sharply with the picture at the end of 1983 and beginning of 1984. Then, a worker revolt over a redundancy plan led to violence, vandalism and gun-toting intimidation. The scenes of anarchy made TV news bulletins around the world.

A peace formula was eventually reached, and Peugeot went ahead with C28 production plans it had threatened to cancel. The Ryton investment amounts to a more modest $40 million.

The 309 is expected to take some sales away from the 205, though the two are seen as complementary. The new model goes on sale in France in October, and into export markets at the beginning of next year.

The Peugeot 309 will go on sale in France in October.

VW Golf still hot in Europe

Volvo 700 moves into first place in Sweden

New-car sales in Europe's 10 largest markets in the first half of this year revealed one major change over last year: The Volvo 700 went to No. 1 in Sweden, demoting the long-standing leader, the Volvo 200-series.

The top 10 placings from the 10 national markets — which between them account for 94 percent of Europe's passenger car registrations — confirm the regional differences. There were seven different market leaders, with only the VW Golf (three) and Opel Kadett (two) scoring more than once.

The Golf appears to be the most popular model on a pan-European basis too. It recorded placings in all but two national markets, the U.K. and Spain. The widespread appeal of the Kadett and Ford Escort is also confirmed by these returns.

By far the most popular model in a single market was the Fiat Uno. It accounted for more than one in every five Italian sales in the first half of this year. The nearest any other car came to that was the Peugeot 205's 13.6 percent in France. In number terms, too, the Uno's Italian appeal was unparalleled — 211,000. In unit terms, the best any other model achieved was the 156,500 by the Golf in West Germany.

Renault's new generation R5 has done wonders for it in many markets, particularly Italy, Belgium and the Netherlands. But it has so far had less of an impact on the company's two most important markets, France and Spain.

Volvo's dominance in the Swedish market is underlined by the two models occupying the top two places. Between them, the 700 and 200 series account for 22 percent of all Swedish sales. Sweden is one of the few countries in Europe where large cars hold sway over medium and small models.

Even in West Germany, sales of the medium-range Mercedes-Benz 190, BMW 3-series, VW Passat, Audi 80/90 and Ford Sierra are topped by the Golf and Kadett. Indeed, this category of car dominates European sales — whether it is Golf, Kadett, Escort or Renault 11 (Encore).

SAMMIE designs shapes of things to come

New computer can simulate people and environments

By Anne Hope
Special Correspondent

LEYLAND, Lancashire, England. — Many U.K. cars, derived from left-hand-drive models, leave a good deal to be desired in terms of arrangement of controls, ease of reading essential instruments and their general ergonomic layout.

Also, few things can be as confusing to a driver as seeing the same object apparently closing in as it disappears from one mirror and almost immediately reappears on another mirror.

All of these need a touch of SAMMIE. SAMMIE is an acronym that stands for "System for Aiding Man/Machine Interaction Evaluation."

SAMMIE is an easy-to-use 3-D Computer Aided Design modelling system which can be used to build a simulated environment such as a car, cockpit, office — even a kitchen — anywhere that people and objects must interact in order to complete specific tasks successfully.

The principal benefit over the traditional approach of a mock-up or a prototype is that SAMMIE saves time and money and avoids impossible solutions early in the design process, many months before costly tooling has been commissioned.

The multicolored graphic representation of people and objects in their correct spatial relationship to one another allows the design and development team to try out so many combinations that it is virtually certain that all shapes and sizes of people are accounted for.

The simulated human is created from a series of standardized shapes; all joints can be given the correct amount of 3-D movement that a live person would have. The most unusual feature of SAMMIE is that, unlike conventional dummies, this man-model can be given "sight."

It is easy to change the size of such fundamental shapes as arms, legs, feet, hands, torso and head. SAMMIE can, therefore, be given a wide range of possible postures; and it is easy to establish whether blind spots might result.

You could say that SAMMIE represents the shape of things to come. The driving force behind SAMMIE is a powerful U.S. corporation that did not even exist 14 years ago yet, by 1984, had a sales turnover of $643-million.

Taking over the ideas and the first computer program from England's Nottingham University, the company, called Prime, based in Natick, Mass., Prime has since developed the ideas in-house in close collaboration with ultimate users, such as Leyland Bus and Truck's Technical Centre, with a venture supported by the British Government at a cost of 22 million pounds.

The cost of the SAMMIE program is, in fact, a small part of this expenditure. Much of the basic ergonomic work for the new cab for the new Leyland Roadrunner was done using SAMMIE.

Thanks to SAMMIE, the new Roadrunner range of light trucks combines the advantages of commercial vehicles with those of passenger cars. Roadrunner has a totally new cab, called the C44, which is highly efficient — compact yet spacious — on a purpose-designed chassis.

By adjusting the steering column and seat, the driver can choose a traditional flat-wheel, truck position or a raked-wheel position similar to most cars. The driver's seat is highly ingenious, with slim, comfortable seat cushions, which result in good interior space while incorporating — for the first time ever in a truck, claims Leyland — a pump-up adjustable lumbar support to prevent trucker's backache.

The versatility of SAMMIE is best demonstrated by making a cyclist suddenly appear in the outside driving mirror: One can follow his progress alongside the vehicle or, for that matter, see a child chasing a ball right in front of a truck cab.

To avoid traffic accidents caused by drivers failing to see, in time, that pedestrians or cyclists are approaching dangerously close, Leyland modified the mirrors of the Roadrunner and introduced a kidney-shaped "Curb-Finder Window," which gives a driver a remarkably good forward view — much better than anyone can realistically hope for.

Robin Dickeson, Leyland's product affairs manager, claims: A highly significant feature — and the most recognizable to other road users at least wherever the Roadrunner is sold, is its asymmetric front window set below the level of the windscreen on the passenger side.

Driver vision has received particular attention, with computer models used to develop windscreen, front curb-window and rearview mirror positions, he said.

Prime, one of the world's four largest suppliers of superminicomputer systems, has the highest sales of any minicomputer manufacturer selling turnkey CAD/CAM systems.

Prime has 37 sales offices located in 14 European countries, with its European headquarters in West London, England.

Leaders in Missouri

Jim Robertson, second from left, Jim Robertson Chevrolet-Toyota, Kirksville, accepts the gavel from Carlo Merlo, Glendale Chrysler-Plymouth, St. Louis, and becomes the 47th president of the Missouri Automobile Dealers Assn. Other new MADA officers are Lou Fusz Jr., left, Lou Fusz Motor Co., St. Louis, treasurer, and Charles L. Anderson, Chuck Anderson Ford-Mazda, Excelsior Springs, second vice president. Not pictured is Hal Quinn, Hal Quinn Buick-Honda-GMC, Independence, first vice president.

Worker-owned plant for sale as GM refuses to back loan

General Motors is working with Hyatt-Clark Industries, Inc., to find a buyer for the New Jersey roller bearing plant, bought from GM by employes in 1981.

The former New Departure-Hyatt Bearing Division plant in Clark, N.J., was threatened with closing in 1981, and the $53 million sale was one of the first and largest employe-buyouts of a factory.

GM is the biggest customer of the financially troubled company and has a contract to buy roller bearings through Oct. 31, 1987.

On Sept. 4, GM refused a request from Hyatt to guarantee an additional bank loan, a GM spokesman said.

"We already have a substantial investment in Hyatt-Clark," the spokesman said. "And based on that and a thorough analysis of the operation, it came down to a business decision not to guarantee additional investment loans. We are working closely with them in their efforts to find a suitable buyer."

The company lost $5 million in the fiscal year ended Aug. 31, Chairman Alan Lowenstein said.

Lowenstein said the contract with GM contributed to the company's losses.

The contract stipulates that GM pay the prevailing market price, and that price dropped because of Japanese competition, Lowenstein said.

GM accounts for 85 percent of the total sales volume which exceeds $90 million annually, he said.

Lowenstein said a large debt service obligation, labor-management troubles and the need to invest in equipment upgrading also led to the decision to sell the plant. The plant has 1,300 employes.

Since the employe purchase, Lowenstein said, the company has expanded its roller bearing product line and acquired additional customers including Dana Corp., Budd Co., General Electric and a number of railroads.

About half of the 950 workers employed at the time of the 1981 sale remain on the payroll, Lowenstein said. The others retired or transferred to other GM divisions to secure higher wages and job security, he said.

The company's 12-member board of directors includes three representatives from the UAW local at the plant.

Town license fee hiked 400 pct. by Chapel Hill, N.C.

CHAPEL HILL, N.C.—The Town Council has voted to increase its license fee for motor vehicles 400 percent but has given auotmobile owners a one-year reprieve to pay it.

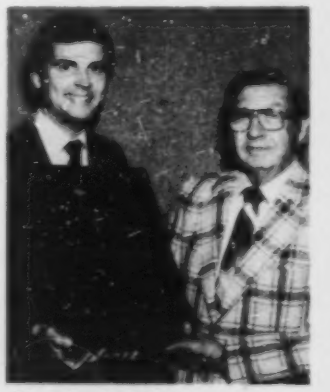
Owners have been paying $1 a year for their town licenses. Beginning in 1986, they will have to pay $5. North Carolina law limits local license fees to $5.

The town now raises about $7,800 annually with the $1 fee. Its manager, David Taylor, said collection rates would be increased if the owners paid the fee at the same time they pay their county taxes.

The fee is now collected throughout the year, but Taylor said a new procedure being worked out would call for collections at the beginning of the fiscal year.

To get the procedure under way, all collections will be halted until June 30, 1986.

The fee is paid annually for windshield stickers. Town officials believe more owners would pay it if they could do so at the same time they have to pay their county taxes.



Fortino's 25th

Firestone will close two passenger tire plants

ALBANY, Ga.—Firstone Tire & Rubber Co. said it will close its tire plant here by April 1 because the company does not need so much capacity.

The company also announced it is eliminating the passenger tire operations in Des Moines. Firestone's seven plants in North America have been operating at only 75 percent capacity in recent months and the company said stiff competition, both domestic and foreign, has cut deeply into passenger tire profitability.

Ford, GM win eased '86 MPG standard

Continued from Page 1

American consumer. It should be good enough for all of America's auto makers."

NHTSA said the "maximum feasible level" is 26.0 MPG—the level requested by GM, Ford, and the Automobile Importers of America on behalf of its European members. NHTSA made that finding even though Ford and GM now are projecting they will achieve 26.3 MPG for 1986 models.

NHTSA said its decision recognizes that there are "significant risks" that both may be unable to reach their projected levels, and the lower standard gives them a "a slight margin for risks."

Both companies are concerned about higher sales of Japanese cars which may cut into their sales of smaller cars, and Ford is suffering because of delays in introducing the more-fuel-efficient Taurus/Sable, which now are scheduled to debut the day after Christmas.

NHTSA recognized that Ford and GM sales represent more than 60 percent of the market and felt that a maximum feasible level for them was a maximum feasible level for the industry, even though it was above the achievable level of all.

NHTSA said, "With the exception of Jaguar, Mercedes-Benz and possibly Saab, the agency believes the rest of the industry is capable of meeting the 26.0-MPG standard, although compliance may be close for some of the European manufacturers."

Labeling the decision "prejudged" and "wrong," Clarence Ditlow III, director of the Center for Auto Safety, promised a legal challenge.

The center has maintained that both GM and Ford can meet 27.5 MPG but chose instead to continue making big profits on big cars which are cheap to produce since they are old rear-wheel-drive designs with V8 engines. The center said GM and Ford could pay their fines—amounting to about $75 per car—and still make money.

Ditlow is expected to file a legal challenge with NHTSA over what the "maximum feasible level" is.

In its 100-page decision, NHTSA rejected the center's arguments one by one and presumably would also reject any future petition for reconsideration along those lines. Similar arguments, however, could be addressed later in federal appellate court for the District of Columbia circuit.

While CAS and Chrysler say Ford and GM should pay their fines, the Big Two say paying fines is impermissible.

Ford and GM say they must meet the standard by curtailing production of large cars, causing layoffs, or—in Ford's case—possibly moving production of parts for large cars overseas.

Estimated 1986 CAFE levels (not using an EPA CAFE adjustment factor) for European car makers are: 26.1 MPG for BMW, 19.2 for Jaguar, 25.6 for Peugeot, 25.4 for SAAB and 26.5 for Volvo.

Porsche and Mercedes-Benz are also well below the statutory 27.5 MPG (and, in fact, Mercedes will be paying gas-guzzler taxes on four of its models), but neither has filed estimated 1986 CAFE figures with NHTSA.

The NHTSA decision essentially agreed with arguments made by GM and Ford—finding that both companies had made substantial progress in meeting the 1986 standard but were thwarted by "unforeseen events" including a shift in consumer demand for large, high-performing cars and by a glut of cheap gasoline.

Further, it is too late for them to take drastic measures on the eve of the 1986 model year. Severe restriction in product offering would mean significant adverse economic effects—sales losses in the hundreds of thousands and job losses in the tens of thousands.

NHTSA expects to issue shortly a notice proposing a range of alternatives for 1987 and later model years in response to petitions from Ford and GM and a request from AIA for its European members.

In explaining changes in GM's projected CAFE, NHTSA said that GM is no longer planning to extend the model year for B and G models and that GM is not trying to count NUMMI production because the Nova has less than 75 percent domestic content and is therefore considered an import.

In further explanation, NHTSA noted the possibility of NUMMI obtaining an exemption and transferring it to GM. But so far, NUMMI has not used its discretion to apply. In addition to the issue of whether the exemption if granted could be transferred to GM, a further issue exists: Whether GM could use this for carryforward/carryback credits.

As for Ford's projections, NHTSA noted the crucial effect of the delay in introducing the more-fuel-efficient Taurus/Sable to substitute for the LTD/Marquis and to offset bigger engines in the Escort/Lynx, more sales of an optional engine for the Mustang/Capri and introduction of a new version of an unspecified existing vehicle. The Taurus/Sable could mean a 0.4-MPG change.

Ford has also said it has no plans for unusual production schedules for the 1986 model year, except for the large Crown Victoria/Grand Marquis and the Tempo/Topaz, which will have a 10-to-11-month year and the LTD/Marquis, which will have an even shorter one. NHTSA said those schedules should have a minor effect and, in most cases, should increase Ford's CAFE.

NHTSA also said that Chrysler has been lowering its own projected CAFEs: From an earlier estimate of 27.5 MPG for 1985 models to 27.3 and from an earlier estimate of 28.1 for 1986 models to 27.7 MPG (all without EPA cafe adjustment).

Chrysler plans a number of technological changes in engines, carburetors, tires and oil.

"However," NHTSA said, "with the phase-out of the L-body (Omni/Horizon) car line (to be replaced by the new P-body compact model, introduced in mid-1986 as a 1987 model), the proportion of compacts and subcompacts in the Chrysler fleet should decline from model-year 1985 to model-year 1986.

Later in its decision, NHTSA said that Chrysler's fuel economy is not very different from that of GM or Ford for the market segment in which it does compete.

"Thus, if the sales mixes of all the manufacturers were equivalent, GM and Ford would have higher CAFEs than does Chrysler," NHTSA said.

In addition, NHTSA said that Chrysler—like Ford and GM—has failed to replace relatively heavy rear-drive M-body models (with fuel economy about 6 MPG lower then the equivalent fwd models)with versions of the K-car.

The scene will now shift to the courts, as it has repeatedly during the Reagan Administration.

Charting CAFE since law began

WASHINGTON.—The law calling for Corporate Average Fuel Economy standards was passed in December, 1975, and auto makers were given 18 months' leadtime.

The first standard—18 MPG—took effect for the 1978 models.

Following are the CAFE standards for passenger cars by model year.

1978	18
1979	19
1980	20
1981	22
1982	24
1983	26
1984	27
1985	27.5
1986	26
1987 and thereafter	27.5

Joe Wilsens

John, Tyrone walk and talk

Former auto maker John DeLorean, followed by a group of reporters, put his arm around Tyrone Studivant while walking from the courthouse to his hotel. DeLorean was in Detroit to be arraigned on federal racketeering and fraud charges. Lately, DeLorean has been widely professing his concern for, and efforts on behalf of, racial equality.

DeLorean pleads innocent; Nov. 18 trial date set

Continued from Page 3

miliar double-breasted navy blue blazer with gray wool slacks. Surprisingly, his trademark London-made Turnbull & Asser light blue shirt with elongated collar points was replaced by a more traditional white version. He also wore a conservative red and blue striped regimental tie and black boots.

A crowd of passersby formed, both inside the Federal Building and on the street whenever DeLorean was expected to appear.

In fact, two teenaged girls, in "punk" garb, squealed with apparent delight when DeLorean and Weitzman finally emerged from the Federal Building into the light drizzle.

"I want to have your baby!" one of the girls shouted with glee.

When the quickie press conference ended, DeLorean and Weitzman walked two blocks to a hotel, followed by a horde of photographers and TV cameramen who fairly stumbled all over themselves to keep up.

At one point DeLorean, who blasted the racial composition of the grand jury which indicted him and professed strong feelings about racial equality in his recently published autobiography, stopped to put his arm around a black man the entourage encountered on the way to the hotel.

The carnival atmosphere should be restricted, at least for a while, because it is not likely John DeLorean will make many appearances until the trial itself begins.

Weitzman said it is likely DeLorean will not appear much during the procedural phase.

Peugeot dissidents seek scalps of top executives

Continued from Page 2

around. Key Peugeot executives were preoccupied with the launch and introduction of the 309 to the French dealers.

In the U.S., Peugeot's sales pace is considerably below last year's, when deliveries totaled 20,000. Through August of this year, the total was 10,993, compared with 12,242 in the same period of 1984. Last week, Fitzhenry admitted the company probably will not reach 20,000 this year.

But the battle last week appeared to center on the telegram itself. The four dealers selected by PMA said they were opposed to the telegram, or to the way the decision was made to send it. The decision was based on a vote of the board of directors.

One, Rob Engle, president of Tenafly Peugeot, Tenafly, N.J., was the former secretary of the association and has since resigned. He claimed the "posture taken is not the consensus of the group."

Ed DiBenedetto, president of Ed DiBenedetto, Inc. (Buick-Saab-Peugeot), Bayside, N.Y., said "we did not get a solid vote one way or another for what happened, that's what happened here."

DiBenedetto, who read from a prepared statement, said this type of action should have been based on the vote of the complete membership at a general meeting. It was DiBenedetto who used the term "abuse of power."

But a member of the board of trustees who attended last week's meeting said that under the charter of the association, the board does have the power to take such action.

He said it appeared to him that the issue was not whether the whole membership knew or did not know but whether they disagreed or not.

Chamis said the move by PMA to include dealers and to poll dealers was an attempt to "fragment the association."

Light-truck MPG standard eased to 20.5 by NHTSA

Continued from Page 3

MPG and Chrysler could achieve 21.6 MPG.

Currently, Ford is projecting 20.2 MPG for its 1986 light-truck CAFE; GM, 20.3 MPG; and Chrysler, 19.9 MPG, significantly lower than the numbers NHTSA used when it set the 1986 light-truck CAFE because Chrysler deferred introducing a new compact pickup from 1986 to 1987.

In its petition, Ford said that to achieve the 1.5 MPG it would need, "sales reductions of 100,000 to 180,000 units at Ford could occur, with resulting employment losses of 12,000 to 23,000 positions at Ford, its dealers and suppliers."

NHTSA accepted that possibility and agreed that if consumers want larger trucks and/or larger engines and cannot get them from Ford, they will get them from GM or Chrysler.

NHTSA's analysis of the economic impacts felt by truck makers to improve fuel economy of individual models indicated an average retail price increase of $130 per vehicle. But the agency said that could be offset by estimated operating cost savings of $155 for the average 1987 light truck due to reduced lifetime gasoline consumption.

"Overall, the agency projects the domestic manufacturers' automotive operations to remain profitable for the 1987 model year, based on current market trends," NHTSA said.

NHTSA refused to give any adjustment because of stiffer hydrocarbon and carbon monoxide standards because EPA said no fuel penalty would be involved, and this was backed up by the Transportation Department's Transportation Systems Center. Also, the tightening of the NOx standard, scheduled for 1987 models, has been postponed until the 1988 model year.

Some leeway, however, was granted because of the diesel particulate standard. GM argued that the stringency of the standard could effectively ban diesel engines in light trucks.

In setting 20.5-MPG composite as the "maximum feasible" level, NHTSA balanced the potentially serious economic effects and technological risks against Ford's opportunities to raise its fuel-economy levels. It said its actions to assist Ford were justified since that company produces more than 30 percent of all light trucks subject to CAFE standards.

And model-year total tops 11 million

September sales set a record

Continued from Page 1

ords fell like leaves in an autumn breeze.

Domestic penetration was up to a very strong 78.0 percent from under 76 percent the previous year.

GM boosted its share of the market to 55.15 percent in September from 53.86 percent the previous year. All of the other makers, except Nissan which only just began building cars in the U.S., lost market share. Chrysler's slice declined to 12.98 percent, Ford slipped to 27.33 percent, AMC dropped to 1.45 percent, VW fell to 0.77 percent and Honda dipped to 1.53 percent. Nissan's penetration was 0.79 percent.

During September, GM posted the largest year-to-year gain of 51.7 percent. Ford and Chrysler each boosted their domestic car sales total by 46.1 percent. Sales of VW's domestic makes rose 34.9 percent while Honda's domestic sales total was up 10.4 percent. AMC sales fell 9.3 percent.

The daily selling rate was 39,265 in the final period of the month, and 34,974 per day for the whole month. The daily selling rate in September, 1984, was 23,611.

Domestic segmentation in the month shifted slightly from the year-earlier period. Subcompact models accounted for 15.38 percent of the market, compared with 15.03 percent the previous year. Compact makes for 16.53 percent compared with 19.31 percent in September, 1984.

Intermediate makes took 27.95 percent of the market last month compared with 23.32 percent last year. Standard-size makes accounted for 9.1 percent in September versus 10.25 percent last year, and luxury makes took 9.04 percent of the total compared with 8.29 percent last year.

XR4Ti to share in L-M's new identity program

ANAHEIM, Calif.—Lincoln-Mercury's imported German sports coupe will share in the division's new marque identity for 1986.

Edsel Ford II, L-M general marketing manager, said more attention will be paid to calling the car an XR4Ti rather than a Merkur, since a second car, Scorpio, will be added to the Merkur franchise in late 1986.

Since the car's launch, it has been known primarily as the Merkur. "When Scorpio comes, we're going to have some confusion," Ford said, explaining the need to stress the XR4Ti nameplate.

As Ford announced earlier, L-M will merchandise the Continental, Mark VII and Town Car as Lincolns to strengthen the Lincoln name as a separate franchise within the division

"Our marketing strategy is to carve out three distinct images, a Mercury image, a Lincoln image and a Merkur image," he said.

OBITUARIES

K.E. (Gene) Staley, 80; retired GM, Chevy exec

BOCA RATON, Fla.—Kenneth Eugene Staley, a retired General Motors vice president and former Chevrolet general sales manager, died Sept. 23. He was 80.

Mr. Staley joined Chevrolet in 1929 and moved up through the sales ranks to become general sales manager in 1959. In that post, he set up Chevrolet's Owner Relations Program. In 1962 he was elected a GM vice president and was placed in charge of what was then the Distribution Staff. He retired in 1966.

William H. Graves, 87; Packard vice president

DETROIT.—William H. Graves, retired engineering vice president at Packard Motor Car Co., died at the age of 87.

Mr. Graves joined Packard in 1919 as a research chemist and later transferred to the metallurgical department, where he was credited with making major advances in plating and painting technology. In 1940, he was assigned to adapt the British Rolls-Royce aircraft engine to production by Packard. The task included changing material specs on 12,000 engine parts to American standards, simplification of high-alloy steels via heat treating and substitution for critical materials.

He was named executive engineer in 1945 and vice president of engineering in 1956. After Packard went out of business, he taught at the University of Michigan School of Engineering.

Marcus Guy Carpenter

DURHAM, N.C.—Marcus Guy Carpenter, retired president of Carpenter's Chevrolet, died Sept. 15. Mr. Carpenter was 87. Carpenter's has handled Chevrolet since 1915 and handled Ford and Dodge before that.

Porsche names Foster

RENO.—Porsche Cars North America has named Ron Foster director of business development. Prior to joining Porsche, he was a vice president at Cummins Ohio, Inc.

As U.S. auto competition grows torrid

More mergers, joint ventures due

Continued from Page 1

Chrysler Corp., will have capacity of one million units each. Japan's three largest auto makers—Toyota, Nissan and Honda—also will have capacity in North America and capacity in Japan aimed at North America amounting to one million units each.

Adding up the North American automobile capacity of the three domestics and three Japanese auto makers puts the total at 10 million units, only 1.6 million units less than what total car sales are expected to be in 1990.

But the six U.S. and Japanese biggies are not the only ones with eyes on North America.

The smaller Japanese auto companies were virtually shut out of the U.S. market by the Voluntary Restraint Agreement, leaving them with an overabundance of unused capacity in Japan. They aren't about to be caught by protectionism again. They, too, have plans for North American production.

Based on present plans, Japanese companies will have 1.4 million units of car production capacity in the U.S. by 1990.

Further, Japan's auto makers, now running at 85 percent of capacity at home, will be pressured even more to find a place to sell their domestic production as sales in their home market slow.

The most recent World Outlook again has downgraded forecasts for car sales in the Japanese market. While domestic sales will rise only about 8 percent by 1990, domestic production will rise 15 percent by 1990 to 8.2 million units.

In addition, the European prestige companies which have enjoyed phenomenal success in sales and profits in the U.S. during the recent boom, have plans to hike capacity. Saab, Volvo, BMW and Mercedes-Benz have planned substantial capacity increases.

Hammond suggested that if the European companies can't find a market at home for the extra capacity, they will surely look to the U.S.

There also will be the newcomers to the U.S. market, most notably the South Koreans. Hyundai also has North American production plans.

Simply put, there are not enough car sales to go around.

The situation could be worse if the more-pessimistic predictions for car sales by 1990 prove to be accurate. The Arthur Andersen & Co. Delphi study of the automobile industry, for example, puts 1990 sales at 10.5 million units. The Delphi survey is based on responses of vehicle manufacturing and auto supplier executives.

• Previous World Outlooks further showed the Japanese will be the beneficiaries of any increased sales in the U.S. (Automotive News, April 29, 1985). Toyota is expected to enjoy a 10-percent increase in U.S. sales by 1991; Nissan will have a 20-percent increase; Honda, 56-percent.

Hammond looks across the Atlantic to Western Europe for a glimpse of what the future will bring to the North American motor vehicle market of the 1990s.

Collectively, Western European auto companies have lost money for six straight years. Though individual companies have improved their financial condition somewhat, there appears no end in sight to the losing trend.

The five major manufacturers continue to have virtually equal market shares. "Each is in a position to be an industry leader," Hammond said. "They have huge capacity so they are prepared if the market swings their way. But that causes huge fixed costs."

The European manufacturers now are faced with what North American manufacturers will be faced with in the 1990s, Hammond said. They must decide if they should shed capacity and become profitable or tough it out, sacrificing short-term profits in hopes that the market will pick up and swing their way.

Hammond sees a solution in the avenue that Ford and Fiat apparently have chosen in Europe. The companies are discussing some sort of cooperative effort that has not yet been detailed.

U.S., Japanese and South Korean manufacturers already have complicated entanglements in terms of equity positions and joint ventures. However, a Chrysler-Mitsubishi partnership, for example, may not create a big enough entity to do battle in the 1990s environment, Hammond said.

Golden Oldsmobile opens in Florida

Harry E. Spyies cuts the ribbon for Golden Oldsmobile, Port Richey, Fla. Witnessing are Dennis D. Higginbotham, left, financial investor, and John A. Martabano, Oldsmobile zone manager.

Taurus priced at $9,645; Sable starts at $10,700

Continued from Page 2

the impact of the latest Taurus/Sable delay on Ford Motor's hopes of capturing 20 percent of the U.S. car market in 1986.

"We'll have extremely good stocks as we enter the new year, both on Taurus and Sable and on Aerostar," he said. "So we will have a lot of guns firing."

Ford and L-M dealers have shown early enthusiasm for the new intermediates, according to Lataif. He said retailers have already ordered more than 75,000 units and the company expects to have 110,000 orders on hand by the time the cars are publicly introduced.

Ford is aiming at sales of about 550,000 Taurus/Sable models during the 1986 calendar year. Rewey projected sales of 375,000 to 400,000 for Taurus and about 150,000 for Sable.

Rewey said the "national planning mix" is 70 percent sedans and 30 percent weagons, but he added, "On the West Coast and the East Coast, I think the wagon could be 40 percent or more."

Lataif last week predicted 1986-model-year car sales of 10 million units and truck sales approaching the record 4.6 million sold in the 1985 model year. He forecasted sales of more than 2.0 million Ford, Mercury and Lincoln cars, improving the company's market share from 19.7 percent during the 1985 model year to about 20 percent.

He predicted sales of 1.3 million Ford trucks, boosting the company's market share from 27 percent to about 30 percent. Officials are aiming at 13 percent of the car market for Ford Division and 7 percent for Lincoln-Mercury.

Johnson promoted

COVENTRY, England.—Jeffrey Johnson has been named managing director of Austin Rover Deutschland GmbH. He had been Austin Rover's director of fleet operations since 1982.

Prices increased $373 on U.S. cars for '86

Continued from Page 1

Co., $350; Chrysler Corp., $320; American Motors, $208; Volkswagen, $107; Nissan, $50, and Honda, $562.

The $373 average for the domestics is sales-weighted on the share of the domestic market held by each manufacturer.

The Honda figure is much higher than the full-line boost of $387 announced by the company. That is because Accord, the only Honda built in this country, is all-new for 1986 and bears the brunt of the company's increase. Honda's imported models are up considerably less than the $387 average.

Chrysler and AMC completed the domestic pricing derby last week. Chrysler's hike is estimated at $320; AMC's at $208 for the combined Renault Alliance-Eagle and AMC Eagle lines.

Chrysler's price announcement followed the obfuscatory line originated by GM and then adopted by Ford. Each of the Big Three refused to put a dollar figure on their 1986 boost. They divulged only percentage hikes—3 percent for GM, 2.9 percent for Ford and 2.7 percent for Chrysler.

By means of a simple mathematical procedure, Automotive News determined that Chrysler's bump was $320. As noted, GM's was $400 and Ford's was $350.

Chrysler's dealer discounts and destination charges are unchanged for 1986. So are GM's and Ford's.

Chrysler's $320 average hike is for comparably equipped 1986 and 1985 models. That means the company added the price of any options made standard to the 1985 price before making its comparison and arriving at its announced 2.7 percent hike. GM and Ford did the same.

On a straight sticker-to-sticker basis, the increases for each of the Big Three are substantially higher than those announced.

Chrysler did not provide a rundown on equipment made standard for 1986, but there apparently was a lot of it.

For example, a Dodge Daytona coupe is $9,013 for 1986, an increase of $508. Chrysler said it's *down* $132 on a comparably equipped basis. The Plymouth Caravelle SE four-door sedan is $9,810, a boost of $803. Comparably equipped, it's up $310, Chrysler said.

The Plymouth Turismo/Dodge Charger coupe jumped $198 to $6,782, but the comparable figure was put at $119. The Plymouth Reliant SE/Dodge Aries SE four-door sedan is up $319 at $7,758. Comparably equipped: Up $139.

AMC was the only one of the four "native" U.S.manufacturers to provide a complete rundown on its price changes. AMC supplied a pecentage increse, a dollar increase and model-by-model prices of its 1986 cars.

Renault Alliance and Encore rose an average of $193, or 2.4 percent, on a comparably equipped basis, and the Eagle four-wheel-drive passenger car climbed $358. Automotive News combined Alliance-Encore and Eagle on a sales-weighted basis and placed a hike of $208 on the full AMC car line.

The base Allliance two-door sedan went up only $4, to $5,999, but that was partly the result of a cut of one percentage point in the dealer discount (from 10 percent to 9 percent).

Other Alliance two-door and four-door sedans rose $110. Alliance convertibles climbed $262.

The base Encore two-door hatchback has been dropped, and other Encore two-door and four-door hatchbacks jumped $350 (S series), $250 (LS series) and $408 (GS series). The lowest-priced 1986 Encore is $6,960.

Eagle prices are: Four-door sedan, $10,719 (up $262); four-door wagon, $11,489 (up $362), and Limited four-door wagon, $12,179 (up $286).

Destination charges were increased on all lines except Alliance, which stays at $358. Encore's destination charged was hiked $22 and now is the same as Alliance's. Destination charges on other lines went up $8 to $12.

Third-quarter total best since '77

September output rises 15 pct.

U.S. auto production for September—637,004 units—was up 15.26 percent from August's 552,673 and was 17.57 percent better than the 541,792 cars built last September.

Third-quarter output of 1,808,215 cars was 11.36 percent higher than last year's 1,623,724 for the corresponding period and was the best third-quarter build since 1977, when 1,966,345 cars were assembled.

Last week's estimated auto production of 179,335 units was up 5.67 over the previous week's 169,716 and was 7.78 percent higher than the year-ago week's 166,395.

So far this year, 6,360,585 cars have been assembled, 5.07 percent more than the 6,053,887 built last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 58.08 percent; Ford Motor Co., 19.16 percent; Chrysler Corp., 16.62 percent; American Motors, 1.53 percent; Honda of America Mfg. Co., 1.43 percent; Volkswagen of America, 1.31 percent; New United Motor Mfg., Inc., 1.06 percent, and Nissan Motor Mfg. Co., U.S.A., 0.81 percent.

GM scheduled Saturday (Oct. 5) overtime at the following plants: Arlington, Tex.; Doraville, Ga.; Framingham, Mass.; Lakewood, Ga.; Pontiac (G line), and Lordstown, O.

Ford has daily overtime scheduled this week (Oct. 7) at its plants in Chicago; Dearborn; Edison, N.J.; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Saturday (Oct. 12) overtime is scheduled for Ford's plants in Dearborn, Edison, Wayne and Kansas City.

Saturday (Oct. 5) overtime was scheduled for Chrysler plants in St. Louis (Nos. 1 and 2).

The plants in St. Louis and Newark, Del. are slated for daily overtime this week.

Production of the front-wheel-drive Oldsmobile 88 began Sept. 30 at GM's Willow Run (Mich.) and Wentzville (Mo.) plants.

Hoglund makes it emphatic: No import in Saturn plans

By Michelle Krebs
Financial Editor

TROY, Mich.—William E. Hoglund, president of General Motors' Saturn Corp., denied that Saturn plans to import cars from GM's overseas subsidiaries for sale through its dealers.

"We are not talking to offshore companies," Hoglund said last week at the dedication of Saturn's corporate headquarters here.

Published reports had quoted GM Chairman Roger B. Smith as saying GM was considering importing cars from its subsidiaries in Europe and Brazil to round out the product line for Saturn dealers.

Building an all-American car to compete against Japanese imports is the principal objective of Saturn, Hoglund said, as hundreds of red, white and blue balloons were sent into the air from the top of Saturn headquarters and American marching band music played over the public address system.

However, Hoglund refused to give a hint as to what else, aside from the Saturn line, Saturn dealers would be provided with.

"That's four years away. I'm not going to talk about marketing plans," Hoglund said.

Hoglund also said a second Saturn plant would not be built until the first one was running smoothly. "We're concentrating all of our efforts on getting the job done in Spring Hill (Tenn.). We're not even thinking about a second plant now," he said.

Smith said Saturn would add a second plant when it sells the capacity of the first. "I hope we'll need a second plant . . . We have to see a few more cars before we're willing to make our bet," Smith said.

Smith said GM needs a million cars for at the bottom end of the market. Saturn will provide half that number.

Truck production for 3rd quarter best since '78

Third-quarter domestic truck production of 824,514 units was 14.38 percent more than the 720,846 for the corresponding period last year and was the best third-quarter output since 1978 when 856,513 units were assembled.

The makers' September build—290,990 units—was down 1.39 percent from August's 295,090, but was 20.39 percent more than last September's 241,698.

Scheduled production of 74,167 trucks last week was 1.96 percent more than the previous week's 72,738 and 17.43 percent better than the year-ago week's 63,161.

So far this year, 2,654,815 trucks have been assembled, 10.51 percent more than the 2,402,286 built last year at this point.

Saturday (Oct. 5) overtime was scheduled at General Motors' plant in Lordstown, O.

Ford Motor Co. has daily overtime scheduled this week (Oct. 7) at these plants: Kansas City; Louisville; Lorain, O.; Wayne, Mich., and Norfolk.

Saturday (Oct. 12) overtime is slated for the Ford plant in Kansas City.

Chrysler Corp. has scheduled two nine-hour daily shifts this week at its Warren (Mich.) plant.

Canadian cars set record for third quarter

Third-quarter production of 246,760 cars in Canada was up 18.57 percent from last year's 208,118 and was a record for the period.

September output of 91,513 cars was 4.29 percent more than the 87,752 units built in August and 28.73 percent more than the 71,087 cars assembled in September, 1984.

It was the highest September production since 1978 when 100,598 units were built.

Estimated car production of 25,168 last week, was 26.53 percent more than the previous week's 19,891 and 13.69 percent more than the year-ago week's 22,138.

So far this year, 812,736 cars have been assembled, 0.62 percent below the 817,845 built at this point last year.

The September truck total of 72,633 was a record. It was 27.57 percent more than the 56,934 trucks built in August and 4.63 percent more than the 69,421 units built in September, 1984.

Third-quarter truck production of 180,657 also was a record. It was 1.81 percent above the 177,442 units built in September, 1984.

Last week's estimated output of 18,439 trucks was 6.24 percent ahead of the previous week's 13,710 and 11.54 percent more than the year-ago week's 14,683.

Year-to-date, 658,222 trucks have been assembled, 5.96 more than the 622,138 units built last year at this point.

American Motors' plant in Brampton, Ont., was closed last week for inventory adjustment.

Stock falls to 13-year low with 36-day car supply

By Arthur Flax
Automotive News Staff

Incentives gobbled up inventories of new domestic cars in September, driving the industry to the lowest days-supply count in almost 13 years.

On Oct. 1, the days' supply of new domestic cars stood at 36, a figure unmatched since Nov. 1, 1972, and unbeaten since Sept. 1, 1972, when the days' supply was 35.

There were 1,242,071 new domestic cars in stock on Oct. 1 at factories and dealerships and in transit to dealerships. That was the lowest total since Nov. 1, 1933 when there were 1,224,092 units in stock.

The new model year starts Oct. 1, and inventories of new automobiles traditionally drop in the autumn. But incentives have seldom been as successful in clearing stock as they were this year.

The incentives—7.5 or 7.7 percent financing—ended Oct. 2. However Ford Motor Co., General Motors and American Motors are offering new finance incentives of 8.8 percent on selected models.

The ideal days' supply is generally considered to be 50 days.

The industry's 36-day supply on Oct. 1 was 15 days lower than the 51-day figure on Sept. 1. On Oct. 1, 1984, it was 54 days.

Of 76 nameplates, only seven had a higher days-supply figure on Oct. 1 than on Sept. 1. Fifty-two nameplates were below 50 days' supply.

• Nissan trimmed its days' supply of domestic-built cars the most of any manufacturer last month, followed by Ford, AMC, Chrysler, GM, Volkswagen and Honda.

Nissan's supply dropped 25 days. Other declines were: Ford, 21 days; AMC, 16 days; Chrysler, 14 days; GM and VW, 13 days, and Honda, 3 days.

Ford had the lowest days' supply of the Big Three manufacturers, with 26.

The Oct. 1 unit count was divided this way by maker: GM, 57.70 percent; Ford, 19.95 percent; Chrysler, 17.32 percent; AMC, 3.30 percent; VW, 1.19 percent; Nissan, 0.33 percent, and Honda, 0.21 percent.

On Sept. 1, the breakdown was: GM, 56.45 percent; Ford, 23.05 percent; Chrysler, 15.81 percent; AMC, 2.92 percent; VW, 1.17 percent; Nissan, 0.38 percent, and Honda, 0.22 percent.

By market class, the latest stockpile was divided this way: Subcompact, 18.34 percent; compact, 21.03 percent; intermediate, 35.89 percent; standard, 11.11

Corvette will lead the way

A Corvette convertible will be the pace car for Indy 500 May 25. It is the seventh time a Chevrolet has been chosen, and Chevy says this will be the first "street-legal" Indy pace car since 1978 when another Corvette led the pack. The Corvette ragtop, the first since 1975, will be introduced in March.

Why Ford-Fiat deal failed
Page 2

Dealers expect another strong year

'86s overcoming sluggish launch

By Richard Johnson
Detroit Reporter

The lapse of 1985 year-end incentives and sporadic supply of new 1986 cars has apparently gotten the new model year off to a lackluster start.

An Automotive News check of dealers around the country turned up reports of slow traffic since the 7.7 and 7.5 percent finance deals ended and 1986 models took center stage in October.

But by late last week, there were signs of brisker retail business. Another round of finance deals was apparently pulling more people into showrooms and more 1986 models were reaching dealerships. Overall, dealers sampled expect another strong year for the industry, though many believe finance incentives will continue to play a big marketing role.

The phenomenal success of cut-rate financing in late August and September left carryover stocks unusually low, putting some dealers in a supply squeeze while waiting for 1986 models to roll in.

In addition, some all-new products for 1986, including Ford Taurus/Mercury Sable, Cadillac Eldorado and Seville, Oldsmobile Toronado Delta 88 and Buick Riviera and LeSabre won't debut until later in the year—stealing some excitement from the traditional intro period.

"We're not off to a real good start," said Willie Starks, general manager, Peninsula Pontiac, Torrance, Calif. "But we hope to be doing great by the end of the month."

"Business fell off as soon as the 7.7 ended, but it is starting to come back," said John Criscione, general manager, Fruitrich Cadillac-Olds, Bridgeport, Conn.

"There was a big decline after the 7.7," said Payton Wells, a Chevrolet dealer in Indianapolis. "Now, they are starting to come back since they put on the other limited incentives."

General Motors, Ford Motor Co. and American Motors last week announced 8.8-percent financing on certain 1985 and 1986 cars and trucks—offers good through late November. But dealers queried by Automotive News last week seemed uncertain about the impact of the new loan deals.

"I'm not sure if the 8.8 is going to help," said Starks. "I don't know what is going to happen once customers get through some of the fine print."

"Manual transmissions didn't light our fire," said John Megel, general sales manager, Hub Ford, Atlanta, referring to Ford's offer, which applies to 1985 and 1986 Escort, Lynx, Tempo and Topaz models equipped with manual tranmissions. "But we're going to keep an open mind and try to move vehicles."

Megel, who reported a sharp drop in business after the broad 7.7 APR incentives came off, said cut-rate financing has become a

Service Index shows gains in all areas

By Jack Walsh
Service Editor

August service and parts volume reported by the nation's franchised new-car and truck dealers was stronger than in the same month a year ago, with good gains in all areas of the business.

During the month, according to the Automotive News Service Index, shop volume was 6.9 percent higher than in August, 1984. Through August, business was up 8.3 percent over the first eight months a year ago.

In August, the leading indicator was total labor sales, customer-paid and warranty, with an increase of 9.8 percent over the total for the same month a year earlier.

There was a gain of 6.8 percent in August sales of parts and accessories to outside customers, while gross profit on all labor, parts and accessories sales—the most important indicator in the dealer's view—showed an increase of 6.5 percent over last year.

Sales of all parts and accessories during the month were 6.3 percent higher than a year ago, and the number of repair orders written, customer-paid and warranty, was up 6.2 percent. Sales of shop parts, those used in customer-paid and warranty repairs, were 5.7 percent higher than in 1984.

For the first eight months of the year, the biggest increase in vol-

Negotiators tackle parity, outsourcing, work rules, job classifications

Chrysler and UAW near deadline

By Mary Connelly
Detroit Reporter

As Tuesday's contract expiration date nears, negotiators for the UAW and Chrysler Corp. are tackling the union's chief demands of wage and benefit parity and limits on outsourcing and the company's push for greater productivity through changes in work rules and job classifications.

The Chrysler-UAW pact, covering approximately 70,000 hourly and salaried employes in the U.S., expires at 11:59 p.m. Tuesday (Oct. 15). At presstime, the UAW had not set a strike deadline in the U.S., but workers at St. Louis Assembly II have notified Chrysler they will strike if local issues are not resolved when the contract expires.

An economic proposal presented by Chrysler to the union last week did not address the issue of curtailing outsourcing, one of the UAW's chief demands. However, Thomas W. Miner, Chrysler industrial relations vice president, termed the issue "critical" and said late last week that the company would respond to the union demand.

The UAW has demanded that Chrysler curtail the practice of using outside suppliers when the union can demonstrate that the job can be done as efficiently and economically within the corporation. The union also wants the return of work supplied by non-UAW members at outside firms.

Chrysler's economic proposal, which both sides declined to detail, was designed to achieve "a more efficient company" and reduce the "current competitive cost disadvantages" in developing small vehicles, Miner said.

Chrysler's main thrust throughout the negotiations has been alteration of work rules and job classifications, which the company maintains will yield greater productivity and efficiency.

Chrysler earlier proposed trimming the number of job classifications from 500 to approximately six.

While the UAW has sought greater job security for its members through "insourcing" or returning jobs to Chrysler, Chairman Lee A. Iacocca said last week that increased productivity is the basis of job security.

"On one side, you have the money factor and the security factor, and obviously we've got to address both those issues," Iacocca said.

"On the other side, we can't talk security, certainly, without getting more productive in our plants against the Japanese or even other manufacturers around the world because productivity and quality go hand in hand. Without them, we're dead."

Miner said he did not anticipate movement on the "complex" job classification issue until the final days of negotiations. The UAW fears it may lead to loss of jobs.

"We're willing to step up to the cost involved in the consolidation because there are efficiencies that will more than pay for the costs," Miner said.

In presenting its economic proposal to the union last week, Miner said the package would boost productivity and help control costs. Chrysler is trying to narrow the cost advantage of Japanese auto companies in the small-car segment which some analysts peg at $2,500 a vehicle.

However, UAW President Owen Bieber termed Chrysler's initial economic proposal "woefully inadequate."

He said it did not bring Chrysler workers to parity with those at General Motors and Ford Motor Co. in terms of benefits or timing.

While Bieber did not elaborate, one area of contention is pension parity for Chrysler retirees.

The UAW is trying to recoup pension dollars lost during Chrysler's fight for economic survival. The company, however, has maintained that its pension bill is proportionately greater than that at GM or Ford because it has fewer active workers per retiree or surviving spouse.

Chrysler's response to the UAW's demand for wage parity was not disclosed. However, Chrysler workers currently earn

Ephlin addresses GM board

In a first-ever union presentation to the General Motors board of directors, UAW Vice President Donald F. Ephlin, seated left, outlined ideas for broadened information sharing with UAW-represented GM employes. Ephlin, director of the union's GM Department, is shown with GM Chairman Roger B. Smith, seated center; GM President F. James McDonald, standing left, and board members Robert S. Hatfield and Catherine B. Cleary.

Caldwell retiring; Ford promotes Gilmour, Pestillo

DEARBORN.—Will M. Caldwell, Ford Motor Co. executive vice president and chief financial officer, will retire at the end of this year, and Allan D. Gilmour has been chosen to replace him, effective Jan. 1, 1986.

Peter J. Pestillo will succeed Gilmour as vice president—employe and external affairs. Pestillo currently is vice president—employee relations.

Caldwell, 59, also will retire from Ford's board of directors. He has been with the company since 1952. He was elected an executive vice president in 1979 and was appointed chief financial officer at that time.

Gilmour, 51, joined Ford in 1960 and was president of Ford Motor Credit Co. from 1975 to 1977. He was corporate controller when he was named to head employe and external affairs in 1984.

Pestillo, 47, joined Ford as labor relations vice president in 1980, coming from B.F. Goodrich Co., where he was employe relations vice president. He became Ford employe relations vice president last January.

Ford and AMC follow GM's lead

New incentives pegged at 8.8 rate

By Edward Lapham
Marketing Editor

It started again last week. General Motors, anxious to secure the calendar-year truck sales crown and boost its CAFE rating for cars, launched a new 8.8-percent finance incentive program.

Ford Motor Co., in order "to protect" its dealers, followed suit, as did American Motors.

Chrysler did not respond. Sources there said the company is taking a "wait-and-see position" pending the outcome of contract negotiations with the UAW.

The Chrysler-UAW national agreement expires tomorrow (Oct. 15), and the company faces a possible strike-caused shutdown.

The GM program, which had been rumored to be in the works for more than a week, is designed to clear out remaining 1985 models that were not depleted by the 7.7 APR program which ended Oct. 2.

In order to boost truck sales in the race for the crown, GM extended the 8.8-percent GMAC program to 1985 Chevrolet S-10 and Blazer units plus GMC S-15 pickup and Jimmy models sold from dealer stock from Oct. 7 through Nov. 20. Two-wheel-drive and 4WD versions are included.

Also included in the newest incentive are 1985 Oldsmobile Toronado, Buick Riviera and Cadillac Seville and Eldorado models delivered from dealer inventory from Oct. 7 through Nov. 13. The 1986 replacements for those models go on sale in mid-November.

In order to improve its CAFE, GM extended the 8.8 program to both 1985 and 1986 manual transmission models of Chevrolet Chevette, Cavalier and Camaro and Pontiac 1000, Sunbird, Fiero and Firebird bought from dealer stock or ordered during the incentive

Chrysler to purchase 3rd finance company

By Michelle Krebs
Financial Editor

Chrysler Corp. has agreed to purchase a finance company from BankAmerica Corp. for $405 million. The purchase represents Chrysler's third and largest investment in the financial services industry in recent months.

FinanceAmerica is a diversified finance company involved in consumer lending, "brand name" wholesale financing for manufacturers and distributors and small business lending.

FinanceAmerica consists of two subsidiaries, FinanceAmerica Corp. and BA Financial Services Corp. It earned $15.8 million in 1984 and is on the way to increasing 1984's profits. In the first six months of 1985, the company made $9.9 million and had total assets of $2.8 billion as of June 30.

Headquartered in Allentown, Pa., the company has 2,100 employes with 267 offices in 42 states.

Chrysler Chairman Lee Iacocca said the acquisition of FinanceAmerica's non-automotive services and other finance capabilities will make Chrysler Financial Corp., under whose umbrella FinanceAmerica will fall, a more independent company with potential for significant growth and profitability.

Iacocca said the acquisition puts Chrysler "in the heart of the consumer finance business."

Since last spring, Chrysler Financial has acquired E.F. Hutton Credit Corp., now known as Chrysler Capital Corp., for about $150 million.

Located in Greenwich, Conn., and with 28 offices throughout the U.S., the company is a diversified equipment finance company engaged in commercial lending and leasing nationwide. Its gross finance receivables and operating leases amounted to $1 billion as of March 31.

Chrysler Financial also formed a joint venture with General Elec-

But they agree it's a land of opportunity

Ford and AMC differ on China

No deal near, Halstead says

By Richard Johnson
Detroit Reporter

Despite a recent, well-publicized round of joint-venture talks between Ford Motor Co. officials and the Chinese, no deal appears imminent because Ford executives aren't yet convinced that China can achieve its ambitious industrialization objectives.

In addition, Ford Vice President Lindsey Halstead cited the lack of labor flexibility in China as a complicating factor.

"We're very reluctant to make a commitment that we aren't very confident can be achieved," said Halstead in an interview with Automotive News. "That is going to be one of the big gaps, I think."

In early August, Halstead conducted "exploratory talks" with Chinese Vice Premier Wan Li in Beidaihe in northeast China. Halstead visited the country at the invitation of China National Automotive Industry Corp., and the discussions centered upon a possible joint venture involving production of light trucks.

"I went to get some first-hand knowledge of just what the Chinese were interested in in terms of an automotive industry development," he said.

"It is clearly a very, very big potential future market. We continue to talk with them. We haven't any specific program that we're very close to reaching any decision on, but I was able to get kind of a view of what they were looking for."

Halstead said he hasn't returned to China since the August meetings, but he held out the possibility of returning at "some time in the future."

"It remains unclear at the moment whether we could put something together that is compatible with their desires," he said. "They have some very, very ambitious desires in terms of the development of their industry."

Halstead said the two sides discussed "a variety of ways of how they would see the development program." He also queried Chinese officials about their policies

Beijing 4WDs sought for U.S.

By Richard Johnson
Detroit Reporter

The board of directors of Beijing Jeep, American Motors' joint venture in China, has approved an aggressive investment program aimed at quickly increasing local content to allow AMC to bring various stampings and pieces into the U.S.

But beyond using its two-year-old China venture as a base for the Far East and a low-cost supply source for North America, AMC Executive Vice President Joseph Cappy acknowledged a long-term goal to export finished vehicles to the U.S.

"Absolutely," said Cappy during an interview with Automotive News. "That's the whole reason for our involvement there. What you're seeing now is the Koreans and Taiwanese coming in and kind of usurping the Japanese. Well, the Chinese are going to come, and they're the ones that are right behind the Koreans.

First of the '86s built at Ford's Edison plant

Ronald G. Wallace, right, manager of Ford Motor Co.'s Edison (N.J.) assembly plant, and Earl D. Nail, president of UAW Local 980, exchange congratulations following inspection of the first 1986 car built at the plant, the new Ford Escort GT. The Edison plant has 1,500 employes and assembles the Mercury Lynx as well as the Ford Escort.

Dealers expect another strong year

'86s overcoming sluggish launch

Continued from Page 1

necessary marketing implement, at least for the time being.

"People are expecting APR incentives and it is going to be hard to get them off that," he said. "We're definitely going to need it starting into the year and then gradually work our way off it."

"I expect Chrysler will follow suit very soon," said Nick Cassetta, general manager at Sarasota Chrysler-Plymouth, Sarasota, Fla. "But I'd like to see things get back to normal. I'd like to see people come in and buy a car because they want to buy a car."

"I have to say it was awful nice to have people begging us for cars," said Diane Waller, Waller Buick, Nashville. "It was nice to say, 'If you don't take it someone else will.' But right now, we really don't need them on anything until the inventory builds up some."

Dealers usually rely on some carryover units to bolster stocks while waiting for a steady supply of new-model-year vehicles. But the seven-week manufacturer sales blitz has made 1985 holdovers sparse.

"Because of the 7.7, carryover '85s ran out a little faster than normal," said Dennis Marquitz, general manager of Lou Fusz Pontiac, St. Louis. "It left us a little short of product."

"The 7.7 cleared us right out of '85s," said Charles Jordan, sales manager, Jim Skinner Ford-AMC, Birmingham, Ala., who cited a "very bad" inventory of 1986 models with the exception of Jeep.

"Generally, we would have a little better inventory than we have now," added Megel.

"We don't have all the models we're looking for," said Starks. "They're in the order bank, but we don't have the inventory right now."

The supply shortages are causing some dealers to hold off on pronouncements about the new model year.

"Our business has been brisk, but it is no test of any kind," said Charles Betts, Betts Cadillac, Des Moines. "We're still in '85s. I have less than six '86s on the lot."

Betts said the 7.7-percent late-summer finance rate "was a real hummer."

"That really broke the logjam for us," he said.

Since the incentives came off, there has been a limited amount of new product curiosity value to draw customers into showrooms. GM's new E-body models will not be unveiled until Nov. 14 and public sale of Ford's Taurus/Sable intermediates has been delayed until Dec. '6.

But Pontiac, Buick and Oldsmobile dealers surveyed last week said heads were turning for new four-door versions of the various N-body models, and Ford dealers cited interest in the Aerostar minivan.

Retailers almost unanimously said they detected little or no resistance to 1986 price stickers.

"I've been reading about sticker shock, but I haven't seen it," said Marquitz.

GM, Ford, AMC offering 8.8 loans on some models

Continued from Page 3

period.

The loans have a 48-month cap. To participate, dealers relinquish 70 percent of their income on the outstanding finance receivables. In addition, on the luxury cars and the S-10 and S-15 pickups, the carryover allowance is reduced from 5 percent to 3 percent.

The Ford program, an 8.8 APR Ford Motor Credit Co. incentive, includes 1985 and 1986 Ford Escort and Tempo models plus Mercury Lynx and Topaz models with manual transmissions purchased from dealer stock or ordered from Oct. 9 through Nov. 22.

And to keep its Ford dealers in the truck sales race, the company maker also extended the program to 1986 Ranger pickup and Bronco II models bought or ordered during the Oct. 7-Nov. 22 period.

Participating dealers relinquish a portion of the finance income. The loans have a 48-month cap.

Ford also offered a second-tier program to cover the few 1985 trucks in stock. During the period, Ford is allowing dealers $200 on carryover Ranger models and $250 on carryover Bronco II models. The division believes the allowances, combined with the 5 percent carryover rebates, will allow dealers to sell the 1985 models at a price comparable to 8.8 APR prices.

"We feel our program is a little better," said a Ford Division source. "We figure that because our dealers sell a higher percentage of cars with standard transmissions, about 20 percent of the cars our dealers sell are covered, compared with less than 10 percent for Chevrolet, for example."

The AMC program also is for 8.8 APR. It includes 1986 Renault Alliance and Encore models sold from Oct. 9 through Nov. 20.

The 8.8 APR rate is available on loans of up to 36 months. Loans of 37 to 48 months are available at 9.9 APR financing.

Gains charted in all areas of Service Index

Continued from Page 1

ume also was scored by total customer-paid and warranty labor sales, with an increase of 10.8 percent over last year.

The number of repair orders written showed a gain of 8.6 percent through August, while gross profit on all labor and P&A business was 8.5 percent higher than a year ago.

Shop-parts volume for the eight months was up 8.1 percent, P&A sales to outside sources was 6.6 percent higher and all P&A sales showed an increase of 5.7 percent over those in the like period in 1984.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's franchised new-car and truck dealerships.

SERVICE INDEX
106.9★

	August, '85 vs. August, '84	8 mos., '85 vs. 8 mos., '84
Gross Profit on All Labor and P&A Sales	+6.5%	+ 8.5%
Repair Orders Written	+6.2%	+ 8.6%
Total Labor Sales (Customer & Warranty)	+9.8%	+10.8%
Shop Parts Sales (Customer & Warranty)	+5.7%	+ 8.1%
Sales of All P&A	+6.3%	+ 5.7%

★—Survey by Automotive News shows that dealers' service and parts business in August, 1985, was 106.9 percent of business in August, 1984. Service business in the first eight months of 1985 was 108.3 percent of business in the corresponding period in 1984.

OBITUARIES

J.R. Davis, 90; held top sales posts at Ford

LEXINGTON, Ky.—J.R. (Jack) Davis, a former sales vice president of Ford Motor Co., died here Oct. 8 at the age of 90. He had retired in 1957.

Mr. Davis joined the Sales Division of Ford in 1919 and was named assistant general sales manager five years later. He was appointed general sales manager in 1937 and in 1939 was named Western regional manager. He became director of sales and advertising in 1944.

He also served as vice president in charge of Ford tractor and international operations and was chairman of the Product Planning Division. He was a director from 1945 until he retired.

Chrysler agrees to purchase 3rd finance company

Continued from Page 3

tric Credit Corp. to engage in third-party financing. Called CGE Associates, the venture finances machinery, equipment and real estate for third parties. Terms of the deal were not disclosed.

Chrysler is not alone in its investments in the fast-growing financial services industry. General Motors and Ford Motor Co. also have made investments in an effort to diversify from the cyclical automotive industry which faces slower future growth.

In the past year, General Motors Acceptance Corp. purchased a group of mortgage companies around Philadelphia and the mortgage servicing business of Northwest Corp., Minneapolis. The acquisitions make GMAC the nation's second largest provider of mortgage financing.

Ford Motor Credit Co. announced in August that it paid $500 million for First Nationwide Financial Corp., the nation's ninth largest savings and loan association.

No deal with Chinese near, Ford's Halstead reports

Continued from Page 3

for setting up a domestic industry.

"They've imported a lot of cars this last year, primarily from Japan," he said. "But with the kind of crunch that whole opening process has put on their foreign exchange, I see that drying up.

"They're not going to be able to sustain that, and it is one of the fundamental issues that I discussed when I was there. It's fairly clear that they can't afford that kind of foreign exchange drain, so they're interested in developing a domestic industry and doing it very quickly and very aggressively."

Halstead said the Chinese program is similar to difficult and long-range domestic industry development strategies elsewhere in the world. But he said other countries have generally allowed more time to reach their goals.

"They would like sort of instant results," he said. "Whether or not the Chinese Government is going to be able to come up with the kind of assurances from their side and agreements that would be required to take on such an effort simply remains to be seen.

"Having gone through the local-content developments in Latin America, it's taken us a long time from scratch to get to 80 to 90 percent content levels and, of course, the Chinese would like to get to 100 and do it, say, in five years. I don't believe it's quite possible to get there and produce quality product."

A primary problem, he said, is achieving the flexibility of labor needed for efficient production.

The Chinese Government now imposes restrictions on management, such as assignment of labor by the state and prohibitions on moving employes.

"You don't have free movement of employment, and it's a problem for us," Halstead added. "You'd have to be able to select and be able to become productive in order to make a go of an enterprise in China.

"And that's one of the other complicating factors of entering China. You're going to have to come to some agreements with the Chinese Government because traditionally you have restrictions, like you can't move labor around."

GM chief has joined one

Smith, Bieber support health-care alternatives

By Mary Connelly
Detroit Reporter

General Motors Chairman Roger Smith did it. And he wants others in the automotive industry to do it, too.

Smith has joined a PPO, a preferred provider organization for health-care delivery.

He maintains that alternatives to traditional health care such as PPOs and health maintenance organizations (HMOs) save money and deliver quality health care.

Smith and UAW President Owen Bieber, speaking to a gathering of business, labor and health-care providers in Detroit, supported alternatives to traditional health plans.

Citing the need to tackle the nation's health-care bill, which is nearly $400 billion annually, Smith said:

1. General Motors' health-care benefits cover over two million people, including 567,000 employes, employe dependents, 280,000 retirees and surviving spouses. That represents about one percent of the total population of the U.S.

2. GM's health-care costs of $2.3 billion in 1984 were almost four times greater than the company's health-care bill in 1974.

3. Health care represents about 40 percent of the total employe benefit cost at GM.

4. GM employes are about five years older on average than their national counterparts. The older work force, coupled with a large number of retirees, produces a bigger medical bill, Smith said.

Bieber said the UAW has formed joint committees with several employers, including GM, to explore alternatives to traditional health care.

Declaring that the UAW was among the "first pioneers" in the 1950s and 1960s to promote competition to the fee-for-service system of health care, Bieber said, "HMOs saved millions of dollars in premiums, while they provided quality health care.

"HMOs have played a major part in causing the recent reduction in the inflation trend of health care, the reduced hospitalization, the shorter length of stays, and even some insurance premium freezes or reductions," Bieber said.

Smith called HMOs and PPOs "one of the most promising ways to contain costs." He said GM records show those covered by traditional health insurance spend more time hospitalized than participants in HMOs.

"GM could potentially save the cost of more than half a million hospital days each year if everyone were in managed care," he said.

Bieber cautioned, however, that UAW support of health-care alternatives was not a "blank-check approval."

He said the more than 100 HMOs and 20 PPOs approved for use by UAW members are reviewed by the union. The plans are checked for fiscal viability, scope of benefits, competency of the management, training of the medical staff, record keeping, consumer orientation and other items, Bieber said.

The UAW president also cautioned against "proliferation" of alternative plans in a service area, claiming that "dilutes real competition with the standard fee-for-service delivery."

Bieber also said the UAW is "concered and disturbed with the rapid development and expansion of for-profit HMOs and PPOs."

"We have successfully resisted such efforts in Michigan and our position is well known in the national arena," Bieber said.

"It is our agenda to hold the line on health-care inflation trends. That is not the agenda for many for-profit plans."

In April, GM began offering employes a health-care program called the Informed Choice Plan. Employes may opt for traditional coverage, a PPO or an HMO.

In Michigan, about 33 percent of GM's active salaried employes and 27 percent of hourly employes chose an HMO or PPO, Smith said. Nationally, 29 percent of GM's salaried workers and 23 percent of hourly workers participate in alternative plans, he said.

Beiber said about 20 percent of all UAW members at Ford Motor Co. in Michigan use alternative plans and about 10 percent of UAW members at Chrysler Corp. have HMO coverage. Ford, he said, saved $7 million in premiums last year.

"The bottom line is that HMOs have been an excellent buy for the employers and our members," Beiber said.

The Conference on Alernative Health Care Delivery Systems was sponsored by the Economic Alliance for Michigan, a statewide business and labor coalition, in cooperation with Southeast Michigan business, labor and health planning organizations.

Alabama independents elect Morris president

BIRMINGHAM, Ala.—Charlie Morris, Morris Motor Co., Tuscumbia, Ala., has been elected president of the Alabama Independent Automobile Dealers Assn.

Other officers elected at the annual convention include: Connie Oswalt, Tuscaloosa, first vice president; Sam Folmar Jr., Ozark, second vice president, and Dave Ingram, Birmingham, secretary-treasurer.

Ex-state aide sentenced in Pa. odometer case

HARRISBURG, Pa.—Jose M. Torres, a former title examiner for the Pennsylvania Department of Transportation, was sentenced to six to 36 months in jail and fined $600 on charges of conspiracy and bribery involving more than $4,575 in the issuance of titles with false mileage readings.

Judge Herbert A. Schaffner imposed the sentence and penalty after Torres pleaded guilty in an odometer-tampering scheme investigated by a statewide grand jury.

The case reportedly involved used-car dealers in New York, Massachusetts and Pennsylvania who allegedly bought used cars in Canada and obtained titles from the Pennsylvania department showing fake mileage. The dealers then resold the cars.

The grand jury recommended charges against the dealers involved, but the state Office of the Attorney General has not yet brought any such actions.

According to Deputy Attorney General John Reed, Torres is expected to testify when charges are brought against the dealers.

Nissan to offer U.S. auto loans as securities

TOKYO.—Nissan Motor Co. plans to offer auto loans in the U.S. as two-year and four-year securities to investors.

By the end of this year, Nissan Motor Acceptance Corp. plans to issue $100 million worth of securities at an interest rate at 9 percent.

Calling them "Automobile Loan Bonds," Nissan said the move is aimed at avoiding risks of interest fluctuations and reducing fund-raising costs on a medium-term and long-term basis. It is also expected to allow Nissan to offer better loan terms to car buyers and dealers in the U.S. market, the company said.

General Motors Acceptance Corp. similarly plans to offer auto loans as securities by year-end. Some commercial banks already have done so.

'34 Ford Cabriolet revisited

Golden Age Auto Corp., Albion, Mich., has delivered the first '34 Cabriolet to Jim Hoekzema, Hoekzema Ford, Wayland, Mich. The reproduction of the 1934 Ford Cabriolet is built on Ford Ranger mechanicals and is sold exclusively through selected Ford and Lincoln-Mercury dealers.

Golden Age Auto builds '34 Ford Cabriolet replicas

ALBION, Mich.—Golden Age Auto Corp., which began producing and marketing reproductions of the 1934 Ford Cabriolet in June, has delivered its first '34 Cabriolet to Jim Hoekzema, Hoekzema Ford, Wayland, Mich.

Nelson R. (Skip) Turner, president and chief executive officer of Golden Age Auto, projects manufacture of 44 '34 Cabriolets in the first year of operations and not more than 550 units in any one year in the future.

Turner, who was a Ford Motor Co. engineer and has been in the auto reproduction industry for five years, said: "Our car is neither a 'neoclassic' nor a 'replicar.' The '34 Cabriolet falls somewhere in between."

Retail cost of the '34 Cabriolet is in the $30,000 to $35,000 range. Selected Ford and Lincoln-Mercury dealers will handle the cars.

The exterior of the '34 Cabriolet conforms to the styling of the original—a two-seat convertible with rumble seat—while present-day technology is found under the hood.

The chassis is based on the Ford Ranger suspension and drivetrain. The V-6 engine and automatic transmission are also from the Ranger. Also included are twin I-beam suspension, longitudinal rear springs, power rack and pinion steering, power disk brakes and reinforced fiberglass body construction.

The car's wheelbase is 112 inches; overall height, 65 inches; overall length, 186 inches, and overall width, 67.5 inches.

The interior of the '34 Cabriolet features an instrument panel of walnut or mahogany, tilt wheel, cruise control, power windows and an AM/FM/stereo cassette radio system with tilt axial speakers. Only four items are optional—a cellular telephone, a security system, leather interior and air conditioning.

Graves is silver

Ralph R. Graves, right, Graves Chevrolet, Williamsburg, Mass., receives a 25-year-dealer award from John C. Burrow, Boston zone manager.

Toyota, Hino to increase dealer networks in U.S.

TOKYO.—Toyota Motor Corp. and Hino Motors, Ltd., plan to beef up their dealership networks in the U.S.

Toyota reportedly will expand the number of dealerships from the current 1,080 to between 1,200 and 1,300 in two years to handle its planned production in the U.S.

Toyota also is expected to boost the ratio of dealerships handling its products exclusively from 60 percent to 70 percent.

By 1988, Toyota will be producing 250,000 cars in the U.S., 200,000 from a new plant yet to be built and 50,000 units from New United Motor Mfg., Inc., its joint venture with General Motors in Fremont, Calif.

Hino will boost the number of U.S. dealers handling its trucks from 50 to 85 by the end of the year.

Last year, Hino and Mitsui & Co., a major trading company, established a subsidiary, Hino Diesel Trucks (U.S.A.), Inc., Orangeburg, N.Y., to increase sales of Hino trucks.

Hino Diesel, the truck-selling subsidiary, expects to sign 35 dealers in more than 10 states not covered by dealers in its existing network.

Hino expects to export 1,500 units to the U.S. in the current fiscal year, up from the 580 the previous year. It is shooting for 5,000 sales annually by 1990.

The Hino move is a result of the increasing competition in the U.S. truck market. The latest entry is Nissan Diesel Motor Co., Ltd., which has signed an agreement to supply International Harvester with up to 3,000 diesel trucks annually.

Nissan Diesel also is establishing a dealer network to sell up to 2,000 trucks initially.

172,798 units scheduled

Auto production slips for week

Last week's estimated auto production of 172,798 units was down 1.13 percent from the previous week's 174,781.

Each of the Big Three as well as American Motors reported slightly lower production targets last week.

Last week's scheduled output was 6.93 percent more than the year-ago week's 161,605.

So far this year, 6,528,829 cars have been assembled, 4.99 percent more than the 6,218,728 completed last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 57.28 percent; Ford Motor Co., 19.21 percent; Chrysler Corp., 16.93 percent; Honda of America Mfg. Co., 1.69 percent; American Motors, 1.59 percent; Volkswagen of America, 1.36 percent; New United Motor Mfg., Inc., 1.10 percent, and Nissan Motor Mfg. Co., U.S.A., 0.84 percent.

Saturday (Oct. 12) overtime was scheduled for the following GM plants: Janesville, Wis.; Tarrytown, N.Y., and Detroit-Hamtramck.

Ford has scheduled daily overtime this week (Oct. 14) at the following plants: Chicago; Dearborn; Edison, N.J.; Wayne, Mich.; Wixom, Mich., and Lorain, O.

Ford plants in Chicago and Kansas City are slated for overtime next Saturday (Oct. 19).

Saturday (Oct. 12) overtime was scheduled at Chrysler's Newark (Del.) assembly plant.

Ford's Atlanta plant, which had been closed since May for model changeover, started production of the 1986 Taurus and Sable models today (Oct. 14).

The Atlanta plant formerly produced the Ford LTD and Mercury Marquis.

Auto sky is not falling, Bush tells Detroit leaders

By Michelle Krebs
Financial Editor

Vice President George Bush showed little sympathy for the auto industry on his visit to Detroit.

"The industry's just concluding one of the best years in history," he noted, when it was suggested that the Japanese are gobbling up the U.S. auto industry.

At a news conference after addressing the Economic Club of Detroit, Bush said he hopes Chrysler Corp. Chairman Lee Iacocca is wrong in his predictions that within two years the Japanese will hold 50 percent of the U.S. auto industry from fully built automobiles to components in U.S.-assembled vehicles.

"We were told when the VRA (Voluntary Restraint Agreement) was taken off that the short-run effects would be deleterious to the industry," he said. "Fortunately, that has not been the case.

"The sky did not fall down. The industry is doing pretty well," he added.

He said the drive by the world's top five industrial nations to push the U.S. dollar down and the Reagan Administration's retaliction against countries exercising unfair trade practices will produce an outcome different from Iacocca's scenario.

"I would hope the approach we're on will have a very different result from that," Bush said. "But we're not relaxed about it, because I think there are problems down the road."

Bush further said that the readjustment in the currencies has helped take some of the pressure off moves toward protectionism.

"We are going to have to continue to resist the siren call of across-the-board protectionism," he said. "I think the mood on the (Capitol) Hill is still a mood toward protectionism in various industries."

Bush said the Reagan Administration will continue to push to open up more markets. It also will do more "rifle-shot retaliation" against countries imposing unfair trade measures on the U.S.

Bush said it will take some time for the manufacturing sector to feel the effects of the better balance of the U.S. dollar and foreign currencies.

He added that the agricultural segment should be the first to enjoy the benefits.

After addressing the Economic Club of Detroit, Bush visited the University of Michigan to commemorate the 25th anniversary of the founding of the Peace Corps.

Multicraft division wins Ford Q1 award

PELAHATCHIE, Miss.—United Electrical Assemblies has received a Q-1 award from Ford Motor Co.'s Plastics, Paint and Vinyl Division.

United Electrical Assemblies is a division of Multicraft Enterprises, an automobile components manufacturer based in Mississippi.

Truck production remains above 74,000 for week

Domestic truck manufacturers' estimated production of 74,657 units last week was about the same as (down 0.12 percent) the previous week's 74,750.

The prior week's output was the highest since the week ended June 24, when 74,751 trucks were built.

Last week's targeted build was 17.92 percent ahead of the year-ago week's 63,312.

So far this year, 2,730,055 trucks have been assembled, 10.72 percent more than the 2,465,733 units completed last year at this point.

Ford Motor Co. plants in Kansas City; Louisville; Norfolk; Lorain, O., and Wayne, Mich., have scheduled daily overtime this week (Oct. 14).

Saturday (Oct. 19) overtime has been scheduled for Ford's Wayne plant.

Saturday (Oct. 12) overtime was scheduled at Chrysler Corp.'s Warren (Mich.) plant.

The Warren plant is scheduled to work two nine-hour shifts Monday through Friday this week.

Year's car output in Canada moves ahead of 1984

Auto production in Canada has finally caught up with the year-ago total after lagging behind the 1984 aggregate since mid-January.

So far this year, 836,774 cars have been assembled, slightly higher (0.07) than the 836,227 built last year at this point.

Scheduled output of 25,141 last week was up 4.47 percent over the previous week's 24,065 and was 35.39 percent more than the year-ago week's 18,570.

Truck makers scheduled production of 16,998 units last week, down 9.45 percent from the previous week's 18,772 and down 0.94 percent from the year-ago week's 17,160.

All assembly plants in Canada are closed today (Oct. 14) because of the Thanksgiving Day holiday.

Year-to-date, 675,553 trucks have been assembled, 6.43 percent more than the 634,753 units assembled last year at this point.

Imports fall to 5-month stockpile low

By Kathleen Hamilton
Assistant Managing Editor

The stockpile of new imported cars fell to a five-month low on Oct. 1, fostered by strong sales and muddled by varying new-model introduction dates.

There were 280,248 new imported cars in inventory at dealerships, ports and in transit as the month opened, a 29-day supply.

The days-supply figure has been hovering within five days either side of the recent number for a year. Last month, for example, there was a 31-day supply (293,268 units); on Oct. 1 a year ago, it was 24 days (179,171 units).

Import truck supplies plummeted in the face of strong sales. On Sept. 1 there was a 40-day supply (99,748 units); on Oct. 1, it fell to a 26-day supply (84,957 units).

Adding imported cars and trucks, this month's vehicle stockpile numbered 365,205, a 29-day supply. One month earlier there were 393,016 vehicles in stock, a 33-day supply. One year earlier, the import-vehicle stockpile stood at 257,941, a 27-day supply.

The stockpile of imported cars was split this way on Oct. 1: Japan, 62.84 percent; Germany, 26.29 percent; other countries, 10.87 percent. A month earlier, the split by country was Japan, 65.02 percent; Germany, 25.61 percent, and other countries, 9.37 percent.

Honors for the lowest inventory this month went to Yugo, which

UAW shuts down Chrysler

Signs carried by pickets at Chrysler's Jefferson assembly plant in Detroit tell the story: The company and the two UAWs failed to reach agreement by the deadline last week, and 80,000 workers in the U.S. and Canada walked off their jobs.

Big Three profits to total $7.7 billion for 2nd-best year

By Michelle Krebs
Financial Editor

The Big Three auto manufacturers collectively are well on their way to the second best year in their history, but their combined earnings will be about 21 percent below the 1984 record.

The Big Three will earn about $7.7 billion for 1985, based on an average of forecasts of auto analysts surveyed by Automotive News.

The $7.7 billion would put the domestic industry behind 1984's record $9.8 billion but ahead of the $6.3 billion earned in 1983, currently the second best year.

The third quarter is expected to be the Big Three's second best third-quarter with combined earnings totaling $1.07 billion, just ahead of 1984's combined $1.06 billion. The record for the third quarter is $1.17 billion in 1983.

Third-quarter earnings for the Big Three will be announced this week. American Motors will announce its financial results next week.

General Motors will earn about $513 million for the quarter, ahead of last year's $417 million. That would be GM's second-best third quarter; the third quarter of 1983 was GM's best ever with earnings of $737 million.

The analysts' forecasts for GM's third-quarter earnings range from about $475 million to $600 million.

For the year, GM is in line to earn about $3.66 billion, based on the analysts' average. GM earned a record $4.52 billion in 1984 and $3.73 billion in 1983.

The analysts' forecasts for GM's earnings for the year ranged from a low of $3.33 billion to a high of $4.10 billion.

For the third quarter, Ford Motor Co. will earn $291 million. If the analysts' average projection proves accurate, the third quarter will be Ford's second best, behind 1984's record $380 million.

Quarterly earnings estimates ranged from about $260 million to $370 million.

Ford is headed for its second best year ever with earnings to total about $2.34 billion. Earnings for 1984 were a record $2.91 billion.

Forecasts for the year ranged from $2.20 billion to $2.70 billion.

Chrysler Corp., which is paying taxes this year, will earn about $262 million in the third quarter, based on the analysts' average. That would be virtually un-

Key economic and non-economic issues involved

Strike costs Chrysler millions daily

By Mary Connelly
Detroit Reporter

Key economic and non-economic issues impeded settlement of a contract between Chrysler Corp. and 80,000 striking UAW members in the U.S. and Canada late last week.

The strike is costing Chrysler an estimated $10 million to $15 million a day.

Both sides expressed hoped for a short strike when the picketing began at 12:01 a.m. Wednesday.

But the two sides differed on how far they had to travel to reach contract settlement.

UAW President Owen Bieber, in announcing the strike, said "the gulf separating us on key issues is simply too great to bridge at this point."

"We believe every avenue has been explored and every alternative examined," he said.

Still unresolved when the strike began were issues central to the negotiations, he said. They included the UAW's demand that Chrysler workers achieve wage and benefit parity with employes at General Motors and Ford Motor Co., job security and a critical UAW demand that Chrysler curtail the use of outside suppliers thereby providing additional jobs for union workers in the corporation.

However, Thomas W. Miner, Chrysler industrial relations vice president, maintained that the "basics" of a tentative settlement were in place when the strike was authorized.

"We think it's a damn shame and it shouldn't have happened," said Miner, Chrysler's chief negotiator.

"I don't think Chrysler deserves it, but we got it."

The two sides were "well on the way" to an agreement which would have provided parity with workers at GM and Ford, he said.

"The proposal being discussed at the time of the union's decision to break off negotiations would have provided the company's U.S. employes with a series of benefits and wage increases to bring the Chrysler worker's wage and benefit package in line with those en-

15,576 compares with 12,427 on Jan. 1

Import dealerships up 25 pct.

By Dan McCosh
Detroit Reporter

New import franchises added by domestic dealers continue to inflate the import-dealer total, which reached 15,576 at mid-year, up about 25 percent from the end of last year when import-car dealerships totaled 12,427, according to an Automotive News survey.

Chevrolet's extension of its Isuzu Spectrum and Suzuki Sprint lines to virtually all its U.S. dealerships and the addition of the Merkur cars built by Ford in West Germany to Lincoln-Mercury dealerships produced the upswing in "new" import outlets.

The "captive" trend is likely to accelerate, and if plans to add captive imports and offshore-produced cars to domestic dealerships all materialize, by 1987 there will be few dealerships left in the U.S. handling only U.S.-built products.

But the growth in the number of dealers handling imports does not mean a huge addition of new dealerships. The 130 new dealers that handle only import cars, bringing the total to 3,952 at mid-year, represented a slight reversal of the decline that was noted at the end of last year.

The remainder of the total—11,624 dealerships, up from 8,605 at the beginning of the year—reflects the aforementioned Chevrolet and Lincoln-Mercury franchising of Suzuki, Isuzu and Merkur cars.

Regardless, real growth in import outlets is anticipated in the near future. Korea's Hyundai expects to open about 200 new Hyundai-exclusive shops in 1986, while Honda is also asking for "exclusive" status for its Acura car line, which will also add to the import dealer population.

In addition, domestic dealers adding a noncaptive import line continued to grow in the first half of 1985, with the 2,580 domestic dealers covering two bases representing an increase of 40 outlets in the period.

Shifts in the franchising pattern likewise were highlighted by the rush by domestic auto makers to

NADA's Daly to join Toyota

WASHINGTON—Robert C. Daly, NADA executive director of communications and industry relations, has accepted a similar post with Toyota Motor Sales. The announcement that Daly will become Toyota's national industry affairs manager is scheduled to be made later this week.

Isuzu slates ceramic engine for 1990

TOKYO.—Isuzu Motors, Ltd., said it will install an 1,800-cc diesel-based ceramic engine in one of its 1990 models. The composite engine system, which has a small turbine generator powered by emission gas, uses ceramics in all combustion chamber components—such as piston rings and valves—that are exposed to high temperatures. The engine is about 14 percent lighter than a conventional engine. Generating power and fuel efficiency will be improved by 30 percent, according to the company. Isuzu has already developed a ceramic engine for industrial use.

Chrysler runs against the tide

Early-month car sales dip 10 pct.

By Jenny L. King
Detroit Reporter

Come early October, the party officially was over.

At Chrysler Corp., the sales celebration continued, in spite of the temporary return to higher interest rates on loans to consumers which took the fizz out of General Motors and Ford Motor Co. sales in the first 10 days of the month.

Special interest rates brought buyers and 1985-model domestic cars together in record numbers from mid-August through September. October was awaited with some anxiety: Loans would be more expensive and the new 1986 models carried bigger price tags. Also, carryover inventories were at record lows.

The result was a combined 10.14-percent sales decline for Oct. 1-10, despite the fact that the period included the formal introduction dates for the domestic makers' 1986 models.

Ford and GM said their individual drops were less than expected while Chrysler reported a 39.24-percent sales increase compared with its year-ago total.

The domestic total of 202,002 was off some 22,000 units from 224,792 in 1984. Record for the period is 272,689 in 1978. The 10.14-percent drop broke a string of four consecutive record-breaking periods which began Aug. 21.

GM suffered a 14.84-percent decline, dropping to 106,549 from 125,121 a year ago. Ford was down even more, 23.66 percent, to 49,004 from 64,192. Both companies plus American Motors announced new 8.8-percent finance incentive programs on specific models beginning Oct. 7 for GM, Oct. 9 for Ford and AMC.

American Motors tumbled 32.47 percent to 2,465 from 3,650. Volkswagen notched a healthy 43.35-percent gain, its sales up to 1,508 from 1,052. Honda was off 35.69 percent, to 2,060 from 3,203. Nissan reported sales of 2,022 for the early-October period.

Chrysler carved out a 19.01-percent hunk of the market, its largest share this year and a substantial gain from 12.27 a year ago. GM dropped to 52.74 percent from 55.66 percent. Ford lost more than four percentage points, slipping to 24.26 percent from 28.56 percent.

AMC was down to 1.22 percent from 1.62 percent. Honda had 1.02 percent, off from 1.42 percent; VW was up to 0.75 percent from 0.47 percent, and Nissan had an even 1.00 percent its first early October on the market.

Only four of the Big Three-produced makes reported Oct. 1-10 sales gains. Plymouth was up 32.16 percent, Chrysler was up 46.66 percent, Dodge was up 38.34 percent and Pontiac was up 7.45 percent.

Minus signs were posted before the remaining year-to-year comparisons. Ford was down 18.29 percent, Mercury was down 34.51 percent and Lincoln was down 30.44 percent. Buick dropped 29.20 percent, Cadillac was off 26.10 percent, Chevrolet was down 15.84 percent and Oldsmobile was down 11.35 percent.

AMC Eagle sales were estimated the same as last year, Renault was down an estimated 36.46 percent, VW was up 43.35 percent and Honda plunged 35.69 percent.

The Oct. 1-10 daily selling rate averaged 22,445, down 10.14 percent from 24,977 in 1984. There were nine selling days in the period both years.

Year-to-date sales were up 6.58 percent, to 6,741,340 from 6,325,382.

Ford Escort was the top-selling nameplate in early October with a tally of 11,202. Oldsmobile Ciera was next at 8,099, followed by Chevrolet Celebrity at 7,878, Cavalier at 7,557 and Plymouth Reliant at 5,818.

Longo Toyota sells 100,000th vehicle

Longo Toyota, El Monte, Calif., has sold its 100,00th new vehicle. Chris Sollom and his mother, Sue Sollom, received a plaque from Bruce Fay, right, Longo general manager, and John Clark, left, dealership general sales manager, commemorating Chris' purchase of the milestone vehicle, a 1985 Toyota pickup. Chris also will receive free service on the pickup for 100,000 miles. Longo has been the largest-volume Toyota dealership in the U.S. for 18 years.

2 Yugo dealers join board; advisors set

By John A. Russell
New York Staff Writer

NEW YORK.—Yugo America broke new ground for the auto industry last week as it announced the appointment of two of its dealers to the corporate board of directors.

The company also formed a retail consumer advisory group which will report directly to corporate executives.

William Prior, president of Yugo America, termed both moves important because they give the company more input from various sources.

Yugo may be the first auto company to have dealers on the board of directors. Prior said the two dealers will provide the "retail conscience" for the board, which he considers essential.

The two dealers named to the board are Richard I. Loehr Jr., president of Dick Loehr's, Inc., Kalamazoo, Mich., and Raymond Van Duren, president of Ramsey Auto Imports of 17, Inc., Ramsey, N.J.

Prior told Automotive News that the program for the consumer advisory group is being formulated and that he expects the group to be active within a few months.

In some ways, it will operate in a manner similar to that of the dealer advisory group. The con-

Wisconsin appoints 'envoy' in AMC talks

By Richard Johnson
Detroit Reporter

Patrick Lucey, former U.S. ambassador to Mexico, has been appointed by Wisconsin Gov. Anthony Earl as special envoy to American Motors during discussions on the future of AMC assembly operations in the state, Automotive News has learned.

Lucey, a former Wisconsin governor, took part in an Oct. 16 meeting between Earl and AMC President and Chief Executive Officer Jose Dedeurwaerder. Lucey's first task will be to review a needs analysis being prepared by AMC.

AMC has said it will continue to build the Alliance/Encore subcompacts in Kenosha through the 1988 model year, but Dedeurwaerder wants the state to assist in improving the company's competitive position. AMC wants a commitment by next spring, when it must set plans for the 1989 model year.

Several other states have already approached AMC, should it decide to stop building cars in Kenosha after 1988. Preliminary meetings with representatives of interested states have begun.

Dedeurwaerder has insisted on something akin to the incentive package Wisconsin used to try to lure General Motors' Saturn project earlier this year. But state officials have maintained that Wisconsin's proposal embodied incentives already available to all manufacturers in the state.

Last week's meeting launched negotiations on an incentive package. Participants included Earl; Lucey; Dedeurwaerder; Marvin Stucky, AMC vice president—civic and government affairs, and Sherman Stock, a top policy advisor to Earl.

Stock said AMC has agreed to prepare an analysis of its needs and present it to the governor's office. Once the report is completed, Stock said he will join with Lucey "to see if we can accommodate them."

"I thought it was a very good meeting," Stock said. "Mr. Dedeurwaerder laid out what the company's needs are and expressed a desire to grow in Wisconsin. The governor said he would like to help in any way he can."

Stock said he believes a meeting of the minds between the two parties is possible.

"It has become a numbers game, but no one has broken down what the numbers mean," he said. He noted that huge dollar amounts linked to incentive packages in other states often include road, sewer and land arrangements which may be possible in Wisconsin.

"We're anxious to get a handle on what their needs are," he said.

An AMC spokesman said last week that the dinner meeting at the governor's residence "went well."

"It was very friendly," he said. "We exchanged our views. We expect to be having further discussions."

Success of Cargo truck could influence decision

Will Ford import Brazilian cars?

By Richard Johnson
Detroit Reporter

The success of Ford Motor Co.'s new Brazilian-built Cargo truck, which will go on sale in the U.S. next month, could help determine whether the South American country develops into a key, low-cost source of Ford passenger cars for North America.

Ford has acknowledged no plans to export autos from Brazil to the U.S., although there has been industry talk of a Brazil-sourced addition to the Merkur line later in the decade.

Ford plans to be receiving small cars from Mexico and Korea by 1988, and Ford of Canada will import subcompacts from Ford Lio Ho in Taiwan beginning next year. The outcome of the Cargo project is expected to help Ford officials decide Brazil's role in the increasingly internationalized U.S. car market.

"There is an indication that Brazil has the capacity to be a competitive low-cost source," said Lindsey Halstead, vice president—Ford Latin American Automotive Operations, in an interview with Automotive News.

"They're not totally there yet. We're pleased with the results that we've achieved to date on Cargo (and) we're meeting our projections. But time will tell."

The first Brazilian-built entries in the U.S. auto market were announced earlier this month by Volkswagen of America.

VWoA President Noel Phillips confirmed that the company will import two Brazilian-made entry-level products to the U.S. for the 1987 model year, a sedan and a three-door station wagon. Both will be priced at approximately $5,000.

"I wouldn't classify Brazil as a fully competitive low-cost source with Japan at this point," Halstead said. "I would only say that if we work at it hard enough and long enough, I think we have a prospect of at least having an alternative."

However, Halstead said Ford has no Brazilian passenger-car program set for the U.S.

"We don't have any particular plans in that regard," he said. "We'd like to swallow Cargo and make sure that we have our act totally together on that one and see how we do."

The Cargo, which will be offered initially as a Class 6 or 7 vehicle, went into production in Sao Paulo in March, and factories began turning out Cargos for the North American market in July.

Part of the reason for sourcing Cargo in Brazil, he said, is to avoid the same kind of erosion to the Japanese in heavier trucks that the U.S. has been experiencing in cars.

Of 25,000 planned for the first full year's production, 3,000-4,000 are due to be brought to the U.S. Brazilian content of the Cargo is in excess of 75 percent and is figured to reach 90 percent by 1990.

AMC offers 8.8 on some Jeeps

DETROIT.—American Motors last week extended its 8.8 annual percentage rate financing incentive to include some Jeep models.

Included are 1986 Jeep Cherokee, Wagoneer and Comanche.

The Jeep 8.8 APR program, like the one on Renault Alliance and Encore announced the preceding week, has a 36-month cap and runs until Nov. 20.

A 9.9 APR financing rate is available for loans of 37 to 48 months.

General Motors and Ford Motor Co. also have 8.8 APR programs on certain car and truck models.

Japanese chalk up another record year

Auto makers post profits of $2.3 billion on sales of $67 billion

By Michelle Krebs
Financial Editor

Japanese auto makers enjoyed another year of record-setting sales and profits.

For the third year running, the Japanese auto makers were successful in boosting income and revenue to record levels on not-so-dramatic increases in overall vehicle sales.

They have achieved those records by upgrading product mix and through the favorable relationship of yen to the U.S. dollar. The yen continued to be undervalued against the strong U.S. dollar, running at about 254 yen to $1 during the past year.

The Japanese companies also exported more vehicles, thanks to the lifting of the Voluntary Restraint Agreement (VRA) in the U.S., which expired in April. The Japanese government set new limits on Japanese cars exported to the U.S. but at significantly higher levels, making for a virtually free market.

The seven major Japanese auto companies had combined profits during their most recent fiscal years of about $2.3 billion on $67 billion in sales.

The four U.S. auto makers earned a record $9.8 billion in 1984 on $160 billion in sales. This year, without the benefit of VRA, the Big Four are on target to earn $8 billion.

Financial results of the U.S. companies are for calender year 1984, when the VRA remained in place. The fiscal years of the Japanese companies end at various times throughout the year so that some of them have ended and they are into their 1986 fiscal year. The fiscal years of the others end this fall so that 12-month periods, which ended earlier this year were used for calculations when possible.

In addition, the Japanese companies have strengthened their balance sheets considerably by retiring debt and putting them in a more liquid position.

Only the balance sheets of Nissan and Isuzu are less than outstanding. Nissan is in a turnaround situation after suffering a 26-percent decline in earnings in the previous fiscal year. Isuzu lost money in its most recent fiscal year.

There is little disagreement that the Japanese makers will continue to increase unit sales in the U.S. Japanese companies also have made plans to produce cars in the U.S. so that they will not be caught by the buzzsaw of protectionism.

However, what happens now that the yen is appreciating against the U.S. dollar is anyone's guess, and opinions run the entire spectrum.

The exchange rate during the past year has averaged about 240 yen to the U.S. dollar. Since the five top industrial nations recently announced they intend to drive the U.S. dollar down, the yen has appreciated to about 217 yen to the dollar.

One analyst believes the gravy train for Japanese auto makers may be grinding to a screeching halt.

Mori Matsumoto, vice president of institutional sales of Yamaichi International (America) Inc., the New York-based unit of one of Japan's major securities firms, said next year's earnings for Japanese auto makers' could decline. For some companies, it would be the first decline ever.

While most economists remain skeptical that the yen will stay at 210, Matsumoto sees that as a "very, very strong possibility." He gives it a 70-percent chance of happening.

If that indeed occurs, earnings of the individual companies could decline 10 percent or more.

He uses Honda Motor Co. Ltd. as an example. He estimates Honda earnings for the fiscal year which ends Feb. 28, 1986, will be 167 million yen, a 30-percent increase over the fiscal year ended Feb. 29, 1985.

Before the appreciation of the yen, he had forecasted a 19-percent earnings increase for the fiscal year ended Feb. 28, 1987. However, he has since downgraded his estimate. Honda's earnings, if the yen hovers at 210, will be 167 million yen, or flat, at best and 150 million yen in the worst case scenario.

What's more, Matsumoto sees Honda as being in the best position. Honda has been successful in upgrading its product mix, which will be even more enhanced by the introduction of a Honda-British Leyland made model. Also Honda's U.S. assembly operations have been a success and the new Accord has become popular in Japan, where unit sales for the industry have not increased.

The other Japanese auto companies could suffer earnings declines of more than 10 percent, Matsumoto said.

Further, he pointed out that in the past, if the yen appreciated, Japanese car producers raised prices to make up the difference. In fact, he said, that is the only choice to make up the difference.

This time, however, it will be a more difficult environment in which to raise prices.

Matsumoto said the South Korean producer, Hyundai, will cause "chaos in the price structure" of the U.S. market if it follows the same discount pricing strategy it has established in Canada.

At the same time, U.S. producers will be in the position to choose whether or not to raise prices, he said. In fact, they will have room to maneuver through incentives.

If the U.S. economy slows down, as is forecasted by 1986 or 1987, U.S. makers have high profit margins, giving them room to cut margins or to offer incentives.

Matsumoto pointed out that during the U.S. makers 7.7- and 7.5-percent financing incentives binge, Japanese producers began discounting, or at least eliminating premiums, on their products.

He further sees that if the U.S. economy slows, Japanese car producers may be vulnerable to fewer exports, which are expected to hit 2.3 million units this year. Exports will be slowed, he said, by general economic conditions or by quotas set by the Japanese or the U.S.

However, most other analysts see nothing but a bright future for the Japanese companies. They expect the Japanese to continue making headway in market share in the U.S. They see sales and profits continually increasing.

Donald DeScenza, senior securities specializing in the auto industry for Nomura Securities International, another Japanese firm with New York offices, is one of those who looks for continuation of good sales and profits for the Japanese makers.

Even if the yen rises to 210, which would represent a 15-percent increase, DeScenza said earnings will not be affected. Instead, the companies could hike the wholesale price. Dealers, who have been making "exorbitant margins," then would bear the brunt of appreciation in the yen.

He said the average Honda sells for $1,700 over sticker price; a Toyota $1,200 over sticker. With a 15-percent boost in the yen's strength, the average Honda would still sell for $975 over sticker and a Toyota $825 over sticker.

The margin over sticker, however, is not as large for the other Japanese makes, he pointed out. Another downward economic cycle would wipe out the premiums quicker than would the appreciating yen, he added.

A study by Data Resources Inc. (DRI), a Massachusetts economic forecasting firm, shows Japanese makers would not be pushed to the wall until the yen appreciated to 180, a highly unlikely level.

"The question becomes does it go far enough to force them to raise prices," said John Hammond, DRI's U.S.-based economist.

"We can't stand still any longer"

How China plans to fill the gap between vehicle supply and demand

BEIJING — China's auto industry will expand rapidly in the next two decades to meet the needs of the developing national economy and road transportation, according to Chen Zutao, chief engineer of the China Automotive Industry Corp. (CAIC), which oversees auto production in China.

Chen said that CAIC is mapping out a plan to quadruple the present auto output by the end of this century. The target will be reached in two stages: First, annual capacity will be doubled from the present 300,000 motor vehicles to 600,000 and annual output will be doubled again from 250,000 to 500,000 by 1990.

Next, capacity and production will be increased again to 1,300,000 and 1,200,000 vehicles, respectively, by the year 2000, while turning out new products of the 1990s level.

"We can't stand still any longer," said Chen. "Supply falls short of demand. Letters asking for trucks and other motor vehicles pour in and are piled high on my desk and on the manager's desk. We must speed up auto production immediately."

Production in 1984 totaled 290,000. In 1983, 240,000 units were produced, a 22.4 percent increase over 1982. Still, this output falls short of demand generated by developing freight transportation, containerized traffic, tourism and urban traffic.

Highway transportation plays a leading role in the total transportation system in China. There are few airlines, and railways link only about 30 percent of the country's 2,000 counties. Transport of commodities in and between villages is mainly handled by motor vehicles.

There is an increasing demand for motor cars, especially in the rural areas. Stimulated by China's new economic policies, farm output is rising, boosting rural incomes.

For the first time, peasants are pooling their money to buy trucks to transport their products to city markets and to haul cement, chemical fertilizers and other manufactured goods back.

Moreover, China is planning a network of expressways. Construction of the first four sections — between Tianjin and Beijing in the north, Shenyang and Dalian in the northeast, Shanghai and Nanjing in the east and Guangzhou and Shenzhen in the south — will begin soon.

When these expressways are completed, highway freight transportation volume will soar and more motor vehicles will be needed. Demand for public transportation is also expected to increase. There is now one bus for every 2,000 urban dwellers on average, and about half of China's cities have no taxi service.

Zutao outlined the two chief measures China is adopting to meet the planned target for automotive production: Reform of the management system at home and introduction of advanced technology from abroad.

Formerly, each auto plant was a self-sufficient factory that made everything from engines to the smallest screw and then did its own assembly work. Now emphasis has shifted to specialized production.

"The government's investments in the auto industry during the seventh five-year plan period (1986-1990) will be more than those in the sixth-plan period (1981-85)," said Chen. "Nevertheless, the industry will have financial difficulties. But I think it is feasible to collect funds by diversified channels, such as having users pay in advance, or by issuing stocks or getting bank loans. Also, we are willing to accept foreign investments and loans given on favorable terms."

He said the gap between supply and demand is difficult for China to fill if it relies solely on the resources at home. "We are willing, on the basis of equality and mutual benefit, to run joint ventures, undertake co-production, do cooperative designing or conduct compensation trade in cooperation with foreign firms, or do assembly work with parts and accessories provided by them."

Chen is optimistic about the future of the auto industry. It has a solid foundation and is making improvements, he said.

The No. 1 Plant at Changchun in the northeast is modifying its production lines to make a number of models instead of a single one. Computer controls are also being installed. The No. 2 Plant in Hubei now has 117 automated production lines fitted with 20,000 pieces of advanced equipment. Up-to-date testing and quality-control devices have also been installed.

Many new models are in the development stage, including a bus equipped to serve meals to 60 people; a mobile medical unit equipped with an operating table; container trailers; mining trucks with a load capacity of 30 tons; mini-trucks of all kinds; and a high-grade six-cylinder limousine. In 1984 alone, a dozen new models passed tests and were put into production.

Chen pointed out that China is producing 100 million tons of oil and 40 million tons of steel a year and that the country is fourth in the world in annual rubber output — a good foundation on which the Chinese auto industry can develop further.

This article was written by Zong Bian, correspondent for Xinhua (New China) News Agency, government news agency of the People's Republic of China, and appears by permission of China Features, a division of Xinhua.

Excludes 20,790 KD sets. (7) Parent company of Subaru of America. (8) Includes passenger cars only. Dollar figures translated at average exchange rate during particular fiscal period.

Competing in South Africa's tough market

Makers face stiff local content laws, increased taxes and fuel prices

By Jeremy Sinek
Staff Correspondent

There are three dominant factors that shape the nature of the South African motor industry as well as its problems.

First, it manufactures a disproportionately large number of models in relation to the overall size of the market. Second, there is a stringent local content requirement, backed up by heavy excise duties on imported vehicles. And third, South Africa has been considered to be a potential growth market unequalled by any other developed nation in the Western World.

In 1983 and 1984, the South African vehicle market was just over 400,000 units. This included approximately 270,000 passenger cars and 115,000 light commercial vehicles. The balance was medium and heavy trucks.

Yet serving the passenger car market alone, there are presently 10 different manufacturers, producing 16 different car brands. These in turn encompass some 30 basic model lines, comprising over 200 individual model variations.

Not surprisingly, "rationalization" is the current buzzword in SA motor industry circles. But, while similar markets like Australia have seen rationalization effectively enforced by government measures, the policy in South Africa has been to let market forces achieve the same ends.

As yet, despite the recent merger between Amcar (which manufactures Mazda, Mitsubishi and Peugeot products) and Ford, there is little sign of that happening.

Where the government does take a hand is in the form of the local content program, which requires that 66 percent of the vehicle by weight be manufactured locally in South Africa.

As with CAFE in the U.S., a certain amount of flexibility is permitted. Car makers can offset some models that achieve more than 66 percent against others that achieve a lower degree of local content.

A recent development, pioneered by BMW, is the large-scale manufacture of certain components in South Africa, with the surplus being exported to the parent or associated companies abroad.

Nonetheless, the combined effect of the above factors is that it is impossible for manufacturers to achieve worthwhile economies of scale on domestically produced components. So despite the availability of relatively cheap labor (the minimum rate is approximately $1.50 per hour), vehicle prices are among the highest in the world.

On the more positive side, the burgeoning spending power of the majority black population provides scope for long-term market growth that is possibly unparalleled anywhere else in the Western world.

This explains why so many car makers have established themselves here in the first place. Current political and economic developments, however, suggest that, at best, the black market explosion will be smaller and slower than originally anticipated.

Since 1980, the South African vehicle market has been dominated by Toyota. This South African-owned and managed company — the only SA auto maker listed on the Johannesburg stock exchange — accounted for 24.8 percent of all vehicle sales in 1984.

It was market leader in passenger cars and light trucks (21.9 and 32.8 percent, respectively), and placed second and third in medium and heavy trucks with 24.6 and 13.0 percent, respectively.

Amcar and Mercedes-Benz were the respective medium and heavy commercial vehicle market leaders.

Apart from skillful management and the inherent qualities of the vehicles, Toyota's success has also been attributed in no small part to economies of scale achieved by keeping the basic model lines to a minimum number (for example, just Corolla and Cressida among passenger cars), while producing a wide number of derivatives for maximum market coverage.

While Toyota has extended its dominance into 1985, the other 1984 front-runners have fared badly so far this year. Ford (second in the first half of 1984 with 14.0 percent of the total market) had slipped to sixth (9.5 percent) in the same period this year, while Amcar fell from third with 12.2 percent to fifth with 10.0 percent. Other losers were Nissan, down from 12.1 percent in 1984 to 10.3 in 1985, and GM, down from 11.4 to 10.6 percent.

The greatest headway has been made by Volkswagen/Audi, which due largely to the acceptance of the new Golf/Jetta has increased its market share from 9.8 to 11.4 percent, to take second spot behind Toyota; and Mercedes-Benz, which is up from 6.9 percent in 1984 to 8.6 percent in 1985. Although unchanged in the rankings, BMW has also improved its market share, from 3.7 to 4.3 percent.

All these gains and losses should, however, be seen in the context of a major slump in the overall market, which has seen first-six-months sales slide by 38 percent compared with the same period last year. For over and above the generally poor state of the South African economy, the auto makers have been battered by a series of fiscal body blows.

There is quite a market for pickups, called bakkies, which has led to several local derivatives such as this Ford Escort-based Bantam.

Up to and including June 1984 the market was booming. Then General Sales Tax was increased from 7 to 10 percent on July 1; interest rates went up later the same month; and stiff hire-purchase restrictions were introduced in August.

In January this year there was a 40 percent increase on the price of fuel, followed in March by a new personal income tax on the use of company-provided cars. Also in March, GST went up again from 10 to 12 percent, and the excise duty on imported cars was increased from 100 to 125 percent.

Simultaneously, a drastic fall in the value of the Rand greatly increased the cost of imported components, which account for an estimated 40 percent of the total price of a car.

Consequently, the latest predictions put the car market at no more than 200,000 in 1985, compared with last year's 269,000, with a marked swing towards smaller cars in the VW Golf/Toyota Corolla bracket. At mid-year the auto industry was operating at an estimated 50 percent of single-shift capacity.

The major players

Following are the major auto manufacturers currently operating in South Africa:

Alfa Romeo South Africa —Wholly-owned subsidiary of Alfa Romeo. Due to its current performance, Alfa Romeo will be withdrawing from South Africa. In addition to Alfa Romeo sedans and sports cars, it has been manufacturing the Daihatsu Charade minicar. Production of a Fiat-based half-ton pickup has already ceased.

Amcar Motor Holdings — Formerly Sigma, Amcar manufactures Mazda and Mitsubishi sedans and commercial trucks (sold through MMI dealer network), and, under contract, Peugeot sedans. Wholly owned by Anglo-American since 1983, recently merged with Ford of South Africa to form Samcor, with A-A holding 60 percent, Ford of Canada the balance. Aims to rationalize production in the long term, but immediate post-merger buyer uncertainty has in the short term damaged sales of both companies.

BMW (South Africa) — Wholly-owned subsidiary of Munich parent company. Makes most European 3, 5 and 7 Series derivatives, plus some local variations of its own. Has pioneered concept of exporting SA-built components to offset imported ones in meeting local content requirements.

Ford Motor Co. of SA — (See Amcar.) Makes Escort, Sierra and until recently Granada sedans, as well as South African versions of Escort and Cortina-based pick-ups. Escort sedans and Cortina pickups will likely be the first casualties of post-merger rationalization, but will continue to have separate marketing organization from MMI, selling badge-engineered Mazdas.

General Motors South African Ltd. —Wholly-owned GM subsidiary. One of the longest-established (since 1926) SA auto makers. Makes Opel Kadett, Ascona and Rekord/Commodore sedans, plus Isuzu commercial vehicles. Imports Suzuki microvans and four-wheel drives.

Mercedes-Benz of South Africa — Previously partly South African-owned (39.9 percent), under UCDD name. Became 50.1 percent Stuttgart-owned in 1984 and name changed to Mercedes-Benz South Africa. Manufacturing Mercedes-Benz W123 and S-Class sedans, and also the Honda Ballade car under license. Market leader in heavy commercial vehicles.

Nissan SA — Established in SA 25 years ago and formerly owned by Messina. Recently acquired with Magnig trucks by a subsidiary of South African Sanlam insurance group. Makes Langley/Pulsar, Laurel and Skyline sedan ranges, and is second only to Toyota in the light commercial vehicle market.

Renault Africa — Recently returned, via a South African holding company, to ownership of Renault France, after a 13-year period of absence during which the Renault 5 was made and marketed in SA by Toyota. Current range relies heavily on the R9/R11 car, which is assembled under contract alongside Land-Rover four-wheel drives by Leyland (which ceased manufacturing its own cars in 1983).

Toyota South Africa — The only independent South African owned auto maker, and the most successful. Manufacturing in SA since 1965. Achieves wide market coverage yet good economies of scale with numerous derivatives of just two sedan (Corolla and Cressida) and two light commercial (Hilux and Hi-Ace) model lines.

Volkswagen of South Africa — German-owned subsidiary, enjoying something of a revival in 1985, having slumped heavily in the early '80s. Makes Golf/Jetta, Passat and Audi 500 sedans, plus Microbus and Golf-based light pickups.

VW-Audi holds lead as sales swell in Europe

Car buying booms in the U.K. but remains in the doldrums in France

By Richard Feast
European Editor

Preliminary returns for July and August suggest that new-car buying is accelerating across Europe following a first half-year in which zero growth was recorded.

The unofficial registration statistics also reveal that the VW-Audi group has held on to its market lead despite a small decline in penetration. Second place Fiat Auto has slipped as well, while Ford of Europe and GM's Opel-Vauxhall improved in the eight-month period compared with their positions at the end of six months.

Werner Schmidt, VW sales director, had anticipated the slight erosion of his company's market share during July and August. The company is short of all stocks, but particularly the Golf, and the long summer vacations at the factories were expected to result in lost business.

Companies which had not been achieving such high results earlier in the year, and thus had plentiful stocks, were able to take advantage of VW's temporary shortfall.

The other major factor that contributed towards the sudden rise of Ford and GM was the unique August boom which occurs in the U.K. While the rest of Europe generally regards August as a slow sales month, the U.K. is at its peak then. As No. 1 and No. 2 respectively in the U.K., Ford and GM were able to benefit.

August registrations in the U.K. were 373,300, compared with 986,100 for the previous seven months combined. During August Ford recorded 102,200 cars and GM, 59,900. The U.K. tallies considerably enhanced the two companies' overall European standings.

For the first eight months of 1985 European sales totaled 7,436,600, about 3.3 percent more than the same period last year. This compares with 5,584,600 registered in the first six months, which was equivalent to last year's performance.

While much of the increase came from the U.K., there was a general upturn across Europe during July and August with one notable exception. French sales remained in the doldrums. As the second largest market in Europe, it had a large bearing on the overall trend.

France enjoyed two exceptional years in 1982 and 1983 when annual sales exceeded 2 million, but the government squeeze on the economy has dampened spending. This year may finish lower than 1984, which was the worst for new-car sales since 1975.

The environmental debate in Germany slashed demand in early 1985. Now that exhaust emission regulations have been settled, German buying is picking up.

Among the other major national markets, Italy and the U.K. are now ahead of 1984 levels. Even Spain, which had been in the doldrums, has picked up. The Netherlands has moved from deficit to advance within a space of two months.

With German buying on the rebound, there seems little doubt that VW-Audi will hang on to its advantage in the remaining four months. Its nearest rival, Fiat, has lost market share across Europe, but has maintained its position because Italian sales are firm. Even there Fiat has come under pressure from importers (notably VW and Renault) and its huge domestic market share has been dented.

There is little to choose between the two U.S.-owned companies. Ford still maintains its historical small advantages, but GM has ambitious targets for the new Kadett, its most important volume model. The Kadett has not been well received in Germany, where VW's Golf remains the favorite, but has worked wonders in the rest of Europe for Opel and Vauxhall.

The Peugeot group's position has been maintained solely by the Peugeot 205, and to a lesser extent by the Citroen BX. The new Peugeot 309, which is going on sale in France, will be a welcome model following the steady demise of the Talbot brand.

Renault's new R5 is selling quite well across Europe, but it has not made the anticipated impact in France where the company's market share has fallen since the model's announcement. The introduction of the five-door R5 and next March's launch of the R21 (the R18 replacement) are the keys to the company's overall European standing.

Among the other makers, the climb by Benz is the most remarkable. An 18 percent first-half increase in registrations in Europe was unmatched in the industry.

Mercedes' big gain was in Germany, where its market share shot from below 9 percent to over 11 percent. There were small gains across the board. The 190 series is selling briskly, and the new mid-range 200/300 has exceeded all expectations. Plans are to lift Mercedes production volume next year.

BMW is recovering from setbacks in Germany earlier this year. It has introduced a diesel version of the 3-series. Need for this version was highlighted by sales of the Mercedes 190 diesel. BMW is giving priority to recovering lost domestic market share, but the concern is that the new mid-range Mercedes will harm sales of the BMW 5-series.

Volvo continues to make small market share gains. Saab, Seat and Austin Rover were down marginally at the halfway point.

The VW Golf II has helped maintain the company's No. 1 spot in Europe.

Scorpio has been well received and Ford will build 60,000 this year.

European auto industry eyes record sales

Will 1979 record be broken in 1986 or 1987?

Demand for new cars in Western Europe next year may be heading back to the peak levels reached in 1979. Buying patterns across the continent have accelerated in the second half of this year following a no-growth first half.

If the trend continues into 1986 and 1987 the record will almost certainly be broken. "People do seem to want cars, good cars in particular, and they are spending more and more of their income proportionally on them," comments DRI Europe's John Lawson.

Statistics compiled by CSCA, the French trade and industry association, show car sales steadily increasing through the 1970s to peak at 10.35 million in 1979. Its figures include 14 European countries, but omit returns from Greece (65,700 last year) and Finland (125,000).

The second oil crisis resulted in a 1980-81 slump from which demand has not yet fully recovered. The total rallied in 1982 and in 1983 rose to 10.21 million. But the setbacks in France and Germany saw last year's total drop back once more to just under 9.90 million.

Continuing environmental problems in Germany and economic problems in France ensured that in the first six months of this year overall demand remained unchanged. However, two months later the early sales results indicate that buying is on the increase. Germany's deficit has been cut, Italian sales remain strong and there have been improvements in Britain, Spain and Belgium. Only French buying remains stagnant.

This diversity in national cycles is what distinguishes Europe from the U.S. Overall demand in each region is broadly similar: 9.9 million in Europe last year, 10.12 million in the U.S. But in America, when auto buying slumps as it did in 1982, results are horrendous.

By contrast, the lack of commonality within the various European national markets creates far less pronounced business cycles overall. In 1982, for example, France enjoyed its best year ever, just under 2.06 million new-car registrations. Over the border in West Germany the total, 2.15 million, was the lowest in seven years and nearly 20 percent below the national record.

The peaks and lows in Europe and the U.S. illustrate the point. Over the past decade U.S. demand has varied by 3.19 million units, while in Europe demand has fluctuated by 2.14 million.

U.S. buying reached its peak in 1978 at almost 10.95 million. Yet within four years it had sunk by 20 percent to 7.75 million. Europe's best year was 1979, when just under 10.35 million new cars were registered. The worst performance since then was 9.6 million in 1981, a drop of 7 percent. Even in 1974, in the immediate aftermath of the oil crisis and when the European market was less mature, 8 million new cars were bought.

The sequence of national peaks is evenly spread across the past decade. Over the past 10 years the country-by-country peaks amounted to 11.3 million sales. By way of contrast, the various low points added up to 7.8 million.

—Richard Feast

European new-car market shares by manufacturer

Manufacturer	6 mos. 1985	1984 Total	1983 Total	1982 Total	1981 Total	1980 Total	1979 Total	1978 Total
Fiat Auto	12.9	12.7	12.0	12.3	12.7	11.8	10.0	10.0
Ford	11.7	12.8	12.5	12.3	12.2	11.1	12.0	12.2
General Motors	11.5	11.1	11.1	9.6	8.3	8.7	9.6	10.3
Japan (all)	10.3	10.2	10.1	9.5	9.6	9.8	7.3	6.4
Peugeot SA	11.5	11.5	11.8	12.3	13.1	14.6	17.1	17.9
Renault	10.8	10.9	12.6	14.4	13.7	14.9	13.5	12.8
VW-Audi	13.0	12.0	11.8	11.9	12.8	11.8	12.2	11.5

These six manufacturers, together with the combined Japanese importers, represent the dominant sales blocks in the 16 western European countries. All market shares have moved steadily closer following the periods of record demand in the late 1970s.

Source: CSCA. Statistics indicate the high and low sales years in western European countries over the past 10 years.

Renault calls its R5 the Superfive or Superclone.

The R25 has sold well for Renault but volumes are comparatively small.

The Opel Corsa, made in Spain, has rounded out GM's lineup in Europe.

The new Mercedes-Benz 200/300 models have boosted company sales.

Slugging it out in France

European and Japanese competition dent Renault and Peugeot

The two big French auto makers, Renault and the Peugeot group, dominated Western-European car sales at the end of the 1970s. At that time they accounted for nearly one in three new cars sold there. Now, in the mid 1980s, the proportion is just one in five.

The results indicate competition has highlighted the weaknesses inherent in the two companies. They have declined while enjoying protection from Japanese imports in the two countries that are most important to their manufacturing and sales base, France and Spain.

The increased competition came from three sources: General Motors, Fiat Auto and Japan. The relative stability of Ford of Europe and the VW-Audi group in terms of market share reflects a more substantial inner strength than that possessed by Renault and Peugeot (PSA).

The French companies achieved their late '70s success from different directions. Peugeot grew by acquisition, first Citroen in 1975 and then Chrysler-Europe in 1978. It produced an unwieldy, uncoordinated group which at the time had nearly 18 percent of western-European car sales. An early plan to run Talbot (formerly Chrysler) as a separate division was quickly dropped, and the painful start of absorbing it totally into Peugeot was begun.

There were too many conflicting products, and too many old ones. As sales declined, morale within the group sank. Financial losses were huge. Customers switched to Renault, particularly in France. Renault's internal growth was given a big boost.

This steady increase in Renault market share during the period coincided with continued good demand in France, where sales peaked at more than 2 million in 1982-83. It led directly to Renault's success as No. 1 in Europe from 1980 until 1983.

PSA's market share stabilized by 1983, as its reconstruction plans began to take effect. These involved integrated group products, sharing of components and factories and considerable reductions in personnel. The process is not yet complete. Citroen is still over-manned and losing money.

PSA is much further along in the rejuvenation program than Renault. As a state-owned concern, its high labor force and old-fashioned work practices were regarded as integral parts of its structure. While demand was brisk, its inefficiencies could be masked.

However, PSA began fighting back with new models (Peugeot 205 and Citroen BX) at a time when domestic demand went into reverse. At the same time investments in the U.S. to make Renault a global concern (AMC and Mack) were yielding negative results. The company was also under attack from its own employes for pursuing international aims rather than looking after French needs. A tardiness in renewing key products dampened Renault's showroom appeal.

Thus Renault sank into unprecedented financial losses, as employes vetoed a restructuring plan. It cost Bernard Hanon his job as president-director general — a similar fate had already befallen Jean-Paul Parayre at PSA —and brought a new hard man to the head of Renault. Oddly, Georges Besse's view of Renault's future includes retrenchment, modernization and a smaller workforce, much like PSA's aims a few years earlier.

These events in France took place while the Japanese made headway in all markets that allow free access. Their notable success was in the tough West German market, where the Japanese achieved 12 percent from a minimal base in a short time. They did so not at the expense of the local makers, but at the cost of French and Italian imports.

At the same time, two of Europe's major manufacturers began seriously to tackle their problems. Fiat's retrenchment and reorganization in the late '70s and early '80s followed a long period of neglect, anarchy and chaos. The effectiveness of its strategy is reflected in its much improved market share and solid financial progress.

At General Motors the decision to build powertrain factories in Austria and assembly plants in Spain was an indication of its European ambitions. It poured money into new products and facilities after concentrating all R&D with Adam Opel in West Germany.

GM's main contribution towards improving its European standing was putting a serious sales effort into an area that it had long neglected: Vauxhall Motors in the U.K. There, it doubled market share at a time when demand had never been higher. The results can be seen in its overall European standing.

There have been far fewer fluctuations in the market shares of Ford and VW-Audi. Ford's went steadily up, to the extent that it enjoyed brief European leadership last year. This year that honor has passed to the VW group, a remarkable effort when the depressed German demand earlier this year is taken into account.

The Big Six have moved closer during the 1980s. At the 1979 peak the No. 1, PSA, was separated from the sixth biggest retailer, GM, by 7.5 percent. Today's leader, VW, has only 2.2 percentage points advantage over Renault in sixth.

Supreme Court refuses to hear libel-case appeal

WASHINGTON.—The U.S. Supreme Court has left standing a lower court opinion that a 1981 CBS program about the dangers of multi-piece rims did not libel Redco Corp., a Pennsylvania manufacturer of such rims.

The CBS program, 60 Minutes, used an explanatory and cautionary movie made by the Insurance Institute for Highway Safety in a segment called "Killer Wheels." It later won an Emmy Award.

The Supreme Court refused to hear an appeal from a Third Circuit ruling that had upheld an earlier Pennsylvania Federal District Court decision. The lower court in March, 1982, said the CBS program was a constitutionally protected opinion piece.

Redco had claimed its business was adversely and severely affected even though its name had not been mentioned. The judge agreed but denied the libel charge since Redco had admitted there had been accidents involving the multi-piece rims.

Accorti, market representation manager.

Chrysler plans to import 150,000 cars from Japan

Continued from Page 4

Base price of the Colt is $5,431, while the Turbo is being advertised as the lowest-priced turbo on the market at $7,894. Mitsubishi Motor Sales of America (MMSA), however, sells its Mirage Turbo at $7,879.

The truck price leader, equipped with a 2.0-liter engine, is $5,788. In keeping with the past several years, only Dodge outlets will be selling the Ram 50 truck series.

"We've found that we've been successful in marketing the Dodge franchise as the place to buy a truck," Cunningham said of the decision not to offer the pickup through Chrysler-Plymouth points. "We have different products coming, both import and domestic, that won't be sold through both Chrysler-Plymouth and Dodge."

The Colt Vista, which is a cross between a station wagon and a van, will again offer four-wheel drive, which was initially offered as an option midway through the 1985 model run.

Mike Coughlin, director of sales development for Import/Export Operations, said that nearly 40 percent of Vista sales include the 4WD option. Cunningham estimated that about 35,000 Vistas and 80,000 Colts will be sold during the 1986 model year.

Conquest will also return with the addition of a high-performance model called the TSi. The car features flared fenders and quarter panels, 15-inch wheels, and 176-HP intercooled turbo 2.6-liter power plant. The TSi produces 31 more horsepower than the non-intercooled turbo found in base models.

Estimated price of the TSi package is about $17,000, or about $3,000 more than the standard Conquest.

Imports show 25-pct. increase in dealerships

Continued from Page 1

add new imports to their dealer networks.

Total import franchises jumped 23 percent, from 16,191 to 19,897 in the first six months of the year. But the 3,747 new outlets handling Chevrolet and L-M captives were more than the total increase of 3,706.

About half the import makes gained and half lost ground during the first half. Italian and French makes showed some loss, and the major gains were recorded by the Japanese, Swedish and West German marques, a pattern following sales trends.

Nissan, with 1,109, and sales leader Toyota, with 1,082, were the only independent imports with franchise totals in four figures.

Volkswagen builds regional quarters

TROY, Mich.—Volkswagen of America is constructing a new regional hedquarters office in Dublin, O. The 6,700-square-foot office building, which is expected to be completed in December, adjoins VWoA's Training Center and Parts Depot.

The new complex will provide sales, service and parts support for dealerships in VWoA's Columbus region, which covers lower Michigan, Ohio, Kentucky and Indiana. Paul Moneypenny is regional manager, and Paul Esenpreis is assistant regional manager.

Consumer advisory board formed

2 dealers named Yugo directors

Continued from Page 3

sumer group will provide input to the company on product development, dealer relations, customer satisfaction, image and awareness as well as on the total driving and owner experience of the Yugo.

Executives will meet with the consumer group, and Prior stressed that this is "not a public relations thing" or an owners club. Instead, he views the group as providing feedback to the company from the consumer level just as the dealer advisory group provides input from the retail side of the business.

"We want to know what is going on," he said.

Prior said two more dealers have been asked to join the dealer advisory group. They are Allen Gaines, president of Fireside Imports and Fireside Chrysler-Plymouth, Schaumburg, Ill., and Richard S. Dyer Jr., president of Dyer & Dyer, Inc., Chamblee, Ga.

•Prior said the dealer advisory group has been instrumental in several important decisions the company made during the launch phase.

It aided in the selection of the company's advertising agency and helped develop the concept that the Yugo should be presented as reliable and durable rather than concentrating entirely on low price. It also has been involved in the advertising approval process.

Another critical task for the group was explaining the retail auto business to the manufacturer, Zastava, during a trip to Yugoslavia last summer.

Prior said all 91 Yugo dealers now have both his home phone number and a "hotline" phone number in his office so they can reach him "any time." In addition, all senior managers of Yugo are instructed to telephone five dealers per day to talk about the business.

"We're trying to be a retail-driven company," Prior said, adding that this influenced another Yugo decision: The company "will not do any direct fleet or lease" sales. He said he is referring calls to dealers on those matters, and he said that Yugo is "opposed to two-tier pricing."

In the next few weeks, dealers will receive a questionnaire which Prior described as a "report card of Yugo America."

They will be asked to comment on anything and everything because "we want to know what they are thinking."

Is there a car from Brazil in Ford's U.S. future?

Continued from Page 3

according to Ford officials.

Halstead said the question of Brazilian quality should be answered by the Cargo project.

"We're pleased with the initial quality we're getting out of the vehicle," he said. "That is a compromise we are not willing to make and I think we're pretty close to getting past that one. We'll know better when the customers get them and drive them.

"But the initial rides and drives that we have had on the prototypes and all of the quality review data that we've reviewed would say it's first class," Halstead said. "In terms of cost, it's meeting its targets. But we've got a ways to go."

Ford of Brazil is already a substantial exporter of components to the U.S., sending 2-liter, normally aspirated engines for the Ranger series; 2.3-liter turbocharged power plants for Thunderbird, Mustang, Cougar and the German-built Merkur XR4Ti, and 2.3-liter normally aspirated engines for industrial use.

The Brazilian subsidiary also exports AM-FM cassette radios and other electronic controls and amplifiers to this country.

Brazil also shipped 25,000 Escorts to Norway, Finland, Sweden, Switzerland and Iceland last year and is exporting another 15,000 of the subcompacts to those markets in 1985. In addition, Ford of Brazil sends CKD units of its Corcel and Del Rey models to Venezuela for assembly in that country.

Last year, Ford of Brazil exported $475 million worth of merchandise to other nations. The total is expected to reach $500 million in 1985, and Ford is projecting 5 percent growth for 1986.

Fiat continues search for mate as Ford talks die

Continued from Page 2

the more I realized it was impossible to achieve," Agnelli said.

Nonetheless, a joint venture or merger among Europe's top six companies remains a valid strategy, Agnelli said.

European production capacity exceeds demand by 2.5 million units, and that overcapacity represents half of the total overcapacity worldwide, he pointed out.

Each of the six major producers holds between 11 and 13 percent of the market, resulting in no clear leader. European companies collectively have lost billions in the past five years. Agnelli expects the industry to reduce its losses in 1985 and move close to the break-even point in 1986.

Further, Agnelli said, the companies that reach a joint agreement first will have an advantage in locking up a quarter of the European market, a strategy Fiat has chosen. However, for the time being, Agnelli said Fiat needs to reflect upon its negotiations with Ford before it pursues another mate.

Duesenberg sets Harrah's record

Continued from Page 6

Harrah, adult sons of the late William Harrah, the collection's founder.

The men in turn put the vehicles on loan to the William F. Harrah Automobile Foundation, which will build a new museum in downtown Reno to display several hundred of the collection's best cars, as well as private donations, and its extensive automotive library.

The auction attracted 624 registered bidders. The third of three such auctions is scheduled for the fall of next year.

OBITUARIES

Vincent W. Piggins, 67; fathered Z-28 option

DETROIT.—Vincent W. Piggins, the father of the Chevrolet Camaro Z-28 option, died last Thursday (Oct. 17) after suffering a massive heart attack in September. He was 67.

Piggins recently was honored by Chevrolet, where he worked for 27 years before retiring in 1983, as one of the legends of performance. He is credited with the original concept of producing the virtually race-ready Camaro Z-28 in 1967 as an option available from any Chevrolet dealer. He joined Chevrolet in 1956 from Hudson.

Richard S. Smith

WEYMOUTH, Mass.—Richard S. Smith, president of Ricky Smith Pontiac-Subaru here, died Oct. 5. He was 66. He established the Pontiac dealership in 1959 and added Subaru in 1971. Mr. Smith was a founder, past president and secretary-treasurer of the New England Subaru Dealers Council and a member of the Boston Zone Pontiac Dealer Council.

Lloyd Leo Grant

PUYALLUP, Wash.—Lloyd Leo Grant, 82, died Sept. 6. Mr. Grant owned automobile dealerships in Puyallup, Seattle and Spokane for more than 50 years. He operated dealerships in Seattle and Spokane from 1926 to 1942. After World War II, he opened a Nash dealership and later headed an Oldsmobile point. He owned a Chevrolet store in Puyallup from 1959 to 1975. Mr. Grant was a director of the Washington State Auto Dealers Assn.

Sidney Pelunis

BEACHWOOD, O.—Sidney Pelunis, 70, who began his career as an auto salesman in 1953, died recently. For many years, he was associated with his brother, A.D. Pelunis, in the Oldsmobile dealership bearing the family name. Sidney Pelunis had served as president of the Greater Cleveland Plymouth Dealers Assn. and as treasurer of the Cleveland Automobile Dealers Assn.

Joseph Lanfranco

RIVERSIDE, Calif.—Joseph Lanfranco, 43, chairman of the National Chrysler-Plymouth Dealer Council, died Oct. 12. Mr. Lanfranco worked for Chrysler Corp.'s Los Angeles zone for 10 years in many capacities, including district manager. He became owner of Riverside Chrysler-Plymouth in 1973, and a partner in Chrysler-Plymouth Center in Corona and Hemet C-P in 1982.

Steady now

Ford district service engineer John Henage is not balancing a Merkur XR4Ti over his head—he is conducting Merkur technical training for Los Angeles-area Lincoln-Mercury dealers and salespersons. The seminars heighten awareness of Merkur's technical attributes such as a turbocharged engine and four-wheel independent suspension. According to Henage, car salespersons need such training to keep one step ahead of today's more-sophisticated car shoppers.

Imported-car inventory falls to five-month low

Continued from Page 1

reported four cars in inventory and, yes, that included port, in-transit and dealership stocks, according to Yugo President William Prior. He said next month's survey should turn up more; a shipment has landed since the month opened.

Elsewhere, import inventories vacillated wildly as shortages set in among some imports as their model year closed. Sales shot up (especially for trucks), and others continued with business as usual because they will not introduce new models until the start of the calendar year.

Jaguar was a prime example of the model-year-changeover blues: Its inventory shot up from its usual realm of 17 days to 56 because dealers weren't allowed to presell cars.

Volvo, traditionally beset by shortages at this time of year, saw a big jump in its days-supply number, apparently because it didn't have enough cars to sell.

The big decreases in days-supply numbers for BMW and Volkswagen were due to a combination of increased sales and decreased inventories. Audi's days-supply figure jumped only because of increased shipments; its sales actually rose during September.

Chrysler Corp. captive imports were the big winners in reducing inventories, both of cars and trucks, by more than doubling their daily selling rates. But Mitsubishi—which supplies Chrysler with its captives—pulled off a nearly equal performance for its own dealer network, slicing its days-supply figures for cars and trucks the same way.

The Chevrolet captives' big changes in days-supply figures can be attributed to shipment fluctuations. Spectrum sales were steady and Sprint's were up for the month.

Similarly, Isuzu's big decrease in its auto days-supply level is attributed only to shipments; its sales stayed nearly even.

Nissan's big car-supply drop was due to a big decrease in inventories and a moderate increase in sales.

In the truck segment, sales for Isuzu, Mitsubishi, Mazda, Nissan and the Chrysler Ram 50 increased significantly, slicing their days-supply figures.

There was a 23-day supply of Japanese cars on Oct. 1. By line: Sprint, 240; Spectrum, 69; Isuzu, 59; Chrysler captives, 48; Mitsubishi, 20; Nissan, 19; Subaru, 19; Mazda, 15; Honda imports, 13, and Toyota, 13.

German cars averaged a 49-day supply: Audi, 67; BMW, 63; Porsche, 54; Merkur, 45; VW imports, 43, and Mercedes-Benz, 28.

The average for cars from other countries was a 61-day supply: Renault imports, 272; Peugeot, 68; Volvo, 59; Jaguar, 56; Alfa Romeo, 28, and Saab, 26.

Bus maker looks for site

LONDON.—Hungarian bus maker Ikarus is reported to be looking for an assembly site at one of the U.K.'s recently opened Free Ports.

Key economic and non-economic issues involved

Strike costs Chrysler millions daily

Continued from Page 1

joyed by employes of our major competitors," Miner said.

Added Miner, "We were working out job security provisions with the union when this broke off. It isn't as though we were miles apart on job security."

Chrysler asked the UAW to extend the talks beyond the contract expiration, Miner said.

Bieber said "no useful purpose would have been served" by such an extension. He also noted that in some locations, UAW members had walked out in advance of the midnight deadline. The wildcat walkouts occured at Chrysler's assembly plants in Detroit; Warren, Mich., and St. Louis.

At presstime, the two sides had not detailed progress in the negotiations which resumed Wednesday morning after the strike began.

"We are still apart on a number of very key issues," Bieber said after 15 hours of bargaining Thursday. "We've worked very hard, and we're just not there."

Wednesday afternoon, Bieber said that "some very tough issues" remained outstanding, including job security.

However, Bieber also said there were "a number of major issues that are not totally resolved but that we've come much closer to reaching a final resolve on." He would not detail those issues.

Noting that Chrysler hoped for a short strike, Miner said, "We bleed to death when we're on strike. This whole company is paralyzed as of midnight (Wednesday). The money we need for the future to build new products and provide job security is going down the tube."

Analysts estimate the strike costs Chrysler $10 million to $15 million per day. The longer the strike lingers on, the higher the per-day price tag rises. If it is a short strike, production can be made up and earnings for the quarter and the year will not be affected.

Meanwhile in Canada, the Canadian UAW said early Friday that no progress had been made since the strike began simultaneously with the U.S. The newly independent Canadian UAW is negotiating its first contract for 10,000 members at four plants.

Subcommittee meetings, but no main table discussions, were scheduled Thursday and Friday, the UAW said.

According to the UAW, major economic and non-economic issues remained unresolved, including apparently the complex issue of job classifications.

Chrysler's key objective in both countries is the reduction of the more than 500 current job classifications. The company claims fewer and more flexible work rules and classifications will yield greater manufacturing productivity.

In Canada, the UAW's chief demand is wage parity with Canadian workers at GM and Ford.

Chrysler's job classification and chief economic proposals had been modified at the time of the strike, said Chrysler Canada chief negotiator William J. Fisher.

A Chrysler spokesman said Friday that "we've already given them parity."

Local agreements also remained a sticking point in Canada. Under Canadian law, settlement of local agreements must precede signing of a national agreement.

Fisher said local pacts covering workers in smaller plants in Ajax, Ont., and Etobicoke, Ont., have been settled. However, "in-plant issues" were impeding settlement of the local contracts at the two Chrysler plants in Windsor.

A Canadian general membership meeting scheduled for Sunday was postponed Friday to work throughout the weekend if needed.

If a tentative settlement is reached and the contracts are ratified, workers could return to work immediately.

In the U.S., the National UAW-Chrysler Council reviews the tentative agreement but is not required to approve it prior to submittal to the general membership.

A UAW spokesman said a one-day ratification process is possible at Chrysler plants and locals.

A meeting of the Chrysler council was scheduled Saturday in Huntsville, Ala.

UAW officials Friday said the meeting would be held even if a tentative agreement was not reached. There was no indication how soon negotiations would resume.

Last week's strike against Chrysler in the U.S. was the first since 1973. Canadian Chrysler workers struck for five weeks in 1982.

Joe Wilssens

Night of gloom

Owen Bieber's face shows strain and disappointment as the UAW president announces that the strike against Chrysler Corp. has begun. It involves 70,000 workers in the U.S. Another 10,000, represented by the Canadian UAW, also went on strike against Chrysler.

Iacocca's new column spurs talk of presidential potential

Continued from Page 2

edly convinced Iacocca to do the articles. Iacocca also has been approached by other newspaper syndicates to do a column.

"It's brilliant PR," said John Casey, president of MG and Casey Communications Inc., a Detroit-area public relations firm specializing in handling public issues. The firm has worked on several Democratic political campaigns, including a presidential race.

"It gives him a forum to talk about different issues than we are used to hearing," Casey said. "It's from a safe haven, a kind of test to see if it works. It lets the public know him as multi-dimensional."

Yet it is Iacocca's outspokenness that is expected to ultimately generate some backlash. "Your popularity decreases when you get into different issues," Casey said. "Anything—you name it. Nicaragua. Farm supports. Aid to the cities."

According to Schwartz, the paper was interested in Iacocca as a followup to a series by Henry Kissinger, a popular feature that demonstrated an interest in "big-name" opinion pieces.

About 100 U.S. and 20 overseas newspapers are carrying the series, Schwartz said—figures which could mean that syndication fees for the eight articles (which Iacocca says he will donate to charity) could reach the "ballpark" of $300,000.

Details of the Newsweek articles are still being negotiated, said a spokesman for the magazine. Iacocca is expected to contribute two pieces on agreed-on topics. The Newsweek series would be a sequel to his recent appearance on Time's cover.

"He's a creature of the television era," said Casey about the Iacocca media phenomenon. "Maybe Henry Ford II could have done it, but he wouldn't. Iacocca craves attention and approval—you can see that in his book. That's part of what drives him."

UAW members to get payout on Chrysler stock

HIGHLAND PARK, Mich.—UAW President Owen Bieber said UAW-Chrysler members in both the U.S. and Canada will be permitted to receive their Chrysler stock entitlements either in actual shares or their cash value in a few months when the necessary arrangements are cleared with the U.S. Government.

Bieber said the current contract talks "afforded an opportunity to work out options that our members have clearly indicated they want with respect to the employe stock ownership plan (ESOP)."

The UAW obtained an ESOP at Chrysler as part of the federal loan guarantee legislation enacted in 1979. Because Canadians chose not to participate in all phases of the Chrysler rescue process, U.S. UAW members have a greater entitlement than their Canadian counterparts.

A U.S. UAW-Chrysler worker who was on the employment rolls during all four years in which shares were distributed now has 183 shares of Chrysler common worth more than $6,900 at the Oct. 14 price. The maximum distribution for Canadians under the ESOP is 139 shares worth more than $5,200 (U.S.).

Bieber noted that since the program was established under U.S. law, this new opportunity had to be worked out here both for U.S. and Canadian workers.

Bieber said Chrysler members will be able to decide early next year to take their entitlement in either shares or cash. A program also will be developed to secure the maximum advantage for each member with respect to tax liability, reinvestment, etc.

Currently, UAW-Chrysler members can recieve their ESOP entitlement only when their Chrysler employment is terminated.

But not as much as GM strike a year ago

Chrysler strike cuts auto output

With Chrysler Corp. plants on strike, last week's scheduled auto production of 160,974 units fell 7.37 percent from the previous week's 173,785.

The strike began at midnight Oct. 16, and production had not been resumed at presstime.

But the auto makers' scheduled output last week was 4.97 percent better than the 153,352 cars built during the year-ago week, when the Canadian strike against General Motors caused slowdowns in the company's plants in the U.S.

Chrysler's estimated build of 10,000 units was 66.59 percent below the 29,935 cars assembled by the company during the previous week.

So far this year, 6,690,790 cars have been produced, 4.93 percent more than the 6,376,382 completed last year at this point.

Companies accounted for last week's scheduled production as follows: GM, 65.19 percent; Ford Motor Co., 21.53 percent; Chrysler, 6.21 percent; Honda of America Mfg. Co., 1.82 percent; Volkswagen of America, 1.46 percent; American Motors, 1.71 percent; New United Motor Mfg., Inc., 1.18 percent, and Nissan Motor Mfg. Co., U.S.A., 0.90 percent.

Saturday (Oct. 19) overtime was scheduled at GM plants in Arlington, Tex.; Doraville, Ga.; Lakewood, Ga.; Janesville, Wis.; Lordstown, O., and Clark Ave. (Detroit).

Ford has scheduled daily overtime this week (Oct. 21) at the following plants: Chicago; Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Ford plants in Dearborn, Edison, Lorain, Kansas City and Wayne are slated for overtime this Saturday (Oct. 26).

Ford's Atlanta plant, which started assembling the new Taurus and Sable models on Oct. 14, reported production of 200 Taurus and 88 Sable cars last week.

Ford LTD and Mercury Marquis, formerly produced in Atlanta, are now being built in Chicago.

Rental firm to pay $1,500 to buyers of rollback cars

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—A local car-rental firm will pay 108 customers $1,500 each as a result of the firm and its president pleading guilty to federal charges of odometer tampering.

The settlement results from a $291,600 consumer fraud suit filed by the State of Virginia against Corporate Fleet Management, which manages Americar Rental Systems outlets in Virginia, the District of Columbia and Maryland.

The state asked for the award on behalf of consumers who bought from Americar Rental Systems vehicles whose odometers had been altered. Terms of the agreement were worked out between the Virginia attorney general's office and Corporate Fleet Management, with the approval of U.S. District Judge Albert V. Bryan Jr.

Earlier this year, Corporate Fleet Management and its president, Richard J. Gillis, pleaded guilty under a plea-bargain agreement to six misdemeanor counts of odometer tampering, mail fraud and obstruction of justice. That arrangement required Gillis to serve a 75-day jail term and pay a $115,000 fine. His company was fined $54,000.

In addition to the $1,500 awarded consumers under the consent decree, the settlement of the consumer suit also requires Americar to sponsor an educational program on federal odometer tampering laws for its employes and to explain that failure to comply with the consent decree would mean dismissal or disciplinary action for affected employes.

The firm will also be required to display a notice "of its policy of nontampering with odometers" on its car-rental properties, to be accompanied by a sample odometer disclosure form. Federal law requires that such a form accompany the sale of every used car.

Chrysler strike cuts truck build by 8.47 percent

Domestic makers' estimated production of 70,315 trucks last week fell 8.47 percent from the previous week's 76,826, due to the strike at Chrysler Corp.

Last week's was the lowest scheduled truck build since the Labor Day week when 61,305 units were assembled.

But last week's targeted output was 5.77 percent more than the 66,480 trucks built during the year-ago week, when a General Motors strike in Canada affected production in the U.S.

So far this year, 2,802,539 trucks have been assembled, 10.81 percent more than the 2,529,227 units completed last year at this point.

GM scheduled overtime Saturday (Oct. 19) at its plants in St. Louis and Lordstown, O.

Ford Motor Co. plants in Kansas City; Louisville; Lorain, O.; Wayne, Mich., and Norfolk are scheduled for daily overtime this week (Oct. 21).

Overtime is scheduled for next Saturday (Oct. 26) at Ford's Kansas City, Lorain and Louisville plants.

Canadian trucks decline 39 pct. as strike hits

The Chrysler Corp. strike (which began Oct. 16) and the Thanksgiving holiday cut last week's estimated Canadian truck output to 10,556 units, down 38.57 percent from the previous week's 17,183.

The strike had not been settled at presstime.

Last week's scheduled truck build was the lowest since mid-August when production fell to 10,240 units due to model changeovers and vacations.

Last week's estimate was 26.26 percent less than the year-ago week's 14,315.

That total reflected the strike against General Motors which was in progress last year at this time.

Year-to-date, 686,294 trucks have been assembled, 5.31 percent more than the 651,674 units built last year at this point.

Scheduled output of 19,376 cars in Canada last week was down 21.27 percent from the previous week's 24,610 due to the Thanksgiving holiday. Chrysler does not build cars in Canada.

Last week's estimate was 24.28 percent more than the year-ago week's 15,590.

So far this year, 855,619 cars have been assembled, slightly above (0.24 percent) the 853,568 units completed last year at this point.

Independent dealers slate joint convention

TOWSON, Md.—The Maryland Independent Automobile Dealers Assn. and the Delaware Independent Automobile Dealers Assn. have scheduled a joint annual convention for Oct. 25-27.

The convention will be held at the Crowne Plaza, Rockville, Md.
